Trademarks

The following trademarks are used in this document:

- Microsoft is a registered trademark of Microsoft Corp.
- Windows 8, 10 and Explorer are trademarks of Microsoft Corp.
- Apple and Mac OS are registered trademarks of Apple Inc.
- Other products may be trademarks or registered trademarks of their respective manufacturers.

Safety Instructions

- Read the installation guide thoroughly before you set up the router.
- The router is a complicated electronic unit that may be repaired only by authorized and qualified personnel. Do not try to open or repair the router yourself.
- Do not place the router in a damp or humid place, e.g. a bathroom.
- The router should be used in a sheltered area, within a temperature range of +5 to +40 Celsius.
- Do not expose the router to direct sunlight or other heat sources. The housing and electronic components may be damaged by direct sunlight or heat sources.
- Do not deploy the cable for LAN connection outdoor to prevent electronic shock hazards.
- Keep the package out of reach of children.
- When you want to dispose of the router, please follow local regulations on conservation of the environment.

Warranty

- We warrant to the original end user (purchaser) that the router will be free from any defects in workmanship or materials for a period of two (2) years from the date of purchase from the dealer. Please keep your purchase receipt in a safe place as it serves as proof of date of purchase. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, we will, at our discretion, repair or replace the defective products or components, without charge for either parts or labor, to whatever extent we deem necessary to restore the product to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal value, and will be offered solely at our discretion. This warranty will not apply if the product is modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions. The warranty does not cover the bundled or licensed software of other vendors. Defects which do not significantly affect the usability of the product will not be covered by the warranty. We reserve the right to revise the manual and online documentation and to make changes from time to time in the contents hereof without obligation to notify any person of such revision or changes.

Be a Registered Owner

- Web registration is preferred. You can register your Vigor router via <http://www.DrayTek.com>.

Firmware & Tools Updates

- Due to the continuous evolution of DrayTek technology, all routers will be regularly upgraded. Please consult the DrayTek web site for more information on newest firmware, tools and documents.

Part I Installation

Installation

This part will introduce Vigor router and guide to install the device in hardware and software.

I-1 Introduction

This is a generic International version of the user guide. Specification, compatibility and features vary by region. For specific user guides suitable for your region or product, please contact local distributor.

The Vigor2962 Series integrates a rich suite of functions, including NAT, firewall, VPN, load balance, and bandwidth management capability. These products are very suitable for providing multi-integrated solutions to SME markets.

A Virtual Private Network (VPN) is an extension of a private network that encompasses links across shared or public networks like an Intranet. A VPN enables you to send data between two computers across a shared public Internet network in a manner that emulates the properties of a point-to-point private link. The DrayTek Vigor2962 Series VPN router supports Internet-industry standards technology to provide customers with open, interoperable VPN solutions such as X.509, DHCP over Internet Protocol Security (IPsec), and Point-to-Point Tunneling Protocol (PPTP).

I-1-1 Indicators and Connectors

Before you use the Vigor router, please get acquainted with the LED indicators and connectors first.

LED		Status	Explanation
ACT		Blinking	The router is powered on and running normally.
		Off	The router is powered off.
SFP		On	The fiber connection is established.
		Blinking	The data is transmitting.
		Off	No fiber connection is established or the system is hanged.
USB		On	The USB device is installed and ready.
		Off	No USB device is installed.
MSG		On / Off / Blinking	MSG means this LED is user-defined. It will be on / off / blinking according to the rule defined on WUI.
PoE (for 2962P)		On	Power sourcing equipment for PoE is enabled.
		Off	Power sourcing equipment for PoE is disabled.
P1, P4, P5, P6 (for 2962P)		On	A PoE equipment is connected to port P1, P4, P5 or P6.
		Off	No PoE equipment connected.
P1	Left	On	The Ethernet link is established.
		Off	No Ethernet link is established.
		Blinking	The data is transmitting.
	Right	On	The Ethernet link is established with 1/2.5Gbps.
		Off	The Ethernet link is established with less than 1Gbps.
		Blinking	The data is transmitting.
P2 (Right) ~P6	Left	On	The Ethernet link is established on corresponding port.
		Off	No Ethernet link is established.
		Blinking	The data is transmitting.
	Right	On	The Ethernet link is established on corresponding port with 1Gbps.
		Off	The Ethernet link is established on corresponding port with less than 1Gbps.
		Blinking	The data is transmitting.

Interface	Description
Reset	The Factory Reset button is used to restore the default settings. Turn on the router (ACT LED is blinking). Press the hole and keep for more than 5 seconds. When you see the ACT LED begins to blink rapidly than usual, release the button. Then the router will restart with the factory default configuration.
P1	Connector for local network devices (LAN) or a modem for accessing Internet (WAN).
P2 (Left)	Connector for SFP module with the rate of 1G bps.
P2 (Right)~P4	Connectors for remote network devices or local network devices (WAN/LAN) with the rate of 1G/100M/10M bps. Or connector for a modem for accessing Internet (WAN).
P5~P6	Connectors for local network devices (LAN) with the rate of 1G/100M/10M bps.
USB1~2	Connector for the USB device.
	Connector for a power cord. ON/OFF - Power switch.

Info 1

P1 to P4 port can be configurable as WAN / LAN interface. At least, up to two of them can be set as the WAN port at one time.

For Vigor2962P, P1, P4, P5 and P6 also can be connected by PoE equipments.

Info 2

The PoE Power budget is up to 60W.

I-2 Hardware Installation

I-2-1 Installing Vigor Router

Before starting to configure the router, you have to connect your devices correctly. (For the hardware connection, we take “ac” model as an example.)

1. Connect a modem to any WAN port of Vigor2962 with Ethernet cable (RJ-45) to access Internet.
2. Connect the other end of the cable (RJ-45) to the Ethernet port on your computer (that device also can connect to other computers to form a small area network). The LAN LED for that port on the front panel will light up.
3. Connect the power cord to Vigor2962's power port on the rear panel, and the other side into a wall outlet.
4. Power on the device by pressing down the power switch on the rear panel. The PWR LED should be ON.
5. The system starts to initiate. After completing the system test, the ACT LED will light up and start blinking.

Below shows an outline of the hardware installation for your reference.

I-2-2 Wall-Mounted Installation

The Vigor2962 Series can be mounted on the shelf or on the wall by using standard brackets shown below.

Here we take mounted on the wall as an example.

Choose a flat surface (on the wall) which is suitable for placing the router. Make the screw holes on the short side of the bracket aim at the screw holes on the router. Next, fasten both the bracket and the router with two screws; and fasten both the wall and the bracket with another two screws. Refer to the following figure.

Then, continue to fasten the screws on the other side of the router and the wall with other screws.

When you finished about procedure, the router has been mounted on the wall firmly.

I-3 Accessing Web Page

1. Make sure your PC connects to the router correctly.

You may either simply set up your computer to get IP dynamically from the router or set up the IP address of the computer to be the same subnet as **the default IP address of Vigor router 192.168.1.1**. For the detailed information, please refer to the later section - Trouble Shooting of the guide.

2. Open a web browser on your PC and type **http://192.168.1.1**. The following window will be open to ask for username and password.

The image shows the login page of a DrayTek Vigor2962 router. On the left, the DrayTek logo is displayed in red, with 'Vigor2962' written below it in a smaller red font. On the right, there are two input fields: 'Username' with 'admin' entered, and 'Password' with '*****' entered. Below these fields is a red 'Login' button. The entire page has a white background with a subtle shadow effect.

Copyright © 2000-2020 DrayTek Corp. All Rights Reserved.

3. Please type “admin/admin” as the Username/Password and click **Login**.

Info

If you fail to access to the web configuration, please go to “Trouble Shooting” for detecting and solving your problem.

4. Now, the **Main Screen** will appear. Take Vigor2962 as an example.

Info

The home page will be different slightly in accordance with the type of the router you have.

5. The web page can be logged out according to the chosen condition. The default setting is **Auto Logout**, which means the web configuration system will logout after 5 minutes without any operation. Change the setting for your necessity.

I-4 Changing Password

Please change the password for the original security of the router.

1. Open a web browser on your PC and type **http://192.168.1.1**. A pop-up window will open to ask for username and password.
2. Please type "admin/admin" as Username/Password for accessing into the web user interface with admin mode.
3. Go to **System Maintenance** page and choose **Administrator Password**.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	Max: 83 characters		
New Password	Max: 83 characters		
Confirm Password	Max: 83 characters		
☒ Enable 'admin' account login to Web UI from the Internet			
☐ Use only advanced authentication method for Admin "WAN" login			
☒ Mobile one-Time Passwords(mOTP)			
PIN Code		Secret	
*****		*****	
☐ 2-Step Authentication			
Send Auth code via			
☐ SMS Profile	1 - ???	Recipient Number	
☐ Mail Profile	1 - ???	Mail Address	

Note:

Password can contain only a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()

Administrator Local User

☐ Enable Local User			
☐ Use only advanced authentication method for Admin "WAN" login			
Local User List			
Index	User Name	Type	Destination

4. Enter the login password (the default is "admin") on the field of **Old Password**. Type **New Password** and **Confirm Password**. Then click **OK** to continue.

Info

The maximum length of the password you can set is 23 characters.

- Now, the password has been changed. Next time, use the new password to access the Web user interface for this router.

Info

Even the password is changed, the Username for logging onto the web user interface is still “admin”.

I-5 Dashboard

The Dashboard provides a convenient way to monitor the current status of the router, including firmware version, system resource usage, LAN and WAN connection uptimes, and interface usage. It is refreshed every 5 seconds with the latest information.

For the Dashboard is the landing page after logging into the web configuration utility, you can also bring up the Dashboard by clicking on the Dashboard on the menu bar.

The figure below shows the Dashboard of the Vigor2962. The Dashboards of other Vigor2962 models are may vary slightly due to differences in features.

Dashboard

The System Information section displays general information about the router, such as system uptime, current time, firmware version, LAN MAC Address and so on.

The IPv4 Internet Access section shows the IPv4 connection status of the WAN ports, including their access modes, IP addresses, MAC addresses and uptimes.

The IPv6 Internet Access section shows the IPv6 connection status of the WAN port that has IPv6 enabled. Unlike IPv4, IPv6 support is limited to one WAN port at a time, so there is always at most one IPv6 WAN connection shown.

The Interface section shows the physical connection status of the WAN and LAN interfaces.

The Security section shows the states of the security-related features, including VPN, MyVigor and DoS.

Router Name, Current Time, LAN#, WAN# will bring the configuration page for modification. Simply move the mouse cursor on these items to access the web pages.

I-5-1 Virtual Panel

At the top of the Dashboard page is the Virtual Panel, a graphical simulation of the front panel of the router.

The WAN and LAN connectors are shaded with various colours to indicate their status at any given point in time.

Port	Color	Description
WAN#	Black	WAN port is disconnected.
	Green	WAN port is connected at 1 Gbps.
	Orange	WAN port is connected at 10/100 Mbps.
P1 ~ P6 (LAN)	Black	LAN port is disconnected.
	Green	LAN port is connected at 1 Gbps.
	Orange	LAN port is connected at 10/100 Mbps.
USB	Black	No USB device is connected.
	Green	A USB device is connected.

For detailed information about the LED display, refer to **I-1-1 LED Indicators and Connectors**.

I-5-2 Quick Access for Common Used Menu

All the menu items can be accessed and arranged orderly on the left side of the main page for your request. For your convenience, some of the most-frequently-used items in the Web Configuration Utility are listed under the Quick Access section on the Dashboard.

Look at the right side of the Dashboard. You will find a group of common used functions grouped under **Quick Access**.

Quick Access
System Status
Dynamic DNS
TR-069
User Management
IM/P2P Block
Schedule
SysLog / Mail Alert
LDAP
RADIUS
Firewall Object Setting
Data Flow Monitor

Move your mouse cursor on any one of the links and click on it. The corresponding setting page will be open immediately.

Hyperlink	Destination
System Status	System Maintenance >> System Status
Dynamic DNS	Applications >> Dynamic DNS Setup
TR-069	System Maintenance >> TR-069 Setting
User Management	User Management >> User Profile
IM/P2P Block	CSM >> APP Enforcement Profile
Schedule	Applications >> Schedule
SysLog / Mail Alert	System Maintenance >> SysLog / Mail Alert Setup
LDAP	Applications >> Active Directory /LDAP
RADIUS	Applications >> RADIUS/TACACS+
Firewall Object Setting	Objects Setting >> IP Object
Data Flow Monitor	Diagnostics >> Data Flow Monitor

In addition, quick access for VPN security settings such as **Remote Dial-in User** and **LAN to LAN** are located on the bottom of this page. Scroll down the page to find them and use them if required.

MyVigor	Activate : 0	

Host connected physically to the router via LAN port(s) will be displayed with green circles in the field of Connected.

All of the hosts (including wireless clients) displayed with Host ID, IP Address and MAC address indicates that the traffic would be transmitted through LAN port(s) and then the WAN port. The purpose is to perform the traffic monitor of the host(s).

I-5-3 GUI Map

All the functions the router supports are listed with table clearly in this page. Users can click the function link to access into the setting page of the function for detailed configuration. Click the icon on the top of the main screen to display all the functions.

GUI Map

I-5-4 Web Console

It is not necessary to use the telnet command via DOS prompt. The changes made by using web console have the same effects as modified through web user interface. The functions/settings modified under Web Console also can be reviewed on the web user interface.

Click the **Web Console** icon on the top of the main screen to open the following screen.

I-5-5 Config Backup

There is one way to store current used settings quickly by clicking the **Config Backup** icon. It allows you to backup current settings as a file. Such configuration file can be restored by using **System Maintenance>>Configuration Backup**.

I-5-6 Logout

Click this icon to exit the web user interface.

I-5-7 Online Status

I-5-7-1 Physical Connection

The Physical Connection page displays the status of all the physical network interfaces, including LAN and WAN.

The information shown for every interface can be in green, indicating the interface is enabled and online; or red, indicating the interface is either disabled or offline.

Physical Connection for IPv4 Protocol

This IPv4 tab displays IPv4 related information of all the LAN and WAN interfaces.

Online Status

Physical Connection				System Uptime: 2days 23:21:10		
IPv4		IPv6				
LAN Status						
IP Address	TX Packets		RX Packets		Router Primary DNS:	Router Secondary DNS:
192.168.1.1	201,030		79,214		8.8.8.8	8.8.4.4
WAN 1 Status						>> Renew
Enable	Line	Name	Mode	Up Time		
Yes	Ethernet		DHCP Client	00:00:00		
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	0	0	0	0	
WAN 2 Status						>> Renew
Enable	Line	Name	Mode	Up Time		
Yes	Ethernet		DHCP Client	00:00:00		
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)	
---	---	1,854	0	3,383	0	

Detailed explanation (for IPv4) is shown below:

Item	Description
LAN Status	IP Address -Displays the IP address of the LAN interface. TX Packets -Displays the total transmitted packets at the LAN interface. RX Packets -Displays the total received packets at the LAN interface. Primary DNS -Displays the primary DNS server address for WAN interface. Secondary DNS -Displays the secondary DNS server address for WAN interface.
WAN# Status	Enable - Yes in red means such interface is available but not enabled. Yes in green means such interface is enabled. Line - Displays the physical connection (VDSL, ADSL,

Item	Description
	Ethernet, or USB) of this interface. Name - Display the name of the router. Mode - Displays the type of WAN connection (e.g., PPPoE). Up Time - Displays the total uptime of the interface. IP - Displays the IP address of the WAN interface. GW IP - Displays the IP address of the default gateway. TX Packets - Displays the total transmitted packets at the WAN interface. TX Rate - Displays the speed of transmitted octets at the WAN interface. RX Packets - Displays the total number of received packets at the WAN interface. RX Rate - Displays the speed of received octets at the WAN interface.

Physical Connection for IPv6 Protocol

This IPv6 tab displays IPv6 related information of all the LAN and WAN interfaces.

Online Status

Physical Connection		System Uptime: 2days 23:22:10	
IPv4		IPv6	
LAN Status			
IP Address			
FE80::1649:BCFF:FE0D:1F48/64 (Link)			
TX Packets		RX Packets	
1,114		259	
TX Bytes		RX Bytes	
86,908		26,354	
WAN1 IPv6 Status			
Enable		Mode	
No		Offline	
Up Time			

IP		Gateway IP	
---		---	
WAN2 IPv6 Status			
Enable		Mode	
No		Offline	
Up Time			

IP		Gateway IP	
---		---	

Detailed explanation (for IPv6) is shown below:

Item	Description
LAN Status	IP Address- Displays the IPv6 address of the LAN interface.. TX Packets-Displays the total transmitted packets at the LAN interface. RX Packets-Displays the total received packets at the LAN interface. TX Bytes - Displays the speed of transmitted octets at the LAN interface. RX Bytes - Displays the speed of received octets at the LAN interface.
WAN# IPv6 Status	Enable - No in red means such interface is available but not enabled. Yes in green means such interface is enabled. No in

Item	Description
	red means such interface is not available. Mode - Displays the type of WAN connection (e.g., TSPC). Up Time - Displays the total uptime of the interface. IP - Displays the IP address of the WAN interface. Gateway IP - Displays the IP address of the default gateway.

Info

The words in green mean that the WAN connection of that interface is ready for accessing Internet; the words in red mean that the WAN connection of that interface is not ready for accessing Internet.

I-5-7-2 Virtual WAN

The Virtual WAN screen displays the status of the virtual WAN interfaces.

Virtual WAN are used by TR-069 management, VoIP service and so on.

The field of Application will list the purpose of such WAN connection.

Online Status

Virtual WAN						System Uptime: 2days 23:26:39
WAN 8 Status						
Enable	Line	Name	Mode	Up Time	Application	
Yes	Ethernet		---	00:00:00		
IP	GW IP	TX Packets	TX Rate(bps)	RX Packets	RX Rate(bps)	
---	---	0	0	0	0	
WAN 9 Status						
Enable	Line	Name	Mode	Up Time	Application	
Yes	Ethernet		---	00:00:00		
IP	GW IP	TX Packets	TX Rate(bps)	RX Packets	RX Rate(bps)	
---	---	0	0	0	0	

Detailed explanation is shown below:

Item	Description
Enable	Yes- Virtual WAN interface is enabled. No- Virtual WAN interface is disabled.
Line	The WAN port and connection mode used for this virtual WAN. ADSL- ADSL mode on WAN1. VDSL- VDSL mode on WAN1. Ethernet(WAN2)- The Ethernet WAN2 port is used for this
Name	The IPv6 addresses of the WAN interface. The global address is routable whereas the link local address is for LAN use only.
Mode	Gateway address of the IPv6 WAN connection.
Up Time	Yes: IPv6 support on the WAN interface is enabled. No: IPv6 support on the WAN interface is disabled.
Application	The IPv6 access mode, which can be one of Offline, PPP, TSPC, AICCU, DHCPv6 Client, Static IPv6, 6in4 Static Tunnel, and 6rd.
IP	The IPv6 addresses of the WAN interface. The global address

Item	Description
	is routable whereas the link local address is for LAN use only.
GW IP	Gateway address of the IPv6 WAN connection.
TX Packets	Total number of IPv6 packets leaving the WAN interface.
TX Rate(Bps)	The speed of transmitted octets.
RX Packets	Total number of IPv6 packets received by the WAN interface.
RX Rate(Bps)	The speed of received octets.

I-6 Port Setup

This page is used for configuring transmission rate for LAN and WAN ports respectively.

Port Setup

Port	P1	P2	P3	P4	P5	P6
Function	WAN	WAN	LAN	LAN	LAN	LAN
Speed	Auto	SFP 1G	Ethernet Auto	Auto	Auto	Auto

OK

Available settings are explained as follows:

Item	Description
Port	Display the physical ports on Vigor router.
Function	P1 ~ P4 - These ports are switchable between WAN and LAN ports. Up to two of interfaces can be set as the WAN port at one time.
Speed	Transmission rate choices for P1 to P6 include: • Auto • 1G • 100M • 10M The difference is that P1 is additionally supported with a 2.5G transmission rate. In addition, the SFP module (P2) is specified to the speed of 1G.

I-7 Quick Setup

To register your Vigor router to MyVigor website for getting more service, please follow the steps below to finish the router registration.

1. Open **WAN>>Internet Access**. Click Details Page of WAN1/WAN2.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode / Port	Access Mode		
WAN1		Ethernet / P1	Static or Dynamic IP	Details Page	IPv6
WAN2		Ethernet / P2	Static or Dynamic IP	Details Page	IPv6

DHCP Client Option

Here, we take WAN1 as an example.

There are two access modes for you to configure. Choose **PPPoE**, **Static or Dynamic IP** according to the access mode offered by your ISP.

PPPoE

1. Click **Details Page** of WAN1. When the following page appears, choose **PPPoE**.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6
☒ Enable ☐ Disable		
ISP Access Setup		
Username Max: 63 characters		
Password Max: 62 characters		
More Options		
PPPoE Pass-through¹		
☐ For Wired LAN		
WAN Connection Detection		
Mode PPP Detect		
MTU		
1492 (Max: 1492) Path MTU Discovery		
PPP/MP Setup		
PPP Authentication PAP or CHAP		
Idle Timeout -1 second(s)		
IP Assignment (IPCP) ☐ Static ☒ Dynamic		
Fixed IP Address		
WAN IP Alias		
Dial-Out Schedule		
Index(1-15) in Schedule Setup:		
None => None		
=> None => None		
TTL		
☒ Change the TTL value		
☒ Default MAC Address		
☐ Use the following MAC Address		
14 : 49 : BC : 0B : 15 : 89		

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

2. After clicking **Enable** and entering the Username/Password provided by your ISP, click **OK** to get the following page.

System Maintenance >> Reboot System

Reboot System

The router needs to be rebooted for the WAN configuration changes to take effect.

OK

3. To reboot the system, click **OK** again.

System Maintenance >> Reboot System

Reboot System

Router is restarting. Please wait for around **10 seconds**. After booting router, you could click the following URL
LAN 1: <http://192.168.1.1:80>
to connect to router's homepage again.

4. Later, Vigor system will reboot. Please login Vigor router again.

The image shows the login page of a DrayTek Vigor2962 router. On the left, the DrayTek logo is displayed in red, with 'Vigor2962' written below it in a smaller red font. On the right, there are two input fields: 'Username' with 'admin' entered, and 'Password' with '*****' entered. Below these fields is a red 'Login' button. The background is white.

Copyright © 2000-2020 DrayTek Corp. All Rights Reserved.

5. Then, you can enjoy surfing on the Internet.

DHCP

1. Click **Details Page** of WAN1. When the following page appears, choose **Static or Dynamic IP**.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6
☒ Enable ☐ Disable

☒ Change the TTL value		
RIP Routing		
☐ Enable RIP		
Bridge Mode		
☐ Enable Bridge Mode		
Bridge Subnet LAN 1		
MAC Address		
☒ Default MAC Address		
☐ Use the following MAC Address		
14 : 49 : BC : 0B : 15 : 89		

Note:

1. VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.
2. If enable firewall in bridge mode, IPv6 connection type would be change to DHCPv6 mode.
3. Bridge Subnet cannot be selected by Multi-WAN Interface at the same time.
4. If both Bridge Mode and Firewall are enabled, the settings under User Management will be ignored.

2. After clicking **Enable**, select **Obtain an IP address automatically**. Click **OK** to get the following page.

System Maintenance >> Reboot System

Reboot System

The router needs to be rebooted for the WAN configuration changes to take effect.

OK

3. To reboot the system, click **OK** again.

System Maintenance >> Reboot System

Reboot System

Router is restarting. Please wait for around **10 seconds**. After booting router, you could click the following URL

LAN 1 : <http://192.168.1.1:80>

to connect to router's homepage again.

4. Later, Vigor system will reboot. Please login Vigor router again.

The image shows the login interface for a DrayTek Vigor2962 router. On the left, the DrayTek logo is displayed in red, with 'Vigor2962' written below it in a smaller red font. On the right, there are two input fields: 'Username' with the text 'admin' entered, and 'Password' with four dots (****) entered. Below these fields is a red rectangular button labeled 'Login' in white text.

5. Then, you can enjoy surfing on the Internet.

I-8 Registering Vigor Router

To register your Vigor router to MyVigor website for getting more service, please follow the steps below to finish the router registration.

- 1 Please login the web configuration interface of Vigor router by typing “**admin/admin**” as User Name / Password.

The image shows the login page of a DrayTek Vigor2962 router. On the left, the DrayTek logo is displayed in red, with 'Vigor2962' written below it in a smaller red font. On the right, there is a login form with two input fields: 'Username' and 'Password'. The 'Username' field contains the text 'admin'. The 'Password' field contains five dots. Below the password field is a red 'Login' button. At the bottom of the page, there is a small copyright notice: 'Copyright © 2000-2020 DrayTek Corp. All Rights Reserved.'

- 2 Click **Support Area>>Production Registration** from the home page.

The image shows a button with the text 'Support Area' and 'Product Registration' stacked vertically. The button has a grey background and a slight shadow.

- 3 A **Login** page will be shown on the screen. Please Enter the account and password that you created previously. And click **Login**.

Info

If you haven't an accessing account, please refer to section Creating an Account for MyVigor to create your own one. Please read the articles on the Agreement regarding user rights carefully while creating a user account.

- 4 The following page will be displayed after you logging in MyVigor. Type a nickname for the router, then click **Add**.

- 5 When the following page appears, your router information has been added to the database.

Your device has been successfully added to the database.

- 6 After clicking **OK**, you will see the following page. Your router has been registered to myvigor website successfully.

The screenshot displays the DrayTek MyVigor web interface. The top navigation bar includes the DrayTek logo, a login user field (yhtsui), and a logout button. The main content area is titled "My Information - My Products". A red box highlights the "Device Information" section, which shows:

- Device Name: Vigor2962
- Serial Number: 2020101210301001
- Model: Vigor2962 Series

Below this, there are tabs for "Device's Service" and "Expired License". The "Device's Service" tab is active, showing a table of services:

Service	Provider	Action	Status	Start Date	Expired Date	Note
WCF	BPM	Renew	On	2020-10-12	2021-10-12	-
BAPPE	DT-APPE	Renew	On	2020-10-12	2021-10-12	-
DDNS	DT DDNS	Renew	On	2020-10-12	2021-10-12	Edit DDNS settings

Below the table, there is a note: "After the trial period, contact your local DrayTek dealer/distributor for purchasing the formal edition of WCF service." This is followed by a table comparing three service providers: Cyren | Commtouch, BPM, and fragFINN.

	Cyren Commtouch	BPM	fragFINN
Type [blacklist/whitelist]	Blacklist [customer can choose category to block/pass.]	Blacklist [some predefined website will be blocked. Others will be passed.]	Whitelist [only some predefined website pass, others will be blocked.]
Region	Global	All German speaking countries	All German speaking countries
Website	http://www.cyren.com/	http://www.bundespruefstelle.de/	http://www.fragfinn.de

The footer of the page includes the copyright notice: "Copyrights © DrayTek Corp."

This page is left blank.

Part II Connectivity

WAN

It means wide area network. Public IP will be used in WAN.

LAN

It means local area network. Private IP will be used in LAN. Local Area Network (LAN) is a group of subnets regulated and ruled by router. The design of network structure is related to what type of public IP addresses coming from your ISP.

NAT

When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network.

Applications

DNS, LAN DNS, IGMP, LDAP, WOL, RADIUS, SMS, Bonjour, High Availability

Routing

Static Route, Load-Balance/Route Policy

II-1 WAN

It allows users to access Internet.

Basics of Internet Protocol (IP) Network

IP means Internet Protocol. Every device in an IP-based Network including routers, print server, and host PCs, needs an IP address to identify its location on the network. To avoid address conflicts, IP addresses are publicly registered with the Network Information Centre (NIC). Having a unique IP address is mandatory for those devices participated in the public network but not in the private TCP/IP local area networks (LANs), such as host PCs under the management of a router since they do not need to be accessed by the public. Hence, the NIC has reserved certain addresses that will never be registered publicly. These are known as *private* IP addresses, and are listed in the following ranges:

From 10.0.0.0 to 10.255.255.255

From 172.16.0.0 to 172.31.255.255

From 192.168.0.0 to 192.168.255.255

What are Public IP Address and Private IP Address

As the router plays a role to manage and further protect its LAN, it interconnects groups of host PCs. Each of them has a private IP address assigned by the built-in DHCP server of the Vigor router. The router itself will also use the default **private IP** address: 192.168.1.1 to communicate with the local hosts. Meanwhile, Vigor router will communicate with other network devices through a **public IP** address. When the data flow passing through, the Network Address Translation (NAT) function of the router will dedicate to translate public/private addresses, and the packets will be delivered to the correct host PC in the local area network. Thus, all the host PCs can share a common Internet connection.

Get Your Public IP Address from ISP

In ADSL deployment, the PPP (Point to Point)-style authentication and authorization is required for bridging customer premises equipment (CPE). Point to Point Protocol over Ethernet (PPPoE) connects a network of hosts via an access device to a remote access concentrator or aggregation concentrator. This implementation provides users with significant ease of use. Meanwhile it provides access control, billing, and type of service according to user requirement.

When a router begins to connect to your ISP, a serial of discovery process will occur to ask for a connection. Then a session will be created. Your user ID and password is authenticated via **PAP** or **CHAP** with **RADIUS** authentication system. And your IP address, DNS server, and other related information will usually be assigned by your ISP.

Web User Interface

II-1-1 General Setup

This section will introduce some general settings of Internet and explain the connection modes for WAN# in details.

This router supports multiple-WAN function. It allows users to access Internet and combine the bandwidth of the multiple WANs to speed up the transmission through the network. Each WAN port can connect to different ISPs, even if the ISPs use different technology to provide telecommunication service (such as DSL, Cable modem, etc.). If any connection problem occurred on one of the ISP connections, all the traffic will be guided and switched to the normal communication port for proper operation. Please configure WAN# settings.

This webpage allows you to set general setup for WAN# respectively.

WAN >> General Setup

Load Balance Mode: Auto Weight IP Based Advance					
Index	Enable	Physical Mode / Type / Port	Line Speed(Kbps) DownLink / UpLink	Active Mode	Load Balance
WAN1	☒	Ethernet / Auto negotiation / P1	0 / 0	Always On	V
WAN2	☒	Ethernet / Auto negotiation / P2	0 / 0	Always On	V

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
Load Balance Mode	This option is available for multiple-WAN for getting enough bandwidth for each WAN port. If you know the practical bandwidth for your WAN interface, please choose the setting of According to Line Speed . Otherwise, please choose Auto Weight to let the router reach the best load balance.
Mode	IP Based - The same source / destination IP pair will select the same WAN interface as policy. It is the default setting. Session Based - All of the WAN interfaces will be used (as out-going WAN) for passing through new sessions to get better transmission speed. Though good speed test result for throughput might be reached; however, some web site may not open smoothly, especially the site need authentication, e.g., FTP. If you have no strong demand about speed test result, keep default settings as IP based.
Load Balance Setup	Advance - Load Balance for the traffic of STUN, google STUN, and SIP are disabled in default to prevent from conflict. The following dialog allows you to define protocol, port and name for the traffic not to be applied with load balance. That is, when an item is enabled (checked), it might

not be affected by load balance.

Index	Enable	Protocol	From	To	comment(11 char max.)
1.	☒	UDP	3478	3478	STUN
2.	☒	UDP	19302	19302	Google STUN
3.	☒	TCP/UDP	5060	5060	SIP
4.	☐	TCP	80	80	HTTP
5.	☐	TCP	443	443	SSL
6.	☐	TCP/UDP	0	0	
7.	☐	TCP/UDP	0	0	
8.	☐	TCP/UDP	0	0	

<< 1-8 | 9-16 | 17-24 | 25-32 >> [Next >>](#)

OK Clear All Close

Index	Click on the WAN# link to bring up its settings page. WAN# (1 to 4): Ethernet WAN interface. WAN1, WAN2, WAN3 and WAN4 are available when they are specified as WAN interfaces on Port Setup . However, each time only two WAN interfaces are allowed to be configured in this page.
Enable	Select to enable WAN interface.
Physical Mode / Type / Port	Display the physical mode, physical type and physical port of such WAN interface.
Line Speed (Kbps) DownLink/UpLink	Display the downstream and upstream rate of such WAN interface.
Active Mode	Display whether such WAN interface is Active device or backup device. Always On - WAN is always enabled. Backup (WAN#) - Display the backup WAN interface for such WAN when it is disabled.
Load Balance	Select to enable the load balance function.

After finished the above settings, click **OK** to save the settings.

II-1-1-1 WAN (Ethernet)

WAN# can be configured for physical mode of Ethernet.

WAN >> General Setup

WAN 1

Enable:	Yes		
Display Name:			
Physical Mode:	Ethernet		
Physical Type(Ethernet):	Auto negotiation		
Line Speed(Kbps):			
DownLink	0		
UpLink	0		
VLAN Tag insertion :	Disable		
Tag value:	0	(0~4095)	
Priority:	0	(0~7)	
Active Mode:	Failover	Load Balance:	☒
	☒ WAN Failure		
	☐ Traffic Threshold		
	Upload	User defined	0K bps (Default unit: K)
	Download	User defined	0K bps (Default unit: K)
Active When:	☒ Any of the selected WAN disconnect		
	☐ All of the selected WAN disconnect		
	☐ WAN 1 ☐ WAN 3		

Note:

The line speed setting of WAN interface is available only when According to Line Speed is selected as the Load Balance Mode.

Available settings are explained as follows:

Item	Description
Enable	Yes - WAN is enabled. No - WAN is disabled.
Display Name	Optional name to identify the WAN. Enter the description for the interface.
Physical Mode	Physical connection used for this WAN. Ethernet - WAN connection to be established through the WAN2 Ethernet port.
Physical Type	(Available only when Physical Mode is set to Ethernet) Auto negotiation - Ethernet connection speed is automatically negotiation between the router and the ISP's equipment. 10M full duplex - Ethernet speed is manually set to 10 Mbit/s, full duplex. 100M full duplex - Ethernet speed is manually set to 100 Mbit/s, full duplex. 1G full duplex - Ethernet speed is manually set to 1 Gbit/s, full duplex. 2.5G full duplex - Ethernet speed is manually set to 2.5 Gbit/s, full duplex.
Line Speed (Kbps)	It determines the ratio of outbound connections made by the router across all active WANs. The Line Speed on WAN>>General Setup must first be set to According to Line Speed before these values can be changed.

	DownLink - WAN downlink speed. UpLink - WAN uplink speed.
VLAN Tag insertion	Determines whether 802.1ad VLAN tags will be added to outbound WAN traffic in ADSL/VDSL 2 mode. Check with your ISP to determine if this is required, and if so, the proper tag and priority values to be used. Enabled - Tagging enabled. Disabled - Tagging disabled. Tag value - Value must be between 1 and 4095. Priority - Priority code point (PCP). Value must be between 0 and 7.
Active Mode	Always On - WAN is always enabled. Failover - WAN is enabled only when other WAN port (see below) has lost connection. ● WAN Failure - When the active WAN failed, the WAN selected above will be activated as the main network connection. ● Traffic Threshold - When the upload traffic and download traffic of active WAN reaches the traffic threshold (specified here), the backup WAN will be enabled automatically to share the overloaded data traffic. Active When - Set the condition for backup connection. ● Any - The selected WAN(s) will be activated when any master WAN interface disconnects. ● All - All of the backup WANs will be activated only when all master WAN interface disconnects.

After finished the above settings, click **OK** to save the settings.

II-1-2 Internet Access

Vigor router supports multi-WAN function. Users can set different WAN settings for Internet Access.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode / Port	Access Mode	
WAN1		Ethernet / P1	Static or Dynamic IP	Details Page IPv6
WAN2		Ethernet / P2	Static or Dynamic IP None PPPoE Static or Dynamic IP	Details Page IPv6

[DHCP Client Option](#)

Available settings are explained as follows:

Item	Description
Index	The WAN interface.
Display Name	Reflects the Display Name configured for the WAN in the General Setup section.
Physical Mode	Reflects the Physical Mode configured for the WAN in the General Setup section.
Access Mode	Internet access mode of the WAN. The details page of that mode will be popped up. If not, click Details Page for accessing the page to configure the settings.
Details Page	Click this button to bring up the Internet Access settings page.
IPv6	Click this button to bring up the IPv6 settings page. When IPv6 is enabled, the button label is shown in green:  - IPv6 is enabled.  - IPv6 is disabled.
DHCP Client Option	Click this button to configure additional DHCP client options. DHCP packets can be processed by adding option number and data information when such function is enabled and configured.

WAN >> Internet Access

DHCP Client Options Status

Enable	Interface	Option	Type	Data
☐				

Enable: ☒ All ☒ WAN1 ☐ WAN2 ☐ WAN8 ☐ WAN9 ☐ WAN10 ☐ WAN11 ☐ WAN12 ☐ WAN13

Interface: ☐ WAN14 ☐ WAN15 ☐ WAN16 ☐ WAN17 ☐ WAN18 ☐ WAN19 ☐ WAN20 ☐ WAN21 ☐ WAN22 ☐ WAN23

Option Number:

Data Type: ☒ ASCII Character (EX: Option:18, Data:/path)
☐ Hexadecimal Digit (EX: Option:18, Data:2f70617468)
☐ Address List (EX: Option:44, Data:172.16.2.10,172.16.2.20...)

Data:

Add Update Delete Reset

Note:
1. Option 12 is reserved. You cannot configure it here, but you can configure it in "Router Name" field of "WAN >> Internet Access >> Details Page".
2. Option 55 is reserved and configured with value 1, 3, 6, 15 and 212, also 33 and 121 for some models.
3. Configuring option 61 here will override the setting in "WAN >> Internet Access" page's DHCP Client Identifier field.

OK

Options List - Shows all the DHCP options that have been configured in the system.

Enable/Disable - If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled. Each DHCP option is composed by an option number with data. For example,

Option number:100

Data: abcd

When it is enabled, the specified values for DHCP option will be seen in DHCP reply packets.

Interface - WAN interface(s) to which this entry is applicable. WAN1 through WAN2 are physical WANs that can be set up in the WAN>>General Setup and WAN>>Internet Access sections. WAN8 through WAN23 are virtual WANs that can be set up in the WAN>>Multi-VLAN section.

Option Number - Enter a number for this function.

Data Type - Choose the type (ASCII or Hex or Address List) for the data to be stored. Type of data in the Data field:

- ASCII Character: A text string. Example: /path.
- Hexadecimal Digit: A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468.
- Address List: One or more IPv4 addresses, delimited by commas.

Data - Data of this DHCP option. Enter the content of the data to be processed by the function of DHCP option.

Info

If you choose to configure option 61 here, the detailed settings in WAN>>Interface Access will be overwritten.

II-1-2-1 WAN# Details Page (PPPoE, Physical Mode: Ethernet)

To choose PPPoE as the accessing protocol of the Internet, please select **PPPoE** from the **WAN>>Internet Access >>WAN2** page. The following web page will be shown.

WAN >> Internet Access

MTU
 1492 (Max: 1492)

PPP/MP Setup
 PPP Authentication PAP or CHAP
 Idle Timeout -1 second(s)
 IP Assignment (IPCP) ☐ Static ☒ Dynamic
 Fixed IP Address

Dial-Out Schedule
 Index(1-15) in Schedule Setup:
 None => None
 => None => None

TTL
☒ Change the TTL value

☒ Default MAC Address
☐ Use the following MAC Address
 14 : 49 : BC : 0D : 1F : 49

Note:

VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
 We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.

Available settings are explained as follows:

Item	Description
Enable/Disable	Enable or disable PPPoE access mode.
ISP Access Setup	Enter your allocated username, password and authentication parameters according to the information provided by your ISP. Username - Username provided by the ISP for PPPoE authentication. Password - Password provided by the ISP for PPPoE authentication. More Options - Service Name (Optional) - Sets the PPP service name tag. Required by some ISPs. Leave blank unless instructed otherwise by your ISP.
PPPoE Pass-through	The router offers PPPoE dial-up connection. Besides, you also can establish the PPPoE connection directly from local clients to your ISP via the Vigor router. When PPPoA protocol is selected, the PPPoE package transmitted by PC will be transformed into PPPoA package and sent to WAN server. Thus, the PC can access Internet through such direction.

	For Wired LAN – If you check this box, PCs on the same network can use another set of PPPoE session (different with the Host PC) to access into Internet.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose ARP Detect or Ping Detect for the system to execute for WAN detection. ● ARP Detect - The router broadcasts an ARP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Primary/Secondary Ping IP – Enter Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP – Enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) – Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255. ● Ping Interval – Enter the interval for the system to execute the PING operation. ● Ping Retry – Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492. Path MTU Discovery – Use this feature to determine the optimal MTU size for the WAN. Click Path MTU Discovery to open the following dialog.  ● Path MTU to – Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. ● MTU size start from – Determine the starting point value of the packet. ● MTU reduce size by – Number of octets by which to

	decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached. ● Detect – Click it to detect a suitable MTU value. ● Accept – After clicking it, the detected value will be displayed in the field of MTU.
PPP/MP Setup	PPP Authentication – The protocol used for PPP authentication. ● PAP only - Only PAP (Password Authentication Protocol) is used. ● PAP or CHAP - Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use. Idle Timeout – Set the timeout for breaking down the Internet after passing through the time without any action. IP Address Assignment (IPCP) - Configure the router according to how your ISP allocates WAN IP address(es) to you. ● Static - ISP has assigned a fixed WAN IP address, which is to be entered below in Fixed IP Address. ● Dynamic - WAN IP address is dynamically allocated. Fixed IP Address – Enter a fixed IP address. WAN IP Alias - Click to enter multiple WAN IP addresses assigned by your ISP. 
Dial-Out Schedule	Specify up to 4 time schedule entries to enable or disable the

	WAN. All the schedules can be set previously in Applications >> Schedule web page and you can use the number that you have set in that web page.
TTL	Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router. ● If enabled - TTL value will be reduced (-1) when it passess through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". ● If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.
MAC	Default MAC Address - Use the default MAC address for the WAN Ethernet port. Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.

After finishing all the settings here, please click **OK** to activate them.

II-1-2-2 WAN# Details Page (Static or Dynamic IP, Physical Mode: Ethernet)

For static IP mode, you usually receive a fixed public IP address or a public subnet, namely multiple public IP addresses from your DSL or Cable ISP service providers. In most cases, a Cable service provider will offer a fixed public IP, while a DSL service provider will offer a public subnet. If you have a public subnet, you could assign an IP address or many IP address to the WAN interface.

To use **Static or Dynamic IP** as the accessing protocol of the internet, please click the **Static or Dynamic IP** tab. The following web page will be shown.

WAN 1

PPPoE	Static or Dynamic IP	IPv6
☒ Enable ☐ Disable		
IP Network Settings ☒ Obtain an IP address automatically More Options ☐ Specify an IP address IP Address: 172.16.21.117 Subnet Mask: 255.255.255.0 Gateway IP Address: 172.16.21.1 WAN IP Alias		
DNS Server IP Address Primary Server: 8.8.8.8 Secondary Server: 8.8.4.4		
WAN Connection Detection Mode: ARP Detect		
MTU 1500 Path MTU Discovery		
Keep WAN Connection ☐ Enable PING to keep alive PING to the IP: PING Interval: 0 minute(s)		
TTL ☒ Change the TTL value		
RIP Routing ☐ Enable RIP		
Bridge Mode ☐ Enable Bridge Mode Bridge Subnet: LAN 1		
MAC Address ☒ Default MAC Address ☐ Use the following MAC Address 14 : 49 : BC : 0D : 1F : 49		

Note:

1. VPN feature may be affected when the value of MTU is changed, please also check your value of VPN mss by using "VPN mss set" command.
We recommend to put the same decreased value on VPN mss. For example, reducing the MTU from 1500 -> 1400, then it will need to reduce 100 from mss value.
2. If enable firewall in bridge mode, IPv6 connection type would be change to DHCPv6 mode.
3. Bridge Subnet cannot be selected by Multi-WAN Interface at the same time.
4. If both Bridge Mode and Firewall are enabled, the settings under User Management will be ignored.

OK

Cancel

Available settings are explained as follows:

Item	Description
Enable/Disable	Enable or disable Static or Dynamic IP access mode.
IP Network Settings	Obtain an IP address automatically - The router receives IP configuration information from a DHCP server. More Options - Click to set more options. ● Router Name - Used by some ISPs. Contact your ISP for the appropriate values. ● Domain Name -Used by some ISPs. Contact your ISP for the appropriate values. Enable DHCP Client Identifier* - Used by some ISPs that authenticates using DHCP Client Identifier (Option 61). To enable, tick this box and fill out the Username and Password fields below. Specify an IP address -Use the IP address, Subnet Mask and Gateway values specified below. ● IP Address -WAN IP address assigned by the ISP. ● Subnet Mask -WAN subnet mask. ● Gateway IP Address - IP address of the WAN Gateway. WAN IP Alias - Click to enter multiple WAN IP addresses assigned by your ISP.

	
DNS Server IP Address	Primary IP Address - IP address of primary DNS server. Secondary IP Address - IP address of secondary DNS server.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose ARP Detect, Ping Detect, Always On or Strict ARP Detect for the system to execute for WAN detection. ● ARP Detect - The router broadcasts an ARP request every 5 seconds. If no response is received within 30 seconds, the WAN connection is deemed to have failed. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On- The router assumes the WAN connection is always active. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Primary/Secondary Ping IP – Enter Primary or Secondary IP address in this field for pinging. ● Ping Gateway IP – Enable this setting to use current WAN gateway IP address for pinging. With the IP address(es) pinging, Vigor router can check if the WAN connection is on or off. ● TTL (Time to Live) – Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255. ● Ping Interval - Enter the interval for the system to execute the PING operation.

	● Ping Retry - Enter the number of times that the system is allowed to execute the PING operation before WAN disconnection is judged.
MTU	Maximum Transmission Unit, the size of the largest packet, in bytes, that can be transmitted to the WAN. The maximum value is 1500. For PPPoE connections, there is always an 8-byte overhead, so the maximum valid MTU value for PPPoE is 1492. Path MTU Discovery - Use this feature to determine the optimal MTU size for the WAN. Click Detect to open the following dialog.  ● Path MTU to - Select Host / IP, for an IPv4 address or Host / IPv6, for an IPv6 address, and then enter the IP address in the textbox. ● MTU size start from - Determine the starting point value of the packet. ● MTU reduce size by - Number of octets by which to decrease the 1500-byte MTU. Start with a 0 value for the reduce size and click the Detect button. If the message Fail is returned, increase the MTU reduce size and try again. Repeat until you see the message Success, indicating that the optimal MTU size has been reached. ● Detect - Click it to detect a suitable MTU value. ● Accept - After clicking it, the detected value will be displayed in the field of MTU.
Keep WAN Connection	Enable PING to keep alive - If selected, ping a WAN host to maintain the connection. If unselected, ping to keep WAN alive is disabled. PING to the IP - IP address of host to be pinged. PING Interval - Number of minutes to wait before sending a ping request to the WAN host.
TTL	Change the TTL value - Enable or disable the TTL (Time to Live) for a packet transmitted through Vigor router. ● If enabled - TTL value will be reduced (-1) when it pass through Vigor router. It will cause the client, accessing Internet through Vigor router, be blocked by certain ISP when TTL value becomes "0". ● If disabled - TTL value will not be reduced. Then, when a packet passes through Vigor router, it will not be cancelled. That is, the client who sends out the packet will not be blocked by ISP.
RIP Protocol	Routing Information Protocol is abbreviated as RIP(RFC1058). If selected, the router can exchange routing information with other routers.

Bridge Mode	Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group. Enable Full Bridge Mode - If the function is enabled, the router will work as a bridge modem which is able to forward incoming packets with VLAN tags. Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated. Bridge Subnet - LAN subnet to be bridged.
MAC Address	Default MAC Address - Use the default MAC address for the WAN Ethernet port. Specify a MAC Address - Specify a MAC address for the WAN Ethernet port. Select this option if your ISP authenticates by MAC addresses.

After finishing all the settings here, please click **OK** to activate them.

II-1-2-3 WAN# Details Page for IPv6 – Offline

Info

At present, the IPv6 prefix can be acquired via the PPPoE mode connection which is available for the areas such as Taiwan (hinet), the Netherlands, Australia and UK.

II-1-2-5 WAN# Details Page for IPv6 – TSPC

Tunnel setup protocol client (TSPC) is an application which could help you to connect to IPv6 network easily.

Please make sure your IPv4 WAN connection is OK and apply one free account from hexago (<http://gogonet.gogo6.com/page/freenet6-account>) before you try to use TSPC for network connection. TSPC would connect to tunnel broker and requests a tunnel according to the specifications inside the configuration file. It gets a public IPv6 IP address and an IPv6 prefix from the tunnel broker and then monitors the state of the tunnel in background.

After getting the IPv6 prefix and starting router advertisement daemon (RADVD), the PC behind this router can directly connect to IPv6 the Internet.

WAN 1

PPPoE	Static or Dynamic IP	IPv6
Internet Access Mode Connection Type: TSPC ▼		
TSPC Configuration Username: Max: 63 characters Password: Max: 63 characters Tunnel Broker: 		
WAN Connection Detection Mode: Always On ▼		

OK Cancel

Available settings are explained as follows:

Item	Description
Username	It is suggested for you to apply another username and password for http://gogonet.gogo6.com/page/freenet6-account .
Password	Enter the password assigned with the user name.
Tunnel Broker	Enter the address for the tunnel broker IP, FQDN or an optional port number.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose Ping Detect or Always On for the system to execute for the WAN detection. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname – Enter IP address in this field for ping. ● TTL (Time to Live) – Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click **OK** to save the settings.

II-1-2-6 WAN# Details Page for IPv6 – AICCU

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6
Internet Access Mode Connection Type: AICCU		
AICCU Configuration ☐ Always On Username: Max: 63 characters Password: Max: 63 characters Tunnel Broker: tic.sixxs.net Tunnel ID: Subnet Prefix: / 		
WAN Connection Detection Mode: Always On		

Note: If "Always On" is not enabled, AICCU connection would only retry three times.

OK

Cancel

Available settings are explained as follows:

Item	Description
Always On	If selected, always attempt to reconnect if connection is lost. If unselected, reconnect up to 3 times if connection is lost.
Username	Login Username. Enter the name obtained from the broker. Please apply new account at http://www.sixxs.net/ . It is suggested for you to apply another username and password.
Password	Login Password. Enter the password.
Tunnel Broker	Address of the tunnel broker. The server can provide IPv6 tunnels to sites or end users over IPv4. Enter the address for the tunnel broker IP, FQDN or an optional port number.
Tunnel ID	One user account may have several tunnels. And, each tunnel shall have one specified tunnel ID (e.g., T115394). Enter the ID offered by Tunnel Broker.
Subnet Prefix	Enter the subnet prefix address obtained from service provider. The maximum length of the prefix you can set is 128 characters.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose Ping Detect or Always On for the system to execute for the WAN detection. Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field,

	to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click **OK** to save the settings.

II-1-2-7 WAN# Details Page for IPv6 – DHCPv6 Client

DHCPv6 client mode would use DHCPv6 protocol to obtain IPv6 address from server.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6
Internet Access Mode Connection Type: DHCPv6 Client		
DHCPv6 Client Configuration IAID (Identity Association ID): 4259032398		
WAN Connection Detection Mode: Ping Detect Ping IP/Hostname: TTL(1-255,0:Auto): 0		
RIPng Protocol ☐ Enable		
Bridge Mode ☐ Enable Bridge Mode Bridge Subnet: LAN 1		

OK Cancel

Available settings are explained as follows:

Item	Description
DHCPv6 Client Configuration	IAID - Unique integer that identifies this WAN interface.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN

	connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. ● NS Detect - The router verifies connectivity by issuing Neighbor Solicitation packets. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) -Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.
Bridge Mode	Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group. Enable Firewall - It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated. Bridge Subnet - LAN subnet to be bridged.

After finished the above settings, click **OK** to save the settings.

II-1-2-8 WAN# Details Page for IPv6 – Static IPv6

This page allows you to configure an ISP-assigned static IPv6 setup.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6						
Internet Access Mode Connection Type: Static IPv6

Bridge Mode ☐ Enable Bridge Mode Bridge Subnet: LAN 1								

Available settings are explained as follows:

Item	Description
Static IPv6 Address Configuration	IPv6 Address – WAN IPv6 address assigned by the ISP. Prefix Length – Length of the IPv6 prefix. Add – Click this button to add the values in the IPv6 Address and Prefix Length fields to the IPv6 address table. Update – Click it to modify an existed entry. Delete – To remove an IPv6 address, select it by clicking on the entry in the Current IPv6 Address Table, then click the Delete button.
Current IPv6 Address Table	Display current interface IPv6 address.
Static IPv6 Gateway Configuration	IPv6 Gateway Address - IPv6 address of the ISP gateway.

WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose Always On, Ping Detect or NS Detect for the system to execute for WAN detection. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. ● NS Detect - The router verifies connectivity by issuing Neighbor Solicitation packets. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname – Enter an IP address in this field for pinging. ● TTL (Time to Live) –Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.
RIPng Protocol	RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.
Bridge Mode	Enable Bridge Mode - If selected, the router will bridge the WAN connection to a LAN group. Enable Firewall – It is available when Bridge Mode is enabled. When both Bridge Mode and Firewall check boxes are enabled, the settings configured (user profiles) under User Management will be ignored. And all of the filter rules defined and enabled in Firewall menu will be activated. Bridge Subnet – LAN subnet to be bridged.

After finished the above settings, click **OK** to save the settings.

II-1-2-9 WAN# Details Page for IPv6 – 6in4 Static Tunnel

This page allows you to setup 6in4 Static Tunnel for WAN interface.

However, 6in4 offers a prefix outside of 2002::0/16. So, you can use a fixed endpoint rather than anycast endpoint. The mode has more reliability.

WAN 1

PPPoE	Static or Dynamic IP	IPv6
Internet Access Mode Connection Type: 6in4 Static Tunnel ▼		
6in4 Static Tunnel Remote Endpoint IPv4 Address: 6in4 IPv6 Address: / (default: 64) LAN Routed Prefix: / (default: 64) Tunnel TTL: (default: 255)		
WAN Connection Detection Mode: Always On ▼		

OK Cancel

Available settings are explained as follows:

Item	Description
6in4 Static Tunnel	Remote Endpoint IPv4 Address - WAN IPv6 address assigned by the tunnel provider. 6in4 IPv6 Address - WAN IPv6 address and prefix length assigned by the tunnel provider. LAN Routed Prefix - LAN IPv6 address prefix and prefix length. Tunnel TTL - Time to live value, which is the maximum number of hops allowed to the endpoint.
WAN Connection Detection	Configures how the WAN connection is monitored. Mode - Choose Always On or Ping Detect for the system to execute for WAN detection. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname - Enter an IP address in this field for pinging. ● TTL (Time to Live) - Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click **OK** to save the settings.

Below shows an example for successful IPv6 connection based on 6in4 Static Tunnel mode.

II-1-2-10 WAN# Details Page for IPv6 – 6rd

This page allows you to setup 6rd for WAN interface.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6
Internet Access Mode		
Connection Type		6rd
6rd Settings		
6rd Mode		☐ Auto 6rd ☒ Static 6rd
Static 6rd Settings		
IPv4 Border Relay:		
IPv4 Mask Length:		0
6rd Prefix:		
6rd Prefix Length:		0
WAN Connection Detection		
Mode		Ping Detect
Ping IP/Hostname		
TTL(1-255,0:Auto)		0

OK

Cancel

Available settings are explained as follows:

Item	Description
6rd Settings	Auto 6rd - Used in conjunction with DHCPv4, the router automatically provisions IPv6 using option 212. Static 6rd - IPv6 configuration information is manually entered.
Static 6rd Settings	IPv4 Border Relay - Enter the IPv4 addresses of the 6rd Border Relay for a given 6rd domain. IPv4 Mask Length - Number of high-order bits that are identical in the IPv4 addresses within the 6rd domain. These bits are excluded when constructing the 6rd delegated prefix. It may be any value between 0 and 32. 6rd Prefix - Enter the 6rd IPv6 address. 6rd Prefix Length - Enter the IPv6 prefix length for the 6rd IPv6 prefix in number of bits.

WAN Connection Detection	Configures how the WAN connection is monitored. Mode – Choose Always On or Ping Detect for the system to execute for WAN detection. ● Ping Detect - The router sends an ICMP (Internet Control Message Protocol) echo request every second to the host, whose address is specified in the Ping IP field, to verify the WAN connection. If the remote host does not respond within 30 seconds, the WAN connection is deemed to have failed. ● Always On - The router assumes the WAN connection is always active. If you choose Ping Detect as the detection mode, you have to enter required settings for the following items. ● Ping IP/Hostname – Enter an IP address in this field for ping. ● TTL (Time to Live) –Time To Live, the maximum allowed number of hops to the ping destination. Valid values range from 1 to 255.

After finished the above settings, click **OK** to save the settings.

Below shows an example for successful IPv6 connection based on 6rd mode.

II-1-3 Multi-VLAN

Multi-VLAN lets you configure multiple VLAN groups.

Channel 1 to 2 have the following fixed assignments and cannot be altered.

- Channel 1: Ethernet on WAN1.
- Channel 2: Ethernet on WAN2.

Channels 8 through 23 can be bridged to one or more of the 4 LAN ports P3 through P6.

WAN >> Multi-VLAN

Multi-VLAN

General

Channel	Enable	WAN Type	VLAN Tag	Port-based Bridge			
1	☒	Ethernet(WAN1)	None

Available settings are explained as follows:

Item	Description
Enable Channel 8/9	Enable - Select to enable this channel. Disable - Select to disable this channel.
WAN Type	Specify a WAN type of the PVC Channel/VLAN. Ethernet (WAN1/2) - A VLAN will be created on WAN1/2.
General Settings	Add VLAN Header - (Available when WAN type is ADSL) If selected, enable VLAN tagging on this PVC. ● VLAN Tag - Enter the value as the VLAN ID number. Valid settings are in the range from 1 to 4095. The network traffic flowing on each channel will be identified by the system via their VLAN Tags. Channels using the same WAN type may not configure the same VLAN tag value. ● Priority - Choose the number to determine the packet priority for such VLAN. The range is from 0 to 7.

Open Port-based Bridge Connection for this Channel	If selected, bridge this channel to one or more LAN ports. Physical Members – If selected, a channel is bridged to this LAN port. Note: LAN port P1 is reserved for NAT use and cannot be selected for bridging.
Open WAN Interface for this Channel	If selected, NAT (Network Address Translation) will be applied to this channel to create a virtual WAN. The virtual WAN carries the same number as the channel itself. WAN Application – The intended usage of this channel. ● Management – The router can be managed using the web-based configuration, telnet and TR-069 via this channel. ● IPTV - IGMP packets can be sent to IPTV servers on this channel. WAN Setup - The WAN access method of this channel. Available options are PPPoE/PPPoA and Static or Dynamic IP. ● PPPoE/PPPoA - When PPPoE/PPPoA is selected, the ISP Access Setup and IP Address From ISP settings are available for configuration, and will be used to establish the WAN connection. ● Static or Dynamic IP - When Static or Dynamic IP is selected, the WAN IP Network Settings and DNS Server IP Address settings are available for configuration, and will be used to establish the WAN connection.
ISP Access Setup	Enter your allocated username, password and authentication parameters according to the information provided by your ISP. Username – Name provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters. Password – Password provided by the ISP for PPPoE/PPPoA authentication. Maximum length is 62 characters. PPP Authentication – The protocol used for PPP authentication. ● PAP only- Only PAP (Password Authentication Protocol) is used. ● PAP or CHAP- Both PAP and CHAP (Challenge-Handshake Authentication Protocol) can be used for PPP authentication. Router negotiates with the PPTP or L2TP server to determine which protocol to use. Always On – If selected, the router will maintain the PPPoE/PPPoA connection. Idle Timeout – Maximum length of time, in seconds, of idling allowed (no traffic) before the connection is dropped. IP Address from ISP - Specifies how the WAN IP address of the channel configured. ● Fixed IP Yes - IP address entered in the Fixed IP Address field will be used as the IP address of the virtual WAN. No - Virtual WAN IP address will be assigned by the ISP's PPPoE/PPPoA server. ● Fixed IP Address - Enter an IP address.
WAN IP Network Settings	Obtain an IP address automatically – Select this option if the

	router is to receive IP configuration information from a DHCP server. ● Router Name – Sets the value of DHCP Option 12, which is used by some ISPs. ● Domain Name – Sets the value of DHCP Option 15, which is used by some ISPs. Specify an IP address – Select this option to manually enter the IP address. ● IP Address – Enter the IP address. ● Subnet Mask – Enter the subnet mask. ● Gateway IP Address – Enter gateway IP address. DNS Server IP Address - Enter the primary IP address for the router if you want to use Static IP mode. If necessary, Enter secondary IP address for necessity in the future.

After finished the above settings, click **OK** to save the settings and return to previous page.

II-1-4 WAN Budget

This function is used to determine the data *traffic volume* for each WAN interface respectively to prevent overcharges for data transmission by the ISP. Please note that the Quota Limit and Billing cycle day of month settings will need to be configured correctly first in order for some period calculations to be performed correctly.

The WAN Budget feature allows you to conveniently keep track of Internet traffic volume. You can:

- set up calendar cycles to monitor;
- limit your Internet usage according to your ISP's quota;
- set up action(s) to take when the quota is exceeded.

II-1-4-1 General Setup

WAN >> WAN Budget

General Setup			Status		
Index	Enable	Quota	When quota exceeded	Time cycle	Duration
WAN1	☐	0MB/0MB			0/00/00 00:00~0/00/00 00:00
WAN2	☐	0MB/0MB			0/00/00 00:00~0/00/00 00:00

Note:

1. The budget traffic information provided here is for reference only, please consult your ISP for the actual traffic usage and charges.
2. When hardware acceleration function is used, the monitored WAN traffic of Ethernet WAN interfaces may be slightly inaccurate.

OK

Cancel

Item	Description
Index	The WAN port. Click to configure WAN Budget for a particular WAN.
Enable	v - WAN Budget is enabled on this WAN. x - WAN Budget is disabled on this WAN.
Quota	The current cycle's Internet usage is expressed as x/y where x is the cumulative usage and y is the upper limit. For example, 100MB/200MB means the usage thus far in this cycle is 100MB, and the upper limit is 200MB.
When quota exceeded	Actions to be taken once the quota is reached. Shutdown - WAN will be disabled. Mail Alert - Email will be sent to the administrator.
Time cycle	Reset frequency of the usage data. Monthly - The Monthly option in the Criterion and Action tab was used to set up the usage quota. User Defined : The User Defined option in the Criterion and Action tab was used to set up the usage qota.
Duration	Start and end timestamps of the current cycle.

Data quota resets on day ▾ at ▾

Note:

1. Please make sure the Time and Date of the router is configured.
2. SMS message and mail will be sent when the usage reaches 95% and 100% of quota.

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	When selected, WAN Budget is enabled for this WAN.
Quota Limit	Enter the data traffic quota allowed for such WAN interface. There are two unit (MB and GB) offered for you to specify.
When quota exceeded	Check the box(es) as the condition(s) for the system to perform when the traffic has exceeded the budget limit. Shutdown WAN interface – All the outgoing traffic through such WAN interface will be terminated. ● Using Notification Object – The system will send out a notification based on the content of the notification object. ● Set Mail Alert – The system will send out a warning message to the administrator when the quota is running out. However, the connection charges will be calculated continuously. ● Set SMS message – The system will send out SMS message to the administrator when the quota is running out.
Monthly	Some ISP might apply for the network limitation based on the traffic limit per month. This setting is to offer a mechanism of resetting the traffic record every month. Monthly Custom Select the day of a month when your (cellular) data resets. Data quota resets on day 1 ▾ at 00:00 ▾ Data quota resets on day ... – You can determine the starting day in one month.
Custom	This setting allows the user to define the billing cycle according to his request. The WAN budget will be reset with an interval of billing cycle. Monthly is default setting. If long period or a short period is required, use Custom. The period of cycle duration is between 1 day and 60 days. You can determine the cycle

duration by specifying the days and the hours. In addition, you can specify which day of today is in a cycle.

Use Cycle in hours -

Monthly	Custom

☒ Use Cycle in hours

☐ Use Cycle in days

Usage counter resets at the beginning of each cycle.

Cycle duration : days and hours

Today is day in the cycle.

- **Cycle duration:** Specify the days and hours to reset the traffic record. For example, 7 means the whole cycle is 7 days; 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- **Today is day** - Specify the day in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

Use Cycle in days -

- **Cycle duration:** Specify the days to reset the traffic record. For example, 7 means the whole cycle is 7 days; 20 means the whole cycle is 20 days. When the time is up, the router will reset the traffic record automatically.
- **Today is day** - Specify the day and time for data quota rest in the cycle as the starting point which Vigor router will reset the traffic record. For example, "3" means the third day of the cycle duration.

After finished the above settings, click **OK** to save the settings.

II-1-4-2 Status

The status page displays the status WAN budget, including the duration and the usage.

WAN >> WAN Budget

If the WAN budget is exhausted, a lock will be displayed on the page if **Shutdown WAN interface** is selected. Which means no data transmission will be carried out. Moreover, the system will send out a warning message to the administrator if **Mail Alert** is selected. Or, the system will send out SMS message to the administrator if **SMS message** is selected.

WAN >> WAN Budget

Application Notes

A-1 How to configure IPv6 on WAN interface?

This document is going to demonstrate how to implement an IPv6 address on Vigor Router's WAN.

1. Before configuring IPv6 on WAN, please make sure the router is connected to the IPv4 Internet.

Online Status

Physical Connection						System Uptime: 0day 0:3:29	
IPv4			IPv6				
LAN Status		Primary DNS: 168.95.1.1			Secondary DNS: 168.95.192.1

 Packets: Sent = 5, Received = 5, Lost = 0 (0% loss)

Below we will provide some examples of configuring IPv6 with different connection types.

PPP (Point-to-Point Protocol)

This applies if the IPv4 access mode is PPPoE, and the IPv4 ISP also provides an IPv6 address. To use IPv6 PPP, you just need to choose the **Connection Type** to "PPP", no other setting is required.

WAN >> Internet Access

WAN 1

PPPoE	Static or Dynamic IP	IPv6

☐ Enable		

Note: IPv4 WAN setting should be PPPoE / PPPoA client.

OK

Cancel

TSPC (Tunnel Setup Protocol Client)

In this mode, the IPv6 connectivity is provided by a tunnel broker on the IPv4 Internet through a tunnel set up by Tunnel Setup Protocol (TSP). To use TSPC, you'll need to sign up for a tunnel broker service and get a username and password first, then, configure the router as follows:

1. Set Connection Type to TSPC.
2. Enter the Username and Password registered at the TSP server.
3. Enter the IP or Domain Name of the TSPC server for **Tunnel Broker**.

WAN >> Internet Access

6in4 Static Tunnel

In this mode, the IPv6 connectivity is provided by a tunnel broker on the IPv4 Internet through a tunnel configured manually. To use 6in4 Static Tunnel, you need sign up for a tunnel broker service and get an IPv6 address and routed IPv6 prefixes first. Then, configure the router as follows:

1. Set Connection Type to 6in4 Static Tunnel.
2. Enter the tunnel server's IPv4 address in Remote Endpoint IPv4 Address.
3. Enter the router's IPv6 address in 6in4 IPv6 Address.
4. Enter the routed IPv6 prefix in LAN Routed Prefix.

II-2 LAN

A LAN(Local Area Network) comprises a collection of LAN clients, which are networked devices on your premises. A LAN client can be a computer, a printer, a Voice-over-IP (VoIP) phone, a mobile phone, a gaming console, an Internet Protocol Television (IPTV), etc, and can have either a wired (using Ethernet cabling) or wireless (using Wi-Fi) network connection.

LAN clients within the same LAN are normally able to communicate with one another directly, as they are peers to one another, unless measures, such as firewalls or VLANs, have been put in place to restrict such access. Nowadays the most common LAN firewalls are implemented on the LAN client itself. For example, Microsoft Windows since Windows XP and Apple OS X have built-in firewalls that can be configured to restrict traffic coming in and going out of the computer. VLANs, on the other hand, are usually set up using network switches or routers.

To communicate with the hosts outside of the LAN, LAN clients have to go through a network gateway, which in most cases is a router that sits between the LAN and the ISP network, which is the WAN. The router acts as a director to ensure traffic between the LAN and the WAN reach their intended destinations.

IP Address

On most broadband networks, the ISP assigns a single WAN IP address to the subscriber. All LAN clients have to share this WAN IP address when accessing the Internet. To achieve this, a technique called Network Address Translation (NAT) is used. Under NAT, a private block of IP addresses is assigned to the LAN clients, which communicate with WAN hosts through the router, also known as the gateway.

On outgoing traffic to the WAN, the router makes note that a LAN client has attempted to reach a WAN host, and forwards the request to the intended WAN recipient.

On traffic incoming to the LAN from a WAN host, the router checks its records to see if a matching outstanding request from a LAN client to this WAN host exists, and if so, forwards it to the LAN client. Otherwise, the traffic is dropped.

There are 3 distinct blocks of IPv4 address that are reserved for use as private IP addresses on a LAN.

Name	IP Address Range	Number of Available Addresses	Largest Subnet Mask
24-bit Block	10.0.0.0 to 10.255.255.255	16,777,216	255.0.0.0
20-bit Block	172.16.0.0 to 172.31.255.255	1,048,576	255.240.0.0
16-bit Block	192.168.0.0 to 192.168.255.255	65,536	255.255.0.0

The default beginning IP Address of LAN 1 is 192.168.1.1, and the Subnet Mask is 255.255.255.0, for a total of 254 assignable IP addresses, from 192.168.1.1 to 192.168.1.254. The final IP address of the selected range is reserved for routing and cannot be assigned to a LAN client.

In most cases, the default IP address block should work satisfactorily. However, there are situations where you need to select a different address block, such as when you need to communicate with other LANs that already use the same address block.

Private IP addresses can be assigned automatically to LAN clients using Dynamic Host Configuration Protocol (DHCP), or manually assigned. The DHCP server can either be the router (the most common case), or a separate server, that hands out IP addresses to DHCP clients.

Alternatively, static IP addresses can be manually configured on LAN clients as part of their network settings. No matter how IP addresses are configured, it is important that no two devices get the same IP address. If both DHCP and static assignment are used on a network, it is important to exclude the static IP addresses from the DHCP IP pool. For example, if your LAN uses the 192.168.1.x subnet and you have 20 DHCP clients and 20 static IP clients, you could configure 192.168.1.10 as the Start IP Address, 50 as the IP Pool Counts (enough for the current number of DHCP clients, plus room for future expansion), and use addresses greater than 192.168.1.100 for static assignment.

Web User Interface

To begin configuring the LAN settings, select LAN>>General Settings from the menu bar of the Web UI.

II-2-1 General Setup

This page provides you the general settings for LAN.

There are eight subnets provided by the router which allow users to divide groups into different subnets (LAN1 – LAN4). In addition, different subnets can link for each other by configuring **Inter-LAN Routing**. At present, LAN1 setting is fixed with NAT mode only. LAN2 – LAN4 can be operated under **NAT** or **Route** mode. IP Routed Subnet can be operated under Route mode.

LAN 1 is always enabled and is used as the default subnet. LANs 2 to 4 are subnets to be used in conjunction with Virtual LANs (VLANs). Each VLAN can be configured to allow or disallow communication with other VLANs using the Inter-LAN Routing matrix.

To configure a subnet, select its **Details Page** button to bring up the LAN Details Page.

LAN 4	☐	☐	☐	☒

[OK](#)

Available settings are explained as follows:

Item	Description
General Setup	Allow to configure settings for each subnet respectively. Index - Display all of the LAN items. Status - Basically, LAN1 status is enabled in default.

	LAN2 -LAN4 and IP Routed Subnet can be observed by checking the box of Status. DHCP - LAN1 is configured with DHCP in default. If required, please check the DHCP box for each LAN. IP Address - Display the IP address for each LAN item. Such information is set in default and you can not modify it. Details Page - Click it to access into the setting page. Each LAN will have different LAN configuration page. Each LAN must be configured in different subnet. IPv6 - Click it to access into the settings page of IPv6.
DHCP Server Option	DHCP packets can be processed by adding option number and data information when such function is enabled. For detailed information, refer to later section.
Force router to use “DNS server IP address”	Force Vigor router to use DNS servers configured in LAN Port instead of DNS servers given by the Internet Access server (PPPoE, PPTP, L2TP or DHCP server).
Inter-LAN Routing	Check the box to link two or more different subnets (LAN and LAN). Inter-LAN Routing allows different LAN subnets to be interconnected or isolated. It is only available when the VLAN functionality is enabled. Refer to section II-2-2 VLAN on how to set up VLANs. In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.

When you finish the configuration, please click **OK** to save and exit this page.

Info

To configure a subnet, select its Details Page button to bring up the LAN Details Page.

II-2-1-1 Details Page for LAN1 – Ethernet TCP/IP and DHCP Setup

This page has two tabs, LAN Ethernet TCP/IP and DHCP Setup, which sets up the IPv4 LAN environment, and LAN IPv6 Setup, which sets up the IPv6 environment.

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
Network Configuration For NAT Usage IP Address: 192.168.1.1 Subnet Mask: 255.255.255.0 / 24 ▼ LAN IP Alias RIP Protocol Control: Disable ▼	DHCP Server Configuration ☐ Disable ☒ Enable Server ☐ Enable Relay Agent Start IP Address: 192.168.1.10 IP Pool Counts: 200 (max. 1021) Gateway IP Address: 192.168.1.1 Lease Time: 86400 (s) ☒ Clear DHCP lease for inactive clients periodically DNS Server IP Address Primary IP Address: Secondary IP Address:

Note: Change IP Address or Subnet Mask in Network Configuration will also change HA LAN1 Virtual IP to the same domain IP.

Available settings are explained as follows:

Item	Description
Network Configuration	For NAT Usage, IP Address - This is the IP address of the router. (Default: 192.168.1.1). Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24). LAN IP Alias - Such feature allows specifying multiple gateways (under a switch) with different WAN interfaces for accessing the Internet via the Vigor router. Note: 1. LAN IP Alias only applies to multi-gateway usage. When a LAN host set its gateway as LAN IP Alias, Vigor Router will route the host's packets through the specified Output Interface. 2. Route Policy has a higher priority than the LAN IP Alias Output Interface setting. OK Clear All Cancel RIP Protocol Control - When Enabled, the router will attempt to exchange routing information with neighbouring

	routers using the Routing Information Protocol.
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network. If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location. Disable - Disables the built-in DHCP server on the router. Enable Server - Enables the built-in DHCP server on the router. ● Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. ● IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 200. Valid range is between 1 and 1021. The actual number of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. ● Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the Network Configuration section above. ● Lease Time - The maximum duration DHCP-issued IP addresses can be used before they have to be renewed. ● Clear DHCP lease for inactive clients periodically - If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool. Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following: - Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30. - Clear DHCP lease when the client is not responding ARP replies. Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field. ● DHCP Server IP Address - IP Address of the DHCP server to which DHCP requests from LAN clients are forwarded.
DNS Server IP Address	DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address. When these fields are populated, they will be used as the IP addresses of the DNS server information in DHCPv6 responses, overriding the ISP-supplied DNS server addresses. Primary IP Address -You must specify a DNS server IP address

here because your ISP should provide you with usually more than one DNS Server.

Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server.

The default DNS Server IP address can be found via Online Status:

Online Status

Physical Connection		System Uptime: 22:22:45	
IPv4		IPv6	
LAN Status		Primary DNS: 8.8.8.8	Secondary DNS: 8.8.4.4
IP Address	TX Packets	RX Packets	
192.168.1.1	0	41533	

If both the Primary IP and Secondary IP Address fields are left empty, the router will assign DNS servers obtained from WAN interface to local users as a DNS proxy server and maintain a DNS cache. If there is no DNS servers available, router will use its own IP address instead.

If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately. Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click **OK** to save and exit this page.

II-2-1-2 Details Page for LAN2 ~ LAN4

Available settings are explained as follows:

Item	Description
Network Configuration	Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration. For NAT Usage - Click this radio button to invoke NAT function. For Routing Usage - Click this radio button to invoke this function. IP Address - This is the IP address of the router. (Default: 192.168.1.1). Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24).
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatches related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network. If you want to use another DHCP server in the network other than the Vigor Router's, you can let Relay Agent help you to redirect the DHCP request to the specified location. Disable - Disables the built-in DHCP server on the router. Enable Server - Enables the built-in DHCP server on the router. ● Start IP Address - The beginning LAN IP address that is given out to LAN DHCP clients. ● IP Pool Counts - The maximum number of IP addresses to be handed out by DHCP. The default value is 200. Valid range is between 1 and 1021. The actual number

	of IP addresses available for assignment is the IP Pool Counts, or 1021 minus the last octet of the Start IP Address, whichever is smaller. ● Gateway IP Address - The IP address of the gateway, which is the host on the LAN that relays all traffic coming into and going out of the LAN. The gateway is normally the router, and therefore the Gateway IP Address should be identical to the IP Address in the Network Configuration section above. ● Lease Time - The maximum duration DHCP-issued IP addresses can be used before they have to be renewed. ● Clear DHCP lease for inactive clients periodically - If selected, the router sends ARP requests recycles IP addresses previously assigned to inactive DHCP clients to prevent exhaustion of the IP address pool. Note: When Clear DHCP lease for inactive clients periodically is enabled, router will do the following: - Check activities of DHCP clients by ARP requests every minute when the available DHCP IP addresses are less than 30. - Clear DHCP lease when the client is not responding ARP replies. Enable Relay Agent - When selected, all DHCP requests are forwarded to a DHCP server outside of the LAN subnet, and whose address is specified in the DHCP Server IP Address field. ● DHCP Server IP Address - IP Address of the DHCP server to which DHCP requests from LAN clients are forwarded.																
DNS Server IP Address	DNS stands for Domain Name System. Every Internet host must have a unique IP address, also they may have a human-friendly, easy to remember name such as www.yahoo.com. The DNS server converts the user-friendly name into its equivalent IP address. When these fields are populated, they will be used as the IP addresses of the DNS server information in DHCPv6 responses, overriding the ISP-supplied DNS server addresses. Primary IP Address -You must specify a DNS server IP address here because your ISP should provide you with usually more than one DNS Server. Secondary IP Address - You can specify secondary DNS server IP address here because your ISP often provides you more than one DNS Server. The default DNS Server IP address can be found via Online Status: Online Status Physical Connection System Uptime: 22:22:45 <table><thead><tr><th colspan="2">IPv4</th><th colspan="2">IPv6</th></tr></thead><tbody><tr><td>LAN Status</td><td>Primary DNS: 8.8.8.8</td><td colspan="2">Secondary DNS: 8.8.4.4</td></tr><tr><td>IP Address</td><td>TX Packets</td><td colspan="2">RX Packets</td></tr><tr><td>192.168.1.1</td><td>0</td><td colspan="2">41533</td></tr></tbody></table> If both the Primary IP and Secondary IP Address fields are left empty, the router will assign its own IP address to local users as a DNS proxy server and maintain a DNS cache. If the IP address of a domain name is already in the DNS cache, the router will resolve the domain name immediately.	IPv4		IPv6		LAN Status	Primary DNS: 8.8.8.8	Secondary DNS: 8.8.4.4		IP Address	TX Packets	RX Packets		192.168.1.1	0	41533	
IPv4		IPv6															
LAN Status	Primary DNS: 8.8.8.8	Secondary DNS: 8.8.4.4															
IP Address	TX Packets	RX Packets															
192.168.1.1	0	41533															

	Otherwise, the router forwards the DNS query packet to the external DNS server by establishing a WAN (e.g. DSL/Cable) connection.

When you finish the configuration, please click **OK** to save and exit this page.

II-2-1-3 Details Page for IP Routed Subnet

LAN >> General Setup

TCP/IP and DHCP Setup for IP Routed Subnet

Network Configuration ☐ Enable ☒ Disable Description: For Routing Usage IP Address: 192.168.0.1 Subnet Mask: 255.255.255.0 / 24	DHCP Server Configuration Start IP Address: IP Pool Counts: 0 (max. 32) Lease Time: 259200 (s) ☐ Use LAN Port ☒ P5 ☒ P6 ☒ Use MAC Address						
RIP Protocol Control: Disable	<table border="1"> <thead> <tr> <th>Index</th> <th>Matched MAC Address</th> <th>given IP Address</th> </tr> </thead> <tbody> <tr> <td colspan="3" style="height: 100px;"></td> </tr> </tbody> </table> MAC Address : : : : : : Add Delete Edit Cancel	Index	Matched MAC Address	given IP Address			
Index	Matched MAC Address	given IP Address					

Available settings are explained as follows:

Item	Description
Network Configuration	Enable/Disable - Click Enable to enable such configuration; click Disable to disable such configuration. For Routing Usage, IP Address - This is the IP address of the router. (Default: 192.168.1.1). Subnet Mask - The subnet mask, together with the IP Address field, indicates the maximum number of clients allowed on the subnet. (Default: 255.255.255.0/ 24). RIP Protocol Control, Enable - When Enabled, the router will attempt to exchange routing information with neighbouring routers using the Routing Information Protocol.
DHCP Server Configuration	DHCP stands for Dynamic Host Configuration Protocol. The router by factory default acts a DHCP server for your network so it automatically dispatch related IP settings to any local user configured as a DHCP client. It is highly recommended that you leave the router enabled as a DHCP server if you do not have a DHCP server for your network. Start IP Address - Enter a value of the IP address pool for the DHCP server to start with when issuing IP addresses. If the 1st IP address of your router is 192.168.1.1, the starting IP address must be 192.168.1.2 or greater, but smaller than 192.168.1.254. IP Pool Counts - Enter the maximum number of PCs that you want the DHCP server to assign IP addresses to. The default is 50 and the maximum is 253. Lease Time - Enter the time to determine how long the IP

	address assigned by DHCP server can be used. Use LAN Port - Specify an IP for IP Route Subnet. If it is enabled, DHCP server will assign IP address automatically for the clients coming from P1 and/or P2. Please check the box of P1 and P2. Use MAC Address - Check such box to specify MAC address. ● MAC Address: Enter the MAC Address of the host one by one and click Add to create a list of hosts which can be assigned, deleted or edited from above pool. Set a list of MAC Address for 2nd DHCP server will help router to assign the correct IP address of the correct subnet to the correct host. So those hosts in 2nd subnet won't get an IP address belonging to 1st subnet. Add - Enter the MAC address in the boxes and click this button to add. Delete - Click it to delete the selected MAC address. Edit - Click it to edit the selected MAC address. Cancel - Click it to cancel the job of adding, deleting and editing.

When you finish the configuration, please click **OK** to save and exit this page.

II-2-1-4 Details Page for LAN IPv6 Setup

There are two configuration pages for LAN1/LAN2/LAN3/LAN4/LAN5/LAN6/LAN7/LAN8/DMZ Port, Ethernet TCP/IP and DHCP Setup (based on IPv4) and IPv6 Setup. Click the tab for each type and refer to the following explanations for detailed information. Below shows the settings page for IPv6.

LAN >> General Setup

☐ IPv6 Address Random Allocation

☒ Auto IPv6 range

Start IPv6 Address

End IPv6 Address

Advance setting

Advance setting

It provides 2 daemons for LAN side IPv6 address configuration. One is **SLAAC**(stateless) and the other is **DHCPv6** (Stateful) server.

Available settings are explained as follows:

Item	Description
Enable IPv6	Enables or disables IPv6 on the LAN.

WAN Primary Interface	Select the WAN to be used for IPv6 traffic.
Static IPv6 Address	Enter IPv6 Address and Prefix length to be added, or click an existing IPv6 address to be deleted in the Current IPv6 Address Table below and the values will be automatically copied over. IPv6 Address -Type static IPv6 address for LAN. Prefix Length - Enter the fixed value for prefix length. Add - Click it to add a new entry. Delete - Click it to remove an existed entry.
Unique Local Address (ULA) configuration	Unique Local Addresses (ULAs) are private IPv6 addresses assigned to LAN clients. Off - ULA is disabled. Manually ULA Prefix - LAN clients will be assigned ULAs generated based on the prefix manually entered. Auto ULA Prefix - LAN clients will be assigned ULAs using an automatically-determined prefix.
Current IPv6 Address Table	Display current used IPv6 addresses.
DNS Server IPv6 Address	Deploy when WAN is up - The RA (router advertisement) packets will be sent to LAN PC with DNS server information only when network connection by any one of WAN interfaces is up. Enable - The RA (router advertisement) packets will be sent to LAN PC with DNS server information no matter WAN connection is up or not. ● Primary DNS Server - Enter the IPv6 address for Primary DNS server. ● Secondary DNS Server -Type another IPv6 address for DNS server if required. Disable - DNS server will not be used.
Management	Configures the Managed Address Configuration flag (M-bit) in Route Advertisements. ● Off - No configuration information is sent using Route Advertisements. ● SLAAC(stateless) - M-bit is unset. ● DHCPv6(stateful) - M-bit is set, which indicates to LAN clients that they should acquire all IPv6 configuration information from a DHCPv6 server. The DHCPv6 server can either be the one built into the Vigor2860, or a separate DHCPv6 server. Other Option (O-bit) - When selected, the Other Configuration flag is set, which indicates to LAN clients that IPv6 configuration information besides LAN IPv6 addresses is available from a DHCPv6 server. Setting the M-bit (see Management above) has the same effect as implicitly setting the O-bit, as DHCPv6 supplies all IPv6 configuration information, including what is indicated as available when the O-bit is set.
DHCPv6 Server	Enable Server -Click it to enable DHCPv6 server. DHCPv6 Server could assign IPv6 address to PC according to the Start/End IPv6 address configuration. Disable Server -Click it to disable DHCPv6 server.

IPv6 Address Random Allocation - Check it to assign the DHCPv6 IP address randomly to prevent the attacks from the IPv6 reconnaissance techniques.

Auto IPv6 range - When selected, the router's built-in DHCPv6 server decides the LAN IPv6 address range to be used. When deselected, LAN IPv6 addresses given out will be within the range as specified in the **Start IPv6 Address** and **End IPv6 Address**.

- **Start IPv6 Address / End IPv6 Address** - Enter the start and end address for IPv6 server.

Advance setting - Click the **Edit** button to bring up the IPv6 Advanced Settings page.

LAN >> General Setup

Advance setting

The Advanced Settings page has additional settings for Router Advertisement and enabling multiple WANs for IPv6 traffic.

Router Advertisement Configuration - Click **Enable** to enable router advertisement server. The router advertisement daemon sends Router Advertisement messages, specified by RFC 2461, to a local Ethernet LAN periodically and when requested by a node sending a Router Solicitation message. These messages are required for IPv6 stateless auto-configuration.

Disable – Click it to disable router advertisement server.

Hop Limit – The value is required for the device behind the router when IPv6 is in use. Default value of hop limit field in Route Advertisement messages.

Min/Max Interval Time (sec) – Minimum/ Maximum time, in seconds, between unsolicited multicast route advertisement messages sent by the RA server.

Default Lifetime (sec) – Time, in seconds, that the router is to be used as the default router.

Default Preference – Default preference value (Low, Medium, High) of the router sent in route advertisement messages.

MTU – It means Max Transmit Unit for packet. If **Auto** is selected, the router determines the MTU value to send in route advertisement messages.

RIPng Protocol – RIPng (RIP next generation) offers the same functions and benefits as IPv4 RIP v2.

Extension WAN – In addition to the default WAN used for IPv6 traffic specified in the WAN Primary Interface in the LAN IPv6 Setup page, additional WANs can be selected to carry IPv6 traffic by enabling them in the Extension WAN section.

Available WAN – Additional WANs available but not currently selected to carry IPv6 traffic.

Selected WAN – Additional WANs selected to carry IPv6 traffic.

After making changes on the Advance setting page, click the **OK** button to retain the changes and return to the LAN IPv6 Setup page. Be sure to click **OK** on the LAN IPv6 Setup page or else changes made on the Advance setting page will not be saved.

II-2-1-5 DHCP Server Options

DHCP Options can be configured by clicking the **DHCP Server Option** button on the **LAN>> General Setup** screen.

LAN >> General Setup

DHCP Server Customized Status

Enable	Interface	Option	Type	Data

Enable: ☒

Interface: ☐ All ☒ LAN1 ☐ LAN2 ☐ LAN3 ☐ LAN4 ☐ LAN5 ☐ LAN6 ☐ LAN7 ☐ LAN8 ☐ LAN9 ☐ LAN10 ☐ LAN11 ☐ LAN12 ☐ LAN13 ☐ LAN14 ☐ LAN15 ☐ LAN16 ☐ LAN17 ☐ LAN18 ☐ LAN19 ☐ LAN20 ☐ IP Routed Subnet

Next Server IP Address/Server IP Address:

Option Number:

DataType: ☒ ASCII Character (EX :Option:18, Data:/path)
☐ Hexadecimal Digit (EX :Option:18, Data:2f70617468)
☐ Address List (EX :Option:44, Data:172.16.2.10,172.16.2.20...)

Data: Max: 127 characters

Note:

1. Configuring options 44, 46 or 66 here will overwrite the settings by telnet command "msubnet".
2. Configuring option 3 here will overwrite the setting in "LAN >> General Setup" Details Page's "Gateway IP Address" field.
3. Configuring option 15 here will overwrite the setting in "WAN >> Internet Access >> Static or Dynamic IP" Detail Page's "Domain Name" field.

Available settings are explained as follows:

Item	Description

Customized List	Shows all the DHCP options that have been configured in the system.
Enable	If selected, DHCP option entry is enabled. If unselected, DHCP option entry is disabled.
Interface	LAN interface(s) to which this entry is applicable.
Next Server IP Address/SIAddr	Overrides the DHCP Next Server IP address (DHCP Option 66) supplied by the DHCP server.
Option Number	DHCP option number (e.g., 100).
Data Type	Type of data in the Data field: ASCII Character - A text string. Example: /path. Hexadecimal Digit - A hexadecimal string. Valid characters are from 0 to 9 and from a to f. Example: 2f70617468. Address List - One or more IPv4 addresses, delimited by commas.
Data	Data of this DHCP option.

To add a DHCP option entry from scratch, clear the data entry fields (**Enable**, **Interface**, **Option Number**, **Data Type** and **Data**) by clicking Reset. After filling in the values, click **Add** to create the new entry.

To add a DHCP option entry modeled after an existing entry, click the model entry in **Customized List**. The data entry fields will be populated with values from the model entry. After making all necessary changes for the new entry, click **Add** to create it.

To modify an existing DHCP option entry, click on it in **Customized List**. The data entry fields will be populated with the current values from the entry. After making all necessary changes, click **Update** to save the changes.

To delete a DHCP option entry, click on it in **Customized List**, and then click **Delete**.

II-2-2 VLAN

Virtual Local Area Networks (VLANs) allow you to subdivide your LAN to facilitate management or to improve network security.

Select **LAN>>VLAN** from the menu bar of the Web UI to bring up the VLAN Configuration page.

Tagged VLAN

The tagged VLANs (802.1q) can mark data with a VLAN identifier. This identifier can be carried through an onward Ethernet switch to specific ports. The specific VLAN clients can also pick up this identifier as it is just passed to the LAN. You can set the priorities for LAN-side QoS. You can assign each of VLANs to each of the different IP subnets that the router may also be operating, to provide even more isolation. The said functionality is **tag-based multi-subnet**.

Port-Based VLAN

Relative to tag-based VLAN which groups clients with an identifier, port-based VLAN uses physical ports (P3 ~ P6) to separate the clients into different VLAN group.

Virtual LAN function provides you a very convenient way to manage hosts by grouping them based on the physical port. The multi-subnet can let a small businesses have much better isolation for multi-occupancy applications. Go to **LAN** page and select **VLAN**. The following page will appear. Click **Enable** to invoke VLAN function.

Below is an example page in Vigor2962:

VLAN Configuration

☐ Enable

	LAN Port				Subnet	Enable	VLAN Tag	
	P3	P4	P5	P6			VID	Priority

VLAN19	☐	☐	☐	☐	LAN 1 ▾	☐	0	0 ▾

☒ Permit untagged device in P6 to access router

Info

Settings in this page only applied to LAN port but not WAN port.

Available settings are explained as follows:

Item	Description
Enable	Enables or disables VLAN functionality.
VLAN#	Virtual LANs.
LAN Port	P3 - P6 - Physical Ethernet ports on the router. Select the LAN port(s) to group them under the selected VLAN.
Subnet	Select a LAN subnet from LAN 1 to LAN 8 to make the selected VLAN mapping to the specified subnet only.

VLAN Tag	Enable – Select to enable 802.1Q tagging on this VLAN. The router will add specific VLAN number to all packets on the LAN while sending them out. Please enter the tag value and specify the priority for the packets sending by LAN. VID – VLAN Identifier. Valid values are form 0 to 4095. VIDs must be unique. Priority – Valid values are from 0 to 7, where 1 has the lowest priority, followed by 0, and finally from 2 to 7 in increasing order of priority.
Permit untagged device in P6 to access router	Select to allow untagged hosts connected to LAN port P6 to access the router. In case you have incorrectly configured VLAN functionality, you will still be able to access the router via the Web UI, and telnet and SSH shells to adjust the configuration.

Info

Leave one VLAN untagged at least to prevent from not connecting to Vigor router due to unexpected error.

Inter-LAN Routing

The Vigor router supports up to 15 VLANs. Each VLAN can be set up to use one or more of the Ethernet ports and wireless LAN Service Set Identifiers (SSIDs). Within the grid of VLANs (horizontal rows) and LAN interfaces (vertical columns),

- all hosts within the same VLAN (horizontal row) are visible to one another
- all hosts connected to the same LAN or WLAN interface (vertical column) are visible to one another if
 - they belong to the same VLAN, or
 - they belong to different VLANs, and inter-LAN routing (LAN>>General Setup) between them is enabled (see below).

☐ Force router to use "DNS server IP address" settings specified in LAN1

Inter-LAN Routing

OK

Inter-LAN Routing allows different LAN subnets to be interconnected or isolated. It is only available when the VLAN functionality is enabled. In the Inter-LAN Routing matrix, a selected checkbox means that the 2 intersecting LANs can communicate with each other.

Vigor2962 series features a hugely flexible VLAN system. In its simplest form, each of the Gigabit LAN ports can be isolated from each other, for example to feed different companies or departments but keeping their local traffic completely separated.

II-2-3 Bind IP to MAC

This function is used to bind the IP and MAC address in LAN to have a strengthening control in network. With the Bind IP to MAC feature you can reserve LAN IP addresses for LAN clients. Each reserved IP address is associated with a Media Access Control (MAC) address.

Click **LAN** and click **Bind IP to MAC** to open the setup page.

LAN >> Bind IP to MAC

Bind IP to MAC

☐ Enable ☒ Disable

☐ Strict Bind

Apply Strict Bind to Subnet

ARP Table | [Select All](#) | [Sort](#) | [Refresh](#) | [Add/Update to IP Bind List](#)

IP Address	Mac Address	HOST ID
192.168.1.9	60-A4-4C-E6-5A-4F	

Max: 12 characters

IP Bind List (Limit: 1024 entries) | [Select All](#) | [Sort](#)

Index	IP Address	Mac Address	Host ID	Comment

Backup IP Bind List : **Upload From File:** 未選擇任何檔案

Note:

1. IP-MAC binding presets DHCP Allocations.
2. If Strict Bind is enabled, unspecified LAN clients in the selected subnets cannot access the Internet.
3. Comment can not contain characters " and '.

OK

Available settings are explained as follows:

Item	Description
Enable	MAC addresses that have an IP address assigned on this page will receive that IP address through DHCP.
Disable	MAC address-to-IP address bindings configured on this page are ignored by the DHCP server when assigning IP addresses through DHCP.
Strict Bind	LAN clients will be assigned IP addresses according to the MAC-to-IP address associations on this page. LAN client whose MAC address has not been bound to an IP address will

	be denied network access. Note: Before selecting Strict Bind, make sure at least one valid MAC address has been bound to an IP address. Otherwise no LAN clients will have network access, and it will not be possible to connect to the router to make changes to its configuration. Apply Strict Bind to Subnet-Select the subnet(s) for applying the rules of Bind IP to MAC. 
ARP Table	This table is the LAN ARP table of this router. The information for IP and MAC will be displayed in this field. Each pair of IP and MAC address listed in ARP table can be selected and added to IP Bind List by clicking Add below.
Select All	Select all entries in the ARP Table for manipulation.
Sort	Sort the entries in the ARP Table by IP address.
Refresh	Refresh the screen to reflect the current state of the ARP table.
Add or Update to IP Bind List	IP Address – Enter the IP address to be associated with a MAC address. Mac Address – Enter the MAC address of the LAN client's network interface. Comment – Optional comment field to identify this IP Address – MAC Address pair.
Add	It allows you to add the one you choose from the ARP table or the IP/MAC address typed in Add and Edit to the table of IP Bind List .
Update	It allows you to edit and modify the selected IP address and MAC address that you create before.
Delete	You can remove any item listed in IP Bind List . Simply click and select the one, and click Delete . The selected item will be removed from the IP Bind List .
IP Bind List	It displays a list for the IP bind to MAC information.
Backup IP Bind List	Click Backup and enter a filename to back up IP Bind List to a file.
Upload From File	Click Browse... to select an IP Bind List backup file. Click Restore to restore the backup and overwrite the existing

	list.

Info

Before you select Strict Bind, you have to bind one set of IP/MAC address for one PC. If not, no one of the PCs can access into Internet. And the web user interface of the router might not be accessed.

When you finish the configuration, click **OK** to save the settings.

II-2-4 Port Mirror/Packet Capture

The **LAN Port Mirror** function allows network traffic of select LAN ports to be forwarded to another LAN port for analysis. This is useful for enforcing policies, detecting unauthorized access, monitoring network performance, etc.

Select **LAN>>LAN Port Mirror** from the menu bar of the Web UI to bring up the **LAN Port Mirror** configuration page.

If selecting "Continuously Send All Packets to Mirror Port", the setting page will be shown as follows:

LAN >> Port Mirror/Packet Capture

- ☒ Continuously Send All Packets to Mirror Port
☐ Download .pcap

☒ Enable ☐ Disable

	P1 WAN1	P2 WAN2	P3 LAN	P4 LAN	P5 LAN	P6 LAN
Mirror Port			☐	☐	☐	☐
Mirrored Tx Port	☐	☐	☐	☐	☐	☐
Mirrored Rx Port	☐	☐	☐	☐	☐	☐

OK

Available settings are explained as follows:

Item	Description
Continuously Send All Packets to Mirror Port	Select to send all packets to mirror port.
Enable/Disable	Select Enable to activate the function. Select Disable to cancel the function.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.
OK	Save the settings.

If selecting "Download .pcap", the setting page will be shown as follows:

LAN >> Port Mirror/Packet Capture

- ☐ Continuously Send All Packets to Mirror Port
☒ Download .pcap

	P1 WAN1	P2 WAN2	P3 LAN	P4 LAN	P5 LAN	P6 LAN

After finishing all the settings here, please click **OK** to save the configuration.

II-2-5 PPPoE Server

LAN users can access into Internet through built-in PPPoE server on Vigor router. PPPoE server is a mechanism which can authenticate LAN users (configured in **User Management>>User Profile**) and prevent ARP attack completely.

LAN >> PPPoE Server

PPPoE Server

PPPoE Server:	☒ Disable ☐ Enable
Primary DNS:	0.0.0.0
Secondary DNS:	0.0.0.0

OK

Available settings are explained as follows:

Item	Description
PPPoE Server	Enable - Activate the built-in PPPoE Server. Disable - Disable the built-in PPPoE Server.
Primary DNS / Secondary DNS	Type the IP address(es) of Primary /Secondary DNS server for PPPoE Client(s) in LAN.

After finishing all the settings here, please click **OK** to save the configuration.

II-3 NAT

Most ISPs allocate one WAN IP address to each subscriber. In order to simultaneously connect multiple devices to the Internet, a technique called Network Address Translation is employed.

Usually, the router serves as an NAT (Network Address Translation) router. NAT is a mechanism that one or more private IP addresses can be mapped into a single public one. Public IP address is usually assigned by your ISP, for which you may get charged. Private IP addresses are recognized only among internal hosts.

When the outgoing packets destined to some public server on the Internet reach the NAT router, the router will change its source address into the public IP address of the router, select the available public port, and then forward it. At the same time, the router shall list an entry in a table to memorize this address/port-mapping relationship. When the public server response, the incoming traffic, of course, is destined to the router's public IP address and the router will do the inversion based on its table. Therefore, the internal host can communicate with external host smoothly.

The benefit of the NAT includes:

- **Save cost on applying public IP address and apply efficient usage of IP address.** NAT allows the internal IP addresses of local hosts to be translated into one public IP address, thus you can have only one IP address on behalf of the entire internal hosts.
- **Enhance security of the internal network by obscuring the IP address.** There are many attacks aiming victims based on the IP address. Since the attacker cannot be aware of any private IP addresses, the NAT function can protect the internal network.

Info

On NAT page, you will see the private IP address defined in RFC-1918. Usually we use the 192.168.1.0/24 subnet for the router. As stated before, the NAT facility can map one or more IP addresses and/or service ports into different specified services. In other words, the NAT function can be achieved by using port mapping methods.

Web User Interface

II-3-1 Port Redirection

Port Redirection is usually set up for server related service inside the local network (LAN), such as web servers, FTP servers, E-mail servers, etc. Most of the case, you need a public IP address for each server and this public IP address/domain name are recognized by all users. Since the server is actually located inside the LAN, the network well protected by NAT of the router, and identified by its private IP address/port, the goal of Port Redirection function is to forward all access request with a public IP address from external users to the mapping private IP address/port of the server.

That is, it allows a range of ports to be mapped to a port across a range of local IP addresses. For example, ports 80 through 89 (a total of 10 ports) can be mapped to port 80 LAN clients 192.168.1.20 through 192.168.1.29 (a total of 10 IP addresses). Henceforth all WAN-to-LAN traffic from ports 80 to 89 will be sent to the respective LAN clients.

The port redirection can only apply to incoming traffic.

To use this function, please go to **NAT** page and choose **Port Redirection** web page. The **Port Redirection Table** provides 100 port-mapping entries for the internal hosts.

Protocol	TCP ▼	
WAN Interface	ALL ▼	
Public Port	0	
Source IP	IP Object ▼	None ▼
Private IP		
Private Port	0	

Note:

In "Range" Mode the End IP will be calculated automatically once the Public Port and Start IP have been entered.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable the port redirection setting.
Mode	Allows a single port or a range of ports to be redirected. Single - redirects one single port. Range - redirects a contiguous range of ports.
Service Name	Enter the description of the specific network service.
Protocol	The protocol to which this rule applies, TCP or UDP.
WAN Interface	WAN interface(s) to which this rule applies. WAN # - Traffic from the selected WAN interface will be redirected. ALL - Traffic from all WAN interfaces will be redirected.
Public Port	Specify which port can be redirected to the specified Private IP and Port of the internal host. If you choose Range as the port redirection mode, you will see two boxes on this field. Enter the required number on the first box (as the starting port) and the second box (as the ending port).
Source IP	IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Private IP	The LAN IP address or range of IP addresses to which the traffic is redirected. In the case of a range, only the beginning IP address needs to be entered. The ending IP address will automatically be derived from the number of public ports.
Private Port	The port on each LAN client to which the traffic will be directed to.

After finishing all the settings here, please click **OK** to save the configuration.

Note that the router has its own built-in services (servers) such as Telnet, HTTP and FTP etc. Since the common port numbers of these services (servers) are all the same, you may need to reset the router in order to avoid confliction.

For example, the built-in web user interface in the router is with default port 80, which may conflict with the web server in the local network, http://192.168.1.13:80. Therefore, you need to **change the router's http port to any one other than the default port 80** to avoid conflict, such as 8080. This can be set in the **System Maintenance >>Management Setup**. You then will access the admin screen of by suffixing the IP address with 8080, e.g., http://192.168.1.1:8080 instead of port 80.

II-3-2 DMZ Host

As mentioned above, **Port Redirection** can redirect incoming TCP/UDP or other traffic on particular ports to the specific private IP address/port of host in the LAN. However, other IP protocols, for example Protocols 50 (ESP) and 51 (AH), do not travel on a fixed port. Vigor router provides a facility **DMZ Host** that maps ALL unsolicited data on any protocol to a single host in the LAN. Regular web surfing and other such Internet activities from other clients will continue to work without inappropriate interruption. **DMZ Host** allows a defined internal user to be totally exposed to the Internet, which usually helps some special applications such as Netmeeting or Internet Games etc.

The security properties of NAT are somewhat bypassed if you set up DMZ host. We suggest you to add additional filter rules or a secondary firewall.

Click **DMZ Host** to open the following page. You can set different DMZ host for each WAN interface. Click the WAN tab to switch into the configuration page for that WAN.

NAT >> DMZ Host Setup

DMZ Host Setup

WAN1	WAN2
WAN 1	
None ▼	
Private IP	Choose IP

OK

Available settings are explained as follows:

Item	Description
WAN 1	Enables or disables DMZ host.. None - Disables DMZ host function. Private IP - Allows WAN traffic to be sent to a specific LAN IP address.
Private IP	If Private IP mode has been selected, click the Choose IP button to select a LAN IP address.
Choose IP	Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.  When you have selected one private IP from the above dialog, the IP address will be shown on the following screen. Click OK to save the setting. 

DMZ Host for WAN2 is slightly different with WAN1.

See the following figure.

NAT >> DMZ Host Setup

Available settings are explained as follows:

Item	Description
Enable	Check to enable the DMZ Host function.
Aux. WAN IP	Displays the alias WAN IP.
Private IP	Enter the private IP address of the DMZ host, or click Choose PC to select one.
Choose IP	Click this button and then a window will automatically pop up, as depicted below. The window consists of a list of private IP addresses of all hosts in your LAN network. Select one private IP address in the list to be the DMZ host.  When you have selected one private IP from the above dialog, the IP address will be shown on the screen. Click OK to save the setting.

After finishing all the settings here, please click **OK** to save the configuration.

II-3-3 Open Ports

The Open Ports function allows inbound traffic from specific ports on WAN interfaces to be forwarded to LAN clients. Unlike Port Redirection, LAN client ports cannot be remapped and must remain identical to the opened ports on the WAN interface.

It allows you to open a range of ports for the traffic of special applications.

The common application of Open Ports includes P2P application (e.g., BT, KaZaA, Gnutella, WinMX, eMule, and others), Internet Camera, etc. Ensure that you keep the application involved up-to-date to avoid falling victim to any security exploits.

II-3-4 Port Triggering

If you run programs that function as server applications where they expect to receive unsolicited traffic from the WAN, you can set up rules in Port Triggering to detect LAN-to-WAN traffic initiated by those programs, and automatically open up WAN ports to accept incoming traffic and forward it to the LAN client running the server applications.

Port Triggering is a variation of open ports function.

The key difference between "open port" and "port triggering" is:

- Once the OK button is clicked and the configuration has taken effect, "open port" keeps the ports opened forever.
- Once the OK button is clicked and the configuration has taken effect, "port triggering" will only attempt to open the ports once the triggering conditions are met.
- The duration that these ports are opened depends on the type of protocol used. The "default" durations are shown below and these duration values can be modified via telnet commands.

TCP: 86400 sec.

UDP: 180 sec.

IGMP: 10 sec.

TCP WWW: 60 sec.

TCP SYN: 60 sec.

Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable rule.
Service	Select from list of predefined service, or User Defined to manually configure triggering and incoming protocols and ports.
Comment	Enter the text to memorize the application of this rule.
Source IP	Any - Any IP can be used as the source IP. IP Object - Use the drop down list to specify an IP object profile. IP Group - Use the drop down list to specify an IP group profile.
Triggering Protocol	The protocol(s) of the outgoing traffic that this rule monitors. TCP - monitor only TCP traffic. UDP - monitor only UDP traffic. TCP/UDP - monitor both TCP and UDP traffic.
Triggering Port	Outgoing traffic destined for these port numbers will trigger the opening WAN ports to incoming traffic. Enter the port or port range for such triggering profile.
Incoming Protocol	The protocol(s) of the incoming traffic. TCP -open port(s) to TCP traffic. UDP - open port(s) to UDP traffic. TCP/UDP - open port(s) to both TCP and UDP traffic. Select the protocol (TCP, UDP or TCP/UDP) for the incoming data of such triggering profile.
Incoming Port	Incoming traffic from the WAN destined for these port

	numbers be forwarded to the LAN client that triggered the rule. Enter the port or port range for the incoming packets.

After finishing all the settings here, please click **OK** to save the configuration.

Open Port and Port Triggering Compared

Port Triggering	Open Port
Ports are opened when the triggering condition is met.	Ports are always open on the WAN interface. Opened ports will be closed after predefined durations have elapsed. Default duration values vary depending on the protocol and traffic content: ● TCP (all TCP ports, except those that pass HTTP and HTTPS traffic): 86400 seconds ● UDP: 180 seconds ● TCP WWW (TCP ports that engage in HTTP and HTTPS communication): 60 seconds ● TCP SYN: 60 seconds (SYN packets expire after 60 seconds) These values can be changed by using the command line interface (telnet or SSH).

II-3-5 ALG

ALG means **Application Layer Gateway**. There are two methods provided by Vigor router, RTSP (Real Time Streaming Protocol) ALG and SIP (Session Initiation Protocol) ALG, for processing the packets of voice and video.

RTSP ALG makes RTSP message, RTCP message, and RTP packets of voice and video be transmitted and received correctly via NAT by Vigor router.

However, SIP ALG makes SIP message and RTP packets of voice be transmitted and received correctly via NAT by Vigor router.

NAT >> ALG

ALG (Application Layer Gateway)
[Set to Factory Default](#)

☒ Enable ALG

☐ Enable	Protocol	Listen Port	TCP	UDP
☐	SIP	5060 (1~65535)	☒	☒
☐	RTSP	554 (1~65535)	☒	☒

OK

Available settings are explained as follows:

Item	Description
Enable ALG	Check to enable such function.

Listen Port	Type a port number for SIP or RTSP protocol.
TCP	Check the box to make correspond protocol message packet from TCP transmit and receive via NAT.
UDP	Check the box to make correspond protocol message packet from UDP transmit and receive via NAT.

II-4 Applications

Dynamic DNS

Most ISPs assigns dynamic WAN IP addresses to their customers. Dynamic IP addresses presents challenges to users who would like to accept remote connections to their LANs from the Internet, as service could be disrupted due to the IP address changing without notice. By setting up service with a Dynamic DNS (DDNS) provider, and configuring Dynamic DNS updates on the Vigor router, you can have reliable access to your network by means of an easy-to-remember domain address that resolves to the most current WAN IP address.

The Vigor router supports a wide range of DDNS providers, such as DynDNS, No-IP.com, DtDNS, and ChangeIP. Please contact the DDNS provider of your choice to set up service before configuring DDNS on the router.

LAN DNS / DNS Forwarding

LAN DNS allows the network administrator to override standard DNS resolutions for selecting domain addresses. The router will respond to queries on matched domain addresses with custom IP addresses.

DNS Forwarding allows the network administrator to forward DNS queries to different DNS servers based on the domain name.

LAN DNS and DNS Forwarding only affect DNS queries that are sent to the WAN through the router. DNS queries that are directed to a DNS server on the LAN will not be intercepted by the router.

Schedule

The Vigor router has a built-in clock which can update itself manually or automatically by means of Network Time Protocols (NTP). As a result, you can not only schedule the router to dialup to the Internet at a specified time, but also restrict Internet access to certain hours so that users can connect to the Internet only during certain hours, say, business hours. The schedule is also applicable to other functions.

RADIUS/TACACS+

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

LDAP /Active Directory Setup

Lightweight Directory Access Protocol (LDAP) is a communication protocol for using in TCP/IP network. It defines the methods to access distributing directory server by clients, work on directory and share the information in the directory by clients. The LDAP standard is established by the work team of Internet Engineering Task Force (IETF).

As the name described, LDAP is designed as an effect way to access directory service without the complexity of other directory service protocols. For LDAP is defined to perform, inquire and modify the information within the directory, and acquire the data in the directory

securely, therefore users can apply LDAP to search or list the directory object, inquire or manage the active directory.

UPnP

The Vigor supports UPnP (Universal Plug and Play), which is a suite of network protocols that simplifies network configuration. Applications and network devices on the LAN, that support UPnP, may request the router to modify its settings to allow NAT Traversal, so that WAN hosts can connect to them directly.

Examples of applications and devices that support UPnP include file-sharing applications such as uTorrent, Vuze and eMule, gaming consoles such as the Sony PlayStations 3 and 4 Xbox 360 and Xbox One, media streaming applications such as Plex and XBMC, and messaging and calling applications such as Skype. To find out if a certain application or network device supports or requires UPnP, please consult its user manual or check with its vendor.

Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to woken from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

Web User Interface

II-4-1 Dynamic DNS

Enable the Function and Add a Dynamic DNS Account

To begin configuring Dynamic DNS, from the main menu, navigate to **Applications**, and select **Dynamic DNS**. The Dynamic DNS main configuration screen appears:

Applications >> Dynamic DNS Setup

Dynamic DNS Setup | [Set to Factory Default](#) |

☐ Enable Dynamic DNS Setup [View Log](#) [Force Update](#)

Auto-Update interval Min(s) (180~14400)

Server Response:

Login Name: chronic6653 (max. 64 characters)

Password: (max. 23 characters)

☐ Wildcards

☐ Backup MX

Mail Extender:

Determine Real WAN IP: Internet IP

OK Clear Cancel

Available settings are explained as follows:

Item	Description

Enable Dynamic DNS Account	Select to enable this DDNS profile.
WAN Interface	Select the WAN interface to monitor for IP address changes. WANx First – The specified WAN interface will be examined first. If it is online, its IP address will be used in the DDNS update. WANx Only – Only the specified WAN interface will be examined. If the WAN interface is online, its IP address will be used in the DDNS update. Otherwise no update will be performed for this DDNS profile.
Service Provider	Select the DDNS provider. If your DDNS provider is not listed, select User-Defined and manually configure the profile.  ● Provider Host - Enter the IP address or the domain name of the host which provides related service. Note that such option is available when Customized is selected as Service Provider. ● Service API - Enter the API information obtained from DDNS server. Note that such option is available when Customized is selected as Service Provider. (e.g: /dynamic/dns/update.asp?u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP###&cmd=update&offline=0) ● Auth Type - Two types can be used for authentication. Basic – Username and password defined later can be shown from the packets captured. URL – Username and password defined later can be shown in URL. (e.g., http://ns1.vigorddns.com/ddns.php?username=xxxx&password=xxxx&domain=xxxx.vigorddns.com) Note that such option is available when Customized is selected as Service Provider. ● Connection Type - There are two connection types (HTTP and HTTPS) to be specified. Note that such option is available when Customized is selected as Service Provider. ● Server Response - Type any text that you want to receive from the DDNS server. Note that such option is available when Customized is selected as Service Provider. If other service provider is selected, you have to configure Service Type, Domain Name, Login Name and Password. ● Service Type - Select the service type that matches that of your DynDNS account. If you are unsure which service type to select, try Dynamic first. This options is

	applicable to DynDNS only. ● Domain Name - The domain and subdomain to be updated.
Login Name	The login name of the DDNS account.
Password	The password of the DDNS account.
Wildcard and Backup MX	The Wildcard and Backup MX (Mail Exchange) features are not supported for all Dynamic DNS providers. You could get more detailed information from their websites.
Mail Extender	If the mail server is defined with another name, please enter the name in this area. Such mail server will be used as backup mail exchange.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: ● WAN IP - The IP address of the router's WAN interface will be used. ● Internet IP - The real public IP address will be used. Select this option if the IP address assigned to the router's WAN interface is not the actual external IP address.

Click **OK** to save changes, **Clear** to clear all settings, or **Cancel** to discard changes and return to the main DDNS screen.

DrayDDNS Settings

DrayDDNS, a new DDNS service developed by DrayTek, can record multiple WAN IP (IPv4) on single domain name. It is convenient for users to use and easily to set up. Each Vigor Router is available to register one domain name.

Choose **DrayTek Global** as the service provider, the web page will be displayed as follows:

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

☒ Enable Dynamic DNS Account

Service Provider: DrayDDNS (Global) Wizard View Log

Status: Inactivated

Domain Name: .drayddns.com

Determine WAN IP: WAN IP ☒ IPv4 ☐ IPv6

WAN Interfaces: ☐ WAN 1 ☐ WAN 2 ☐ Alias IP in [Service Status Setup](#)

Let's Encrypt certificate:

Status: Empty Create

Auto Renew: ☐

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Dynamic DNS Account	Check this box to enable the current account. If you did check the box, you will see a check mark appeared on the Active column of the previous web page in step 2).
Service Provider	Choose DrayTek Global as the service provider. Wizard – This button is available when DrayTek Global is selected as Service Provider. To activate the DrayTek's DDNS service, click it to enable license issued by DrayTek through Wizards>>Service Activation Wizard . Refer to section A-1 How to use DrayDDNS? for detailed information.
Status	Display if the license is actvtaed or not.
Domain Name	The domain and subdomain to be updated.
Determine WAN IP	If a Vigor router is installed behind any NAT router, you can enable such function to locate the real WAN IP. When the WAN IP used by Vigor router is private IP, this function can detect the public IP used by the NAT router and use the detected IP address for DDNS update. There are two methods offered for you to choose: ● WAN IP - If it is selected and the WAN IP of Vigor router is private, DDNS update will take place right away. ● Internet IP – If it is selected and the WAN IP of Vigor router is private, it will be converted to public IP before DDNS update takes place.
WAN Interfaces	WANx - While connecting, the router will use WANx as the channel for such account.
Let's Encrypt certificate	Create – Click it to generate a certificate issued by Let's Encrypt for applying to such DDNS account. Auto Renew – Check the box to make the system update the

	certificate automatically.

Disable the Function and Clear all Dynamic DNS Accounts

Uncheck **Enable Dynamic DNS Setup**, and click **Clear All** button to disable the function and clear all accounts from the router.

Delete a Dynamic DNS Account

Click the **Index** number you want to delete and then click **Clear All** button to delete the account.

DDNS updates take place when:

- The router is powered on or rebooted.
- The public IP address of any WAN interface changes.
- The online status of a WAN interface changes (going from online to offline or vice versa).
- The DDNS function is changed from disabled to enabled.
- A DDNS entry is modified and enabled.
- The Auto-Update Interval has elapsed.

Procedures for Setting up a Dynamic DNS Entry

1. Contact the dynamic DNS provider of your choice and have service set up. Most DDNS providers accept signups on their websites. Service could be provided free of charge or for a fee.
2. Create a DDNS entry on the router by selecting the appropriate DDNS provider and enter the account information.
3. Make sure that both the DDNS entry and the DDNS feature are enabled on the router.
4. Click the View Log button on the DDNS main page to bring up the update log.
5. Examine the update log to make sure the update was successful.
6. If the update was not successful, verify the DDNS entry to make sure the settings are entered correctly.

II-4-2 LAN DNS / DNS Forwarding

LAN DNS lets the network administrators host servers with privacy and security. When the network administrators of your office set up FTP, Mail or Web server inside LAN, you can specify specific private IP address (es) to correspondent servers. Thus, even the remote PC is adopting public DNS as the DNS server, the LAN DNS resolution on Vigor2962 series will respond the specified private IP address.

To start configuring LAN DNS or DNS Forwarding, from the main menu, click **Applications**, followed by **LAN DNS / DNS Forwarding**.

Applications >> LAN DNS / DNS Forwarding

LAN DNS Resolution / Conditional DNS Forwarding

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Click to clear all profiles to factory settings.

CNAME	Click Add to add a domain name alias for the domain name. Click Delete next to an alias entry to delete it.
IP Address List	The IP address listed here will be used for mapping with the domain name specified above. In general, one domain name maps with one IP address. If required, you can configure two IP addresses mapping with the same domain name. Add –Click Add to bring up the Add IP Address dialog box:  ● Host's IP Address – Enter the IP address to be returned in response to a DNS query for the configured domain names and aliases. ● Only responds to the DNS.... – Select to use this IP address only if the IP address of the source of the DNS query belongs to the same subnet as the host IP address entered above. After changes have been made, click OK to save and dismiss the dialog box, or Close to discard the changes and dismiss the dialog box. Delete –To delete an IP address, click on it and then click Delete.

To save changes made to the LAN DNS profile, click **OK**. To clear the profile and restore the factory default blank values, click **Clear**.

If you need to configure LAN DNS settings, click index 1 to edit the LAN DNS profile just created. Or, you can click index 2 to use this profile as conditional DNS forwarding.

Applications >> LAN DNS / DNS Forwarding

LAN DNS	Conditional DNS Forwarding
Profile Index : 1 ☐ Enable Profile: Domain Name: Note: Support wildcard subdomain, ex: *.example.com DNS Server IP Address: OK Clear	

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable such profile.
Profile	Type a name for such profile. Note: If you type a name here for conditional DNS forwarding and click OK to save the configuration, the name also will be applied to LAN DNS automatically.
Domain Name	Enter the domain name for such profile.
DNS Server IP Address	Enter the IP address of the DNS server you want to use for DNS forwarding.

To save changes made to the LAN DNS profile, click **OK**. To clear the profile and restore the factory default blank values, click **Clear**.

II-4-3 DNS Security

Domain Name System Security Extensions (DNSSEC) protects against DNS-based attacks by authenticating DNS responses from DNS resolvers.

The DNS servers must support DNS security validation for the feature to function properly.

To configure DNS security, from the main menu, click **Applications**, followed by **DNS Security**.

II-4-3-1 General Setup

All of WAN interfaces of Vigor router can be configured with DNS Security enabled respectively.

Application >> DNS Security

DNS Security

General Setup		Domain Diagnosis		Refresh
Interface	Enable	Primary DNS	Secondary DNS	Bogus DNS Reply
WAN1	☐	---	---	Pass ▼
WAN2	☐	---	---	Pass ▼

Note:

The DNS server supports DNSSEC

The DNS server does not support DNSSEC, function may not work as expected even if it is enabled

OK

Available settings are explained as follows:

Item	Description
Interface	The WAN interface name for which DNS security is to be configured.
Enable	Select to enable DNS security for this WAN Interface.
Primary DNS	Shows the primary DNS server IP address in effect for this WAN.
Secondary DNS	Shows the secondary DNS server IP address in effect for this WAN.
Bogus DNS Reply	Show action to be taken for DNS responses that fail authentication. Choose Pass or Drop. Pass – Pass DNS result. Drop – Do not pass DNS result.

Press **OK** to save changes.

II-4-3-2 Domain Diagnose

While using the Domain Diagnose feature, you can check to see if the router's DNS security function is working properly, or whether a given domain is secured by DNS security. Note that DNS Security has to be first enabled or the test results would not be meaningful.

Application >> DNS Security

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable Schedule Setup	Select to enable the schedule; clear to disable it.
Comment	Name to identify this schedule entry.
Start Date (yyyy-mm-dd)	The date when the entry comes into effect.
Start Time (hh:mm)	The time when the schedule is triggered. See the How Often setting below for details.
Duration Time (hh:mm)	How long the action lasts when the scheduled is triggered.
End Time (hh:mm)	It will be calculated automatically when Start Time and Duration Time are configured well.
Action	Action to take when the schedule is triggered. Force On – The feature with which this schedule is associated will be turned on. Force Down – The feature with which this schedule is associated will be turned off.
How Often	How frequently the schedule is triggered. ● Once - The schedule is triggered once, on the Start Date at the Start Time, for the Duration Time. ● Weekdays - The schedule will be triggered repeatedly, starting on the Start Date at the Start Time, on the selected days of the week, at the Start Time, for the Duration Time.

	● Monthly, on date - The router will only execute the action applied such schedule on the date (1 to 28) of a month. ● Cycle duration - Type a number as cycle duration. Then, any action applied such schedule will be executed per several days. For example, "3" is selected as cycle duration. That means, the action applied such schedule will be executed every three days since the date defined on the Start Date.

To save changes made to the Schedule, click **OK**. To clear the schedule and restore the factory default blank values, click **Clear**. To cancel the changes and return to the main Schedule page, click **Cancel**.

Example

Suppose you want to control the PPPoE Internet access connection to be always on (Force On) from 9:00 to 18:00 for whole week. Other time the Internet access connection should be disconnected (Force Down).

Office

Hour:

(Force On)

Mon - Sun

9:00 am

to

6:00 pm

1. Make sure the PPPoE connection and **Time Setup** is working properly.
2. Configure the PPPoE always on from 9:00 to 18:00 for whole week.
3. Configure the **Force Down** from 18:00 to next day 9:00 for whole week.
4. Assign these two profiles to the PPPoE Internet access profile. Now, the PPPoE Internet connection will follow the schedule order to perform **Force On** or **Force Down** action according to the time plan that has been pre-defined in the schedule profiles.

II-4-5 RADIUS/TACACS+

Remote Authentication Dial-In User Service (RADIUS) is a security authentication client/server protocol that supports authentication, authorization and accounting, which is widely used by Internet service providers. It is the most common method of authenticating and authorizing dial-up and tunneled network users.

The router supports external TACACS+ and internal and external RADIUS servers for user authentication. To configure RADIUS or TACACS+ servers, from the Main Menu select **Applications >> RADIUS/TACACS+**.

II-4-5-1 External RADIUS

The built-in RADIUS client feature enables the router to assist the remote dial-in user or a wireless station and the RADIUS server in performing mutual authentication. It enables centralized remote access authentication for network management.

Vigor router can be operated as a RADIUS client. This web page is used to configure settings for external RADIUS server. Then LAN users of Vigor router will be authenticated and accounted by such server for network application.

Select External RADIUS to configure the router to use an external RADIUS server for user authentication.

Applications >> RADIUS/TACACS+

Available settings are explained as follows:

Item	Description
Enable this profile	Check to enable RADIUS client profile. Comments - Enter a brief description for this profile.
Enable Accounting	After checking it, Vigor router supports the accounting feature (available seconds for using, quantity of RX/TX data) for external RADIUS server. Any client tries to access the Internet shall be authenticated and accounted by an external RADIUS server. Accounting Port -The UDP port number that the RADIUS server is using. The default value is 1813, based on RFC 2138. Disconnect Message Port - Set a port number for listening the RADIUS disconnection message. Interim Update Interval - Set a time interval for sending the accounting request to the RADIUS server. Applications >> RADIUS/TACACS+ >> Profile 1 ☒ Enable this profile ☒ Enable Accounting Comments: Primary Server Primary Server Secret Authentication Port 1812 Accounting Port 1813 Disconnect Message Port 3799 Interim Update Interval 10 min(s)(10~1440) Retry 2 times(1~3)

Primary Server	Primary Server - Enter the IP address of RADIUS server. Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters. Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138. Retry - Set the number of attempts to perform reconnection with RADIUS server. If the connection (with the Primary Server) still fails, stop the connection attempt and begin to make connection with the secondary server.
Secondary Server	Secondary Server - Enter the IP address of RADIUS server. Secret - The RADIUS server and client share a secret that is used to authenticate the messages sent between them. Both sides must be configured to use the same shared secret. The maximum length of the shared secret you can set is 36 characters. Authentication Port - The UDP port number that the RADIUS server is using. The default value is 1812, based on RFC 2138. Retry - Set the number of attempts to perform reconnection. If the connection (with the Secondary Server) still fails, stop the connection attempt. The client authentication would be determined as "failed".
RADIUS Server Status Log	Display the record of current status of RADIUS server.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To reset all settings to blank, click **Clear**.

II-4-5-2 Internal RADIUS

Except for being a built-in RADIUS client, Vigor router also can be operated as a RADIUS server which performs security authentication by itself. This page is used to configure settings for internal RADIUS server. Then LAN user of Vigor router will be authenticated by Vigor router directly.

Select Internal RADIUS to configure the router's built-in RADIUS server.

External RADIUS

User Profile

Available List

Authentication List

☐ Synchronize Internal RADIUS user list to Local 802.1X user list.

Note:

- Only the user profiles which is enabled in [User Management >> User Profile](#) will be listed here, and it shows in the [System Maintenance >> Internal Service User List](#).
- RADIUS Client Access List is first match.

Available settings are explained as follows:

Item	Description
Enable	Select to enable the router's internal RADIUS server.
Authentication Port	The UDP port for authentication messages.
RADIUS Client Access List	Only clients that meet the criteria configured in the access list are allowed to access the RADIUS server. Enable - Select to enable this client entry. Shared Secret - A text string that is known to both the router's RADIUS server and the RADIUS client that is used to authenticate messages sent between them. Maximum length

	is 36 characters. IP Address - Base address of the IP block. IP Mask - Enter the IP mask to configure the size of the IP block. IPv6 Address - Base address of the IPv6 block. IPv6 Length - The prefix length of the IPv6 block.
Authentication	Configures the authentication settings. Specify the way to authenticate the client. PAP - Only the Password Authentication Protocol will be used to validate users. PAP/CHAP/MS-CHAP/MS-CHAPv2 - PAP, CHAP (Challenge-Handshake Authentication Protocol), and Microsoft versions of CHAP can be used to validate users. Support 802.1X Method - The built in RADIUS server offered by Vigor router can act as the AAA server. Select to enable 802.1X support.
User Profile	During the process of security authentication, user account and user password will be required for identity authentication. Before configuring such page, create at least one user profile in User Management>>User Profile first. Select All - Click to move all user profiles under the Available List to the Authentication List. Clear All - Click to remove all user profiles from the Authentication List. Available List - The user profiles without RADIUS server enabled in User Management >> User Profile will be listed in this field. Authentication List -The user profiles with RADIUS server enabled in User Management >> User Profile will be listed in this field.

To add a User Profile to the RADIUS server, select it under **Available List**, then click the >> button. To remove a User Profile from the RADIUS server, select it under **Selected Authentication List**, then click the << button.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To reset all settings to blank, click **Clear**.

II-4-5-3 External TACACS+

It means Terminal Access Controller Access-Control System Plus. It works like RADIUS does. Click the **External TACACS+** to open the following page:

OK

Clear

Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable the use of an external TACACS+ server.
Server IP Address	The IP address of the TACACS+ server.
Destination Port	The port used by the TACACS+ server. Port 49 is most common.
Shared Secret	A text string that is known to both the TACACS+ server and client (the router) that is used to authenticate messages sent between them. Maximum length is 36 characters.
Confirm Shared Secret	Enter the shared secret again for verification.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To reset all settings to blank, click **Clear**.

II-4-6 Active Directory/LDAP

Lightweight Directory Access Protocol (LDAP) is an industry-standard protocol for maintaining and accessing directory information on a network. When used in conjunction with a Vigor router, LDAP can be used to authenticate VPN connection attempts.

Active Directory (AD) is a directory service from Microsoft that supports LDAP queries.

To configure Active Directory or LDAP settings, from the Main Menu select **Applications >> Active Directory /LDAP**.

II-4-6-1 General Setup

To configure the settings for the LDAP server, select **General Setup**.

Applications >> Active Directory /LDAP

General Setup | Active Directory / LDAP Profiles | [Set to Factory Default](#)

☒ Enable

Bind Type: Simple Mode ▼

Server Address:

Destination Port: 389 ☐ Use SSL

Regular DN:

Regular Password:

OK Cancel

Available settings are explained as follows:

Item	Description
Enable	Select to enable LDAP client.
Bind Type	Select from one of 3 bind types: ● Simple Mode – Initiate bind operation (authentication) without performing user search. This mode can be used when all users belong to the same branch in the LDAP structure. ● Anonymous – Bind anonymously, without supplying the distinguished name (DN) and password, and perform user search. This mode can be used when not all users belong to the same branch and the server allows anonymous searches. ● Regular Mode – Same as Anonymous mode, except that the DN and password are sent to the server. This mode can be used when not all users belong to the same branch and the server does not allow anonymous searches. For the regular mode, you'll need to Enter the Regular DN and Regular Password .
Server Address	The network address of the LDAP server.
Destination Port	The network port that the LDAP server listens on. The default ports are 389 for unsecured connections and 636 for LDAPS

	(LDAP over SSL) connections.
Use SSL	Select to use Secure Sockets Layer (SSL) for LDAP traffic.
Regular DN	Enter the LDAP Distinguished Name for authentication if Bind Type is set to Regular Mode .
Regular Password	Enter the LDAP Password for authentication if Bind Type is set to Regular Mode .

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

II-4-6-2 Active Directory / LDAP Profiles

Up to 8 LDAP profiles can be created. These profiles would be used with User Management for different purposes in management.

Click on the Active Directory / LDAP Profiles to bring up the index page.

Applications >> Active Directory /LDAP

General Setup		Active Directory / LDAP Profiles	Set to Factory Default
Index	Name	Distinguished Name	
1.			
2.			
3.			
4.			
5.			
6.			
7.			
8.			

Available settings are explained as follows:

Item	Description
Index	The index of the LDAP profile. Click to show the profile settings page.
Name	Displays the user-defined name that identifies this entry.
Distinguished Name	Displays the distinguished name (DN) configured in the profile.

To configure an LDAP profile, click on its index to show the following settings page.

Index No. 1

Name	
Common Name Identifier	
Base Distinguished Name	
Additional Filter	
Group Distinguished Name	

Note:

Please type in your additional filter for BaseDN search request. For example, "gidNumber=500" for OpenLDAP, and "msNPAllowDialin=TRUE" for AD.

OK

Cancel

Available settings are explained as follows:

Item	Description
Name	Name that identifies this profile. Maximum length is 19 characters.
Common Name Identifier	The common name attribute, which is typically "cn" in most LDAP configurations.
Base Distinguished Name	The starting point of user search in the LDAP directory, for example, dc=draytek,dc=com.  - click this icon to display a list of valid DNs in the LDAP directory.
Additional Filter	Additional filter to be applied to the search request to identify eligible users. For example, - "OpenLDAP: (gidNumber=500)" Here group ID 500 is the group of dial-in users. - "ActiveDirectory: (msNPAllowDialin=TRUE)" The msNPAllowDialin attribute indicates that the user has permission to dial in remotely.
Group Distinguished Name	The base DN of the tree in the LDAP directory that contains groups, for example, ou=groups,dc=draytek,dc=com.  - click this icon to display a list of valid DNs in the LDAP directory.

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

II-4-7 IGMP

Internet Group Management Protocol (IGMP) is an IPv4 communication protocol for establishing multicast group memberships.

To configure IGMP settings, from the Main Menu select **Applications >> IGMP**.

II-4-7-1 General Setting

Applications >> IGMP

General setting

Working status

☐ **IGMP Proxy**
IGMP Proxy acts as a multicast proxy for hosts on the LAN side. Enable IGMP proxy to access any multicast group. This function **takes no effect when Bridge Mode is enabled**.

Interface

WAN1

IGMP version

Auto

General Query Interval

125

(seconds)

Add PPP header

☐

(Encapsulate IGMP in PPPoE)

Enable IGMP syslog

☐

☐ **IGMP Snooping**
Enable: Forwards multicast traffic only to ports that are members of that group.
Disable: Treats multicast traffic the same as broadcast traffic.

☐ **IGMP Fast Leave**
The router stops forwarding multicast traffic to a LAN port as soon as it receives a leave message from that port.
Each LAN port should have no more than one IGMP host connected.

OK

Cancel

Available settings are explained as follows:

Item	Description
IGMP Proxy	Check this box to enable this function. The application of multicast will be executed through WAN /PVC/VLAN port. In addition, such function is available in NAT mode. Interface – Specify an interface for packets passing through. IGMP version – At present, two versions (v2 and v3) are supported by Vigor router. Choose the correct version based on the IPTV service you subscribe. General Query Interval – Vigor router will periodically check which IP obtaining IPTV service by sending query. It might cause inconvenience for client. Therefore, set a suitable time (unit: second) as the query interval to limit the frequency of query sent by Vigor router. Add PPP header – Check this box if the interface type for IGMP is PPPoE. It depends on the specifications regulated by each ISP. If you have no idea to enable or disable, simply contact your ISP providers. Enable IGMP syslog - Check the box to store the IGMP status onto Syslog.
IGMP Snooping	Select to enable IGMP Snooping so that multicast traffic are forwarded to IGMP clients that have joined a multicast group.

IGMP Fast Leave	This option is shown only when IGMP Snooping is enabled. Select to enable IGMP Fast Leave. Normally when the router receives a “leave” message from an IGMP host, it will send a last member query message to see if there are still members within the multicast group. When Fast Leave is enabled, multicast for a group is immediately terminated when the last host in that group sends a “leave” message.

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

II-4-7-2 Working Group

Displays a list of active multicast groups.

Applications >> IGMP

General setting

Working status

Available settings are explained as follows:

Item	Description
Refresh	Click to reload the Multicast Group Table with the latest information.
Index	Index number of the multicast group.
Group ID	ID port of the multicast group, which is within the IP range reserved for IGMP, 224.0.0.0 through 239.255.255.254.
P3 to P6	LAN ports that have IGMP hosts joined to this multicast group.

II-4-8 Wake on LAN

Using the Wake on LAN (WoL) feature, LAN clients that support WoL can be powered on or resume from sleep over the network, without the need for physical access to the device.

In order for LAN clients to be able to wake from sleep or off states, the network interface card must be configured to monitor Wake-on-LAN messages. Consult the documentation of the LAN client for details on setting up its network interface for Wake on LAN.

If you wish to be able to select the IP address of the Wake-on-LAN client, its MAC address must first be bound to a static IP address using the Bind IP to MAC function.

To configure Wake on LAN settings, from the Main Menu select **Applications >> Wake on LAN**.

Applications >> Wake on LAN

Wake on LAN

Wake by:	MAC Address ▾
IP Address:	---
MAC Address:	: : : : :
Result	
Wake Up!	

Note:

Wake on LAN integrates with [Bind IP to MAC](#) function; only bound PCs can wake up through IP.

Available settings are explained as follows:

Item	Description
Wake by	The type of address of the LAN client to be woken up. ● If you choose Wake by MAC Address, you have to Enter the correct MAC address of the host in MAC Address boxes. ● If you choose Wake by IP Address, you have to choose the correct IP address.
IP Address	The IP addresses that have been configured in Firewall>>Bind IP to MAC will be shown in this drop down list. Select the IP address of the LAN client.
MAC Address	Enter the MAC address of the LAN client.
Wake Up	Click to send Wake-on-LAN message to the specified LAN client.
Result	Result of the transmission of the Wake-on-LAN message.

II-4-9 SMS / Mail Alert Service

You can set up SMS or mail profiles for the router to send events or alerts to designated recipients. Up to 10 SMS profiles and 10 mail profiles can be configured.

II-4-9-1 SMS Alert

To configure SMS alert profiles, select the SMS Alert tab.

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default	
Index	Enable	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)

8	☐	1 - ??? ▼		1 - ??? ▼	None ▼ None ▼
9	☐	1 - ??? ▼		1 - ??? ▼	None ▼ None ▼
10	☐	1 - ??? ▼		1 - ??? ▼	None ▼ None ▼

Note:

All the Mail Alert profiles share the same "Sending Interval" setting if they use the same Mail Server.

OK Cancel

Available settings are explained as follows:

Item	Description
Set to Factory Default	Click to clear all mail alert profiles.
Enable	Select the checkbox to enable the profile.
Mail Service	Select the profile of the mail provider to be used. To set up or modify a mail provider profile, click the hyperlink Mail Service to go to Objects Setting >> SMS/Mail Service Object.
Mail Address	Enter the recipient's email address.
Notify Profile	Select the notification profile to be used. To set up or modify a notification object profile, click the hyperlink Notify Profile to go to Objects Setting >> Notification Object.
Schedule (1-15)	Enter up to 2 schedule profile indexes. To set up or modify schedule profiles, click the hyperlink Schedule(1-15) to go to Applications >> Schedule.

After finishing all the settings here, please click **OK** to save the configuration.

II-4-10 Bonjour

Bonjour is Apple's implementation of zero-configuration networking (Zeroconf), a technology that allows automatic discovery and configuration of network devices and services. Bonjour is built into OS X, and versions for Windows PCs can be downloaded without charge from Apple's website.

Without Bonjour, routers, computers, and other network peripherals would require manual configuration of network settings such as IP addresses and port numbers, which could be complex and cumbersome. By enabling Bonjour on the Vigor router, users only need to know the name of the router in order to set up connectivity between LAN devices, and the router and the peripherals that are connected to it.

To enable the Bonjour service, click **Application>>Bonjour** to open the following page. Check the box(es) of the server service(s) that you want to share to the LAN clients.

Applications >> Bonjour

Bonjour Setup

☐ Enable Bonjour Service

☐ HTTP Server☐ Telnet Server☐ SSH Server

OK

Cancel

Available settings are explained as follows:

Item	Description
Enable Bonjour Service	Select to enable the Bonjour service on the router. The rest of the checkboxes will be enabled for selection when this checkbox has been selected.
HTTP Server	Select to allow the router's HTTP server to be discovered via Bonjour.
Telnet Server	Select to allow the router's telnet server to be discovered via Bonjour.
SSH Server	Select to allow the router's SSH server to be discovered via Bonjour.

Below shows an example for applying the Bonjour feature that Vigor router can be used as the FTP server.

1. Here, we use Firefox and DNSSD to discover the service in such case. Therefore, just ensure the Bonjour client program and DNSSD for Firefox have been installed on the computer.

2. Open the web browser, Firefox. If Bonjour and DNSSD have been installed, you can open the web page (DNSSD) and see the following results.

3. Open **System Maintenance>>Management**. Type a name as the Router Name and click **OK**.

4. Next, open **Applications>>Bonjour**. Check the service that you want to use via Bonjour.

5. Open the DNSSD page again. The available items will be changed as the follows. It means the Vigor router (based on Bonjour protocol) is ready to be used as a printer server, FTP server, SSH Server, Telnet Server, and HTTP Server.

chrome://dnssd/content/browser.html

DNSSD for Firefox

Browser Configuration Options Diagnostic Information

Interface	Name	Type	Domain	Service Info
2	DS1010Plus	_http._tcp.	local.	Select a service on the left to view further details.
2	DS1010Plus(WebDAV)	_http._tcp.	local.	
2	HP LaserJet 1300	_ipp._tcp.	local.	
2	Vigor Router	_ftp._tcp.	local.	
2	Vigor Router	_http._tcp.	local.	
2	Vigor Router	_printer._tcp.	local.	
2	Vigor Router	_ssh._tcp.	local.	
2	Vigor Router	_telnet._tcp.	local.	
2	tctseng-virtual-machine	_udisks-ssh._tcp.	local.	
2	tctseng-virtual-machine [00:0c:29:78:bc:24]	_workstation._tcp.	local.	
2	tomkao-desktop [00:0c:29:26:09:5d]	_workstation._tcp.	local.	

6. Now, any page or document can be printed out through Vigor router (installed with a printer).

II-4-11 High Availability

The High Availability (HA) feature of the router provides redundancy of network resources, and reduces downtime in case of component failure. The level of sophistication of HA is determined by availability requirements and tolerance of system interruptions. Systems that provide near full-time availability typically have redundant hardware and software.

The HA of the Vigor2962 Series is designed to avoid single points-of-failure. When failures occur, the failover process transfers the network load handled by the failed component (the primary router) to the backup component (the secondary router), and the availability of network resources are preserved and partially failed transactions are recovered. In a matter of seconds the system returns to normal operation.

In order to set up High Availability, at least 2 DrayTek routers have to be configured in the following manner:

- Enable High Availability on both the primary and secondary routers.
- Set a high priority ID on the primary router, and a lower priority ID on the secondary router.
- Configure identical redundancy methods, group IDs, and authentication keys on both routers.
- Set the management interface of both routers to the same subnet.
- Enable virtual IP on both routers for each subnet in use. Make sure the virtual IPs are identical on both routers.

II-4-11-1 General Setup

Index	Enable	Virtual IP	
LAN1	☐	192.168.1.2	
LAN2	☐	192.168.2.2	!
LAN3	☐	192.168.3.2	!
LAN4	☐	192.168.4.2	!
LAN5	☐	192.168.5.2	!

Available settings are explained as follows:

Item	Description
Enable High Availability	Select to enable HA function.
Redundancy Method	Select the redundancy method for high availability. Hot-Standby - This method is suitable when there is only one ISP account. When this method is selected, - During normal operation the secondary router will be idling. When the primary router fails to operate normally, the secondary router(s) will take over. - WAN settings of the primary and secondary routers are identical. Note: When Hot-Standby is used, the wireless LAN function on secondary router will be “disabled” directly. Clients can not connect to the secondary router any more. Active-Standby - This method is suitable when there are multiple simultaneously active ISP connections. When this method is selected, - All WANs on the secondary routers can be up at the same time. LANs that are not configured under high availability can be routed to secondary routers. - WAN settings of primary and secondary routers are independently configured.

	● Config Sync may be enabled to synchronize most configuration settings between the primary and secondary routers. ● All routers must be set to the same redundancy method.
Group ID	Enter a value (1~255). All routers having the same group ID belong to the same group.
Priority ID	Enter a value (1~30). Different routers must be configured with different IDs. All routers within a group must be assigned a priority ID. Within a group, the router with the largest priority ID (i.e., the highest priority) will be the primary router. When multiple routers in a group are assigned the same priority ID, routers with lower LAN IP addresses (configured on the LAN >> General Setup page) have higher priority.
Authentication Key	Enter an authentication key up to 31 characters long. This is used to encrypt the DARP (DrayTek Address Redundancy Protocol) traffic to guard against malicious attacks.
Protocol	Select the IP protocol to be used for DARP.
Management Interface	Select the interface to be used for DARP negotiation between routers. Only interfaces which are enabled in LAN>>General Setup are available for selection. However, LAN1 is always enabled.
Update DDNS	Select Enable to update the DDNS server for secondary devices when the primary router fails.
Syslog	Select Enable to have syslog record HA activity.
LAN1 ~ LAN20	Select Enable to include the interface. Virtual IP - Enter the IP address of the router plays the role of Primary device.

When you finish the configuration, please click **OK** to save and exit this page.

II-4-11-2 Config Sync

The synchronization of configuration between high availability routers is configured here.

Applications >> High Availability

☐ Enable High Availability

Redundancy Method Active-Standby ▼

General Setup

Config Sync

| [Status](#) | [Set to Factory Default](#) |

☐ Enable Config Sync (Max. Sync to 10 routers)

Config Sync Interval:

Day

0 ▼

Hour

0 ▼

Minute

15 ▼

Exclude the following settings from config sync:

☒ WAN Settings

Note:

This feature requires that both routers are the same series, and the High Availability must be enabled for Config Sync to operate.

OK

Cancel

Available settings are explained as follows:

Item	Description
Enable Config Sync (Max. Sync to 10 routers)	Select to enable configuration synchronization. All routers to be synchronized must have this checkbox selected. Note that config sync can be enabled by Hot-Standby redundancy method only.
Config Sync Interval	Day / Hour / Minute - The primary router will synchronize its configuration with secondary routers at every specified time interval.
Exclude the following settings from config sync	This setting is available when the Redundancy Method is set to Hot Standby . Select the configuration settings to be excluded from synchronization.

When you finish the configuration, please click **OK** to save and exit this page.

When the configuration method is set to “Hot Standby”, the following settings will not be synchronized:

- WAN (user selectable)
- LAN
- LAN IPv6
- router name
- admin and user passwords

Example:

In the following example, the first Vigor2962 is configured as the primary device, and the other Vigor2962 is the secondary device. When the primary Vigor2962 breaks down, the secondary device assumes the role of the primary device by taking over all responsibilities as soon as possible. However, when the primary device recovers, the secondary device will once again be the standby device.

Application Notes

A-1 How to use High Availability?

High Availability provides hardware redundancy to the LAN clients. DrayTek Router has two modes for High Availability feature: Hot-Standby and Active-Standby.

In Hot-Standby Mode, Primary and Secondary router share the same WAN source. Usually, only the Primary is online. When Primary goes down, Secondary comes up and use the same WAN line to dial up, and continue to provide Internet service to LAN clients.

Active-Standby mode is almost same as Hot-Standby mode, only that in the Active-Standby mode, the Primary and Secondary connect to the different WAN sources; also, the Secondary will always be online.

1. On the primary router, choose Redundancy Method you would like to use, then set the following configurations:

Applications >> High Availability

LAN5	☒	192.168.5.1																			

- (a) Group ID is used to identify who are the group members, enter the same ID on all the members. The default value is 1, we may leave it as default here.
- (b) Priority ID is used to decide which router should be the primary one, and 30 is the highest. If 2 or more routers are having the same Priority ID, their LAN IP addresses (for management Interface) will be considered, e.g., 192.168.1.2 has higher priority than 192.168.1.3..., etc.

- (c) Authentication Key: enter the same authentication key on all the members.
- (d) Management Interface: the packets for communication (including deciding the primary, configuration sync, and some maintenance...,etc) between members will be sent in the management interface, in other word, clients in other LAN subnet won't be able to see these packets. In order to have best communication and for security purpose, we recommend to choose an interface that is less possible to have interruption for the communication (loop/broadcast storm from other LAN clients...). In our scenario, we reserve LAN 1 for High Availability only, and put all other LAN clients in LAN2~LAN5.
- (e) Update DDNS: for dynamic WAN IP users, enable this function so once the secondary router becomes primary and dials up the WAN, it will also update its new WAN IP address to the same DDNS profile, so your network will be accessible with the same DDNS domain.
- (f) Syslog: enable to show all the High Availability related logs in syslog.
- (g) Enable the LAN Subnet to join High Availability. Any existing LAN without joining High Availability will not be served with hardware redundancy.

Virtual IP: name the virtual IP here, please note that the virtual IP can NOT be the same with any member LAN IP.

Applications >> High Availability

☒ Enable High Availability

Redundancy Method Hot-Standby

LAN5	☒	192.168.5.1																						

4. Configuring LAN on the primary router.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup		LAN 1 IPv6 Setup	
Network Configuration		DHCP Server Configuration	
For NAT Usage		☒ Enable Server ☐ Disable Server	
IP Address	192.168.1.2 a.	☐ Enable Relay Agent	
Subnet Mask	255.255.255.0	Start IP Address	192.168.1.10
RIP Protocol Control Disable		IP Pool Counts	200
		Gateway IP Address	192.168.1.2 b.
		(Replaced by HA Virtual IP 192.168.1.1)	
		Lease Time	86400 (s)
		☒ Clear DHCP lease for inactive clients periodically	
		DNS Server IP Address	
		Primary IP Address	8.8.8.8
		Secondary IP Address	8.8.4.4

- (a) Set up the LAN IP address, it has to be different from the Virtual IP and the LAN IP of secondary router. Again, for any routers with the same Priority ID, their IP addresses will be compared, so we suggest to use a IP with lower number on the Primary one.
- (b) Gateway IP is the same with LAN IP, and the note in parentheses indicates that the gateway IP provided to LAN clients will be replaced by the Virtual IP.

- Configure LAN on the secondary router. Mind that the IP should be different and larger than it on the primary router.

LAN >> General Setup

LAN 1 Ethernet TCP / IP and DHCP Setup	LAN 1 IPv6 Setup
Network Configuration For NAT Usage IP Address: 192.168.1.3 Subnet Mask: 255.255.255.0 RIP Protocol Control: Disable	DHCP Server Configuration ☒ Enable Server ☐ Disable Server ☐ Enable Relay Agent Start IP Address: 192.168.1.10 IP Pool Counts: 200 Gateway IP Address: 192.168.1.3 (Replaced by HA Virtual IP 192.168.1.1) Lease Time: 86400 (s) ☒ Clear DHCP lease for inactive clients periodically DNS Server IP Address Primary IP Address: 8.8.8.8 Secondary IP Address: 8.8.4.4

Info

If you have more than one LAN, you should set all the LAN IP of each LAN on Primary and Secondary routers to different IP addresses to avoid IP conflict. Here is the example, there are several LAN and all of them are under the protection of hardware redundancy:

	Subnet	Primary Router	Secondary Router	Virtual IP
LAN1	192.168.1.0	192.168.1.2	192.168.1.3	192.168.1.1
LAN2	192.168.2.0	192.168.2.2	192.168.2.3	192.168.2.1
LAN3	192.168.3.0	192.168.3.2	192.168.3.3	192.168.3.1
...	...	...	...	...
LANx	192.168.x.0	192.168.x.2	192.168.x.3	192.168.x.1

- We have setup High Availability on both routers, and before we link up both routers, it's time to setup all other functions on the primary router so later we can see the configuration sync taking place. If your primary router is already settled please proceed to the next step. Here we configure the WAN as the representative example.

WAN >> Internet Access

WAN 1	
PPPoE	Static or Dynamic IP
☒ Enable ☐ Disable Keep WAN Connection ☐ Enable PING to keep alive PING to the IP: PING Interval: 0 minute(s) WAN Connection Detection Mode: ARP Detect MTU 1492 (Max: 1500) Path MTU Discovery: Detect	Static or Dynamic IP ☐ Obtain an IP address automatically Router Name: Vigor Domain Name: ☐ DHCP Client Identifier * Username: Password: ☒ Specify an IP address IP Address: 100.100.100.100 Subnet Mask: 255.255.255.0 Gateway IP Address: 100.100.100.1

Then confirm the WAN setup by seeing WAN online.

System Information			
Model Name	Vigor2862ac	System Up Time	100:23:32
Router Name	DrayTek	Current Time	Wed Jan 05 2000 04:23:26
Firmware Version	3.8.8_RC10_STD	Build Date/Time	Feb 6 2018 18:42:30
DSL Version	772801 HW: A	LAN MAC Address	00-1D-AA-5D-C9-E0

IPv4 LAN Information					
	IP Address	DHCP		IP Address	DHCP
LAN1	192.168.1.3/24	v	LAN2	192.168.2.1/24	v
LAN3	192.168.3.1/24	v	LAN4	192.168.4.1/24	v
LAN5	192.168.5.1/24	v	LAN6	192.168.6.1/24	v
LAN7	192.168.7.1/24	v	LAN8	192.168.8.1/24	v
DMZ PORT	192.168.17.1/24	v	IP Routed Subnet	192.168.0.1/24	v

- After all the functions are set properly on the primary router, we link up the management interface LAN so both routers can start detecting each other, deciding which one should be the primary and syncing the configuration. Since the routers will communicate via the Management Interface, it's required to use the ports that belong to the Management Interface LAN (LAN1 in this scenario). We can check for this information in LAN >> VLAN. In this scenario we can use the port 5 on both routers, so we use an Ethernet cable to wire up LAN port 5 on both routers.

LAN >> VLAN Configuration

VLAN Configuration												
☒ Enable												
LAN					Wireless LAN				VLAN Tag

☐	☐	☐	☐	☐	☐	☐	☐	☐	LAN 1	☐	0	0

- We may check the High Availability status by visiting the Status page.

Applications >> High Availability

☒ Enable High Availability

Redundancy Method Hot-Standby

General Setup	Config Sync	Status	Set to Factory Default
Group ID	1 (1-255)		
Priority ID	15 (1-30)		
Authentication Key	draytek (Max. 31 characters allowed)		
Management Interface	LAN1		
Update DDNS	☒ Enable		
Syslog	☒ Enable		

For the first time the two routers link up, we can see they are syncing the configuration from the primary to the secondary (showing "Progressing" on the secondary router):

Details HA Setup Renew Refresh							
Status	Router Name	IPv4	State	Stable	WAN	Config Sync Status	Cached Time
	V2925_A	192.168.1.2	Primary	Yes	At Least One Up - Eth	Ready Sync	-
	V2925_B	192.168.1.3	Secondary	Yes	All WANs Down	Progressing	5 min up

Note: The "Cached Time" indicates the time that router has got the information from the other router ago. Click "Renew" to update the information of remote router, click "Refresh" to update the information of local router.

When a sync is finished or the routers are already having the same configuration, it will show the "Equal" result:

Details HA Setup Renew Refresh							
Status	Router Name	IPv4	State	Stable	WAN	Config Sync Status	Cached Time
	V2925_A	192.168.1.2	Primary	Yes	At Least One Up - Eth	Ready Sync	-
	V2925_B	192.168.1.3	Secondary	Yes	All WANs Down	Equal	3 min 6 sec

Note that the router will check if there's any un-synced modification when it reaches the time interval we set in step 2. We may force to sync by clicking the "Sync" button. The secondary router will reboot after the config sync.

9. Now we may inspect if the secondary router received the configuration from the primary router. In this scenario we check the secondary router online status.

System Information			
Model Name	Vigor2925Vn	System Up Time	0:01:13
Router Name	V2925_B	Current Time	2015 Oct 19 Mon 11:40:29
Firmware Version	3.8.2	Build Date/Time	Oct 14 2015 21:25:18
LAN MAC Address	00-1D-AA-BE-92-60		

IPv4 Internet Access				
	Line / Mode	IP Address	MAC Address	Up Time
WAN1	Ethernet / Static IP	Disconnected-HA	00-1D-AA-BE-92-61	00:00:00
WAN2	Ethernet / Static IP	Disconnected-HA	00-1D-AA-BE-92-62	00:00:00
WAN3	USB / ---	Disconnected-HA	00-1D-AA-BE-92-63	00:00:00
WAN4	USB / ---	Disconnected-HA	00-1D-AA-BE-92-64	00:00:00

Before syncing we didn't configure the WAN, now seeing WAN1 and WAN2 having "Static IP" indicates it did receive the corresponding configurations. And the "Disconnected-HA" means this router is not dialing up the WAN due to the primary router in the High Availability group is working, so as a secondary router it doesn't need to be online now. You may also check other configurations on your secondary router.

10. We may also check the Details page.

Sharing the WCF License

11. Now the routers are set, if you have WCF license, you may create a group on MyVigor so these routers can share the same license.
- (a) First, login to myvigor.draytek.com, find High Availability Settings on left hand side and click Add New

- (b) Give a Group Name, select an HA unused Group ID, and select the member routers in the HA Device drop-down menu:

Note that the drop-down menu only lists out the devices that are registered under this MyVigor account. If you don't find the router you are using, please find out which account this device is registered under.

- (c) Save the profile, and we can see the group entry:

High Availability Settings			
Add New			
Delete	Group Name	Router's HA Group ID	Set HA Device
	DrayTek Headquarters	001	

Send the Notification to Network Administrator

We can set Vigor Router to notify the network administrator by sending email or SMS when the following events occur:

1. Failover Occurred: the WAN of the primary router goes down and the secondary router takes over,
2. Configuration Sync Failed: the configuration sync between primary and secondary router fails,
3. Router Unstable: one of the routers becomes unstable.

A-2 How to use DrayDDNS?

Vigor router supports various DDNS service providers, user can set up user-defined profile to update the DDNS even the service provider is not on the list. Now, DrayTek starts to support our own DDNS service - DrayDDNS. We will provide a domain name for each Vigor Router, this single domain name can record IP addresses of all WAN.

Activate DrayDDNS License

1. Go to **Wizards >> Service Activation Wizard**, wait for the router to connect to MyVigor server, then tick **DT-DDNS** and **I have read and accept the above Agreement**, click **Next**.

Service Activation Wizard

Select the service type that you want to activate

Activation Date : 2017-02-23

Web Content Filter(WCF) Service :

☐ BPJM [License Agreement](#)
This is a web content filter that is provided by the German government. It is a free service without any guarantee and will expire one year after activation. You may re-activate the service after expiry.

☐ Cyren 30-Days Free Trial [License Agreement](#)
This is a worldwide web content filter service. The free trail license can only be used once. At the end of the free trail period you may purchase the official one-year Cyren Web Content Filter from an authorized DrayTek reseller.

APP Enforcement(APPE) Service :

☐ DT-APPE [License Agreement](#)
Upgrade APPE Signature automatically.

Dynamic DNS(DDNS) Service :

☒ DT-DDNS [License Agreement](#)
This is a Dynamic Domain Name Service that is provided by DrayTek company. It is a free service will expire 1 year after activation. You may re-active the service after expiry.

Domain Name : .drayddns.com

*** Please note that the DrayDDNS service is currently for internal use only.**

☒ I have read and accept the above Agreement. (Please check this box).

2. Confirm the information, then click **Activate**.

Service Activation Wizard

Please confirm your settings

Service Type : Trial version
Service Activated : Dynamic DNS (.drayddns.com)

Please click **Back** to re-select service type you to activate.

3. MyVigor server will reply with the service activation information.

DrayTek Service Activation

Service Name	Start Date	Expire Date	Status
Web Content filter	---	---	Not Activated
APP Enforcement	---	---	Not Activated
DDNS	2017-02-23	2018-02-23	DT-DDNS

Please check if the license fits with the service provider of your signature. To ensure normal operation for your router, update your signature again is recommended.

Configure DDNS Profile

1. Go to **Applications >> Dynamic DNS Setup**,
 - a. Tick **Enable Dynamic DNS Setup**
 - b. Click an available profile index
 - c. Tick **Enable Dynamic DNS Account**
 - d. Select **DrayTek Global (www.drayddns.com)** as **Service Provider**
 - e. Select the WAN you would like to upload the IP to DDNS server
 - f. Click **Get domain**
 - g. Click **OK** on the pop up notification window

Applications >> Dynamic DNS Setup

Dynamic DNS Setup Set to Factory Default

A-3 How to Implement the LDAP/AD Authentication for User Management?

For simplifying the configuration of LDAP authentication for User Access Management, we implement “Group” feature.

There is no need to pre-configure user profile for each user on Vigor router anymore. We only need to configure the Groups DN, then the Vigor router (e.g., Vigor 2860 series) can pass the authentication to LDAP server with the pre-defined Group path.

Below shows the configuration steps:

1. Access into the web user interface of the Vigor router.
2. Open **Applications>>Active Directory /LDAP** to get the following page for configuring LDAP related settings.

Applications >> Active Directory /LDAP

General Setup | Active Directory / LDAP Profiles | Set to Factory Default

☒ Enable

Bind Type: Regular Mode

Server Address: 172.16.2.8

Destination Port: 389 ☐ Use SSL

Regular DN: uid=vpntest,ou=vpnuser,dc=ms,dc=draytek

Regular Password:

OK Cancel

There are three types of bind type supported:

- **Simple Mode** – Just simply do the bind authentication without any search action.
- **Anonymous** – Perform a search action first with Anonymous account then do the bind authentication.
- **Regular Mode**– Mostly it is the same with anonymous mode. The different is that, the server will firstly check if you have the search authority.
For the regular mode, you'll need to Enter the **Regular DN** and **Regular Password**.

3. Create LDAP server profiles. Click the **Active Directory /LDAP** tab to open the profile web page and click any one of the index number link.

If we have two groups “**RD1**” and “**SHRD**” on LDAP server, we can configure two LDAP server profiles with different Group Distinguished Name.

Applications >> Active Directory /LDAP>>Server Profiles

Index No. 1

Name: rd1

Common Name Identifier: uid

Base Distinguished Name: ou=people,dc=ms,dc=draytek,dc=com

Additional Filter:

Group Distinguished Name: cn=rd1,ou=group,dc=ms,dc=draytek,dc=dk

OK Cancel

Note:

Please type in your additional filter for BaseDN search request. For example, "gidNumber=500" for OpenLDAP, and "msNPallowDialin=TRUE" for AD.

OK Cancel

and

Index No. 2

Name	shrd
Common Name Identifier	uid
Base Distinguished Name	ou=people,dc=ms,dc=draytek,dc=com 
Additional Filter	
Group Distinguished Name	cn=shrd,ou=group,dc=ms,dc=draytek,dc=mk 

Note:

Please type in your additional filter for BaseDN search request. For example, "gidNumber=500" for OpenLDAP, and "msNPAllowDialin=TRUE" for AD.

OK

Cancel

- Click **OK** to save the settings above.
- Open **User Management>>General Setup**. Select **User-Based** as the **Mode** option.

User Management >> General Setup

General Setup

Mode Selection:

☐ **Rule-Based** is a management method based on IP address. Administrator may set different firewall rules to different IP address.

☒ **User-Based** is a management method based on user profiles. Administrator may set different firewall rules to different user profiles.

Notice for User-Based mode:

- In User-Based mode, **Active Rules** in Firewall will be applied to all LAN clients, packets that matches the Active Rules will be blocked or pass immediately, no user authentication is required.
- Only **Inactive Rules** in Firewall can be set for individual user profile. In User-Based mode, packets that do not match Active Rules will need authentication, and the Inactive Rule applied to the specific user profile will then take effect.

Authentication page:

Web Authentication: ☒ HTTPS ☐ HTTP

Login Page 

Logo:

6. Then open **VPN and Remote Access>>PPP General Setup** to **check** the profile(s) that will be authenticated with LDAP server.

VPN and Remote Access >> PPP General Setup

PPP General Setup

PPP/MP Protocol Dial-In PPP Authentication: PAP/CHAP/MS-CHAP/MS-CHAPv2 Dial-In PPP Encryption(MPPE): Optional MPPE Mutual Authentication (PAP): ☐ Yes ☒ No Username: Max: 23 characters Password: Max: 19 characters IP Address Assignment for Dial-In Users when DHCP is disabled. <table border="1"><thead><tr><th></th><th>Start IP Address</th><th>IP Pool Counts</th></tr></thead><tbody><tr><td>LAN 1</td><td>192.168.1.200</td><td>50</td></tr></tbody></table>		Start IP Address	IP Pool Counts	LAN 1	192.168.1.200	50	PPP Authentication Methods ☒ Remote Dial-in User ☒ RADIUS ☒ AD/LDAP ☒ PPTP LDAP Profile ☒ TACACS+ Note: - Please select 'PAP Only 'Dial-In PPP Authentication',if you want to use AD/LDAP or TACACS+ for PPP Authentication. - Default priority is Remote Dial-in User -> RADIUS -> AD/LDAP -> TACACS+. - Vigor router also supports Frame-IP-Address from RADIUS server to assign IP address to VPN client. While using RADIUS or LDAP Authentication: Assign IP from subnet: LAN1
	Start IP Address	IP Pool Counts					
LAN 1	192.168.1.200	50					

OK

After above configurations, users belong to either “rd1” or “shrd” group can access Internet after inputting their credentials on LDAP server.

A-4 How to Configure Customized DDNS?

This article describes how to configure customized DDNS on Vigor routers to update your IP to the DDNS server. We will take "Changeip.org" and "3322.net" as example. Before setting, please make sure that the WAN connection is up.

Part A : Changeip.org

Online Status					
Physical Connection			System Uptime: 0day 2:25:59		
IPv4		IPv6			
LAN Status		Primary DNS: 168.95.192.1		Secondary DNS: 168.95.1.1	
IP Address		TX Packets	RX Packets		
10.1.7.1		2069	1036		
WAN 1 Status					>> Drop PPPoE
Enable	Line	Name	Mode	Up Time	
Yes	Ethernet	iwiz	PPPoE	2:25:53	
IP	GW IP	TX Packets	TX Rate(Bps)	RX Packets	RX Rate(Bps)
1.169.185.242	168.95.98.254	14851	9506	11281	912

Note that,

Username: jo***

Password: jo*****

Host name: j****.changeip.org

WAN IP address: 1.169.185.242

Following is the screenshot of editing the HTML script on the browser to update your IP to the DDNS server.

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

☒ Enable Dynamic DNS Account

WAN Interface: WAN1 First

Service Provider: User-Defined

Provider Host: changeip.org

Service API:
`/dynamic/dns/update.asp?
u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP###&c
md=update&offline=0`

Auth Type: basic

Connection Type: Http

Server Response:

Login Name: chronic6653 (max. 64 characters)

Password: ***** (max. 23 characters)

☐ Wildcards

☐ Backup MX

Mail Extender:

Determine Real WAN IP: Internet IP

OK Clear Cancel

2. Set the Service Provider as **User-Defined**.
3. Set the Service API as:
`/dynamic/dns/update.asp?u=jo***&p=jo*****&hostname=j****.changeip.org&ip=###IP###&cmd=update&offline=0`

In which, ###IP### is a value which will be replaced with the current interface IP address automatically when DDNS service is running. In this case the IP will be 1.169.185.242.

4. After setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server.

Part B : 3322.net

WAN 1	
Link Status	: Connected
MAC Address	: 00-50-7F-C8-C6-A1
Connection	: PPPoE
IP Address	: 111.243.178.53
Default Gateway	: 168.95.98.254
Primary DNS	: 168.95.192.1
Secondary DNS	: 168.95.1.1

Username: bi*****

Password: 88*****

Host name: bi*****.3322.org

WAN IP address: 111.243.178.53

To update the IP to the DDNS server via editing the HTML script, we can Enter the following script on the browser:

And the result will be :

“good 111.243.178.53” means our IP has been updated to the server successfully.

Now we have to configure the router so it can do the same job for us automatically.

1. Please go to **Applications >> Dynamic DNS** to create a profile for Customized DDNS client.

Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup

Index : 1

☒ Enable Dynamic DNS Account

WAN Interface:

Service Provider:

Provider Host:

Service API:

Auth Type:

Connection Type:

Server Response:

Login Name: (max. 64 characters)

Password: (max. 23 characters)

☐ Wildcards

☐ Backup MX

Mail Extender:

Determine Real WAN IP:

OK Clear Cancel

2. Set the Service Provider as **User-Defined**.
3. Set the Provider Host as **member.3322.net**.
4. Set the Service API as:
/dyndns/update?hostname=yourhost.3322.org&myip=####IP####&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO
5. Enter your account and password.
6. After the setting, the Customized DDNS service will be up, and our IP will be updated to the DDNS server automatically.

Part C : Extend Note

The customized Service Provider is also eligible with the CloudDNS.net.

The screenshot shows a web browser window with the URL `ipv4.cloudns.net/api/dynamicURL/?q=MTUzMTE3OjE0NTA1MzA6MDAyODE3MDIiZGQ3ZjNiZmE2M...`. Below the browser, there is a configuration window titled "Applications >> Dynamic DNS Setup >> Dynamic DNS Account Setup". The window contains the following fields:

- Index : 1**
- ☒ **Enable Dynamic DNS Account**
- WAN Interface**: WAN1 First
- Service Provider**: Customized
- Provider Host**: members.3322.net
- Service API**: `/dyndns/update?hostname=b...3322.org&myip=##IP##&wildcard=OFF&mx=mail.exchanger.ext&backmx=NO&offline=NO`
- Auth Type**: basic
- Connection Type**: Http
- Server Response**: OK (highlighted with a red box)
- Login Name**: chronic6653 (max. 64 characters)
- Password**: (max. 23 characters)
- ☐ Wildcards
- ☐ Backup MX
- Mail Extender**:
- Determine Real WAN IP**: Internet IP

At the bottom of the window are three buttons: OK, Clear, and Cancel. A red arrow points from the "Server Response" field to the "OK" button in the browser window above.

II-5 Routing

Route Policy (also well known as PBR, policy-based routing) is a feature where you may need to get a strategy for routing. The packets will be directed to the specified interface if they match one of the policies. You can setup route policies in various reasons such as load balance, security, routing decision, and etc.

Through protocol, IP address, port number and interface configuration, Route Policy can be used to configure any routing rules to fit actual request. In general, Route Policy can easily reach the following purposes:

Load Balance

You may manually create policies to balance the traffic across network interface.

Specify Interface

Through dedicated interface (WAN/LAN/VPN), the data can be sent from the source IP to the destination IP.

Address Mapping

Allows you specify the outgoing WAN IP address (es) for an internal private IP address or a range of internal private IP addresses.

Priority

The router will determine which policy will be adopted for transmitting the packet according to the priority of Static Route and Route Policy.

Failover to/Failback

Packets will be sent through another Interface or follow another Policy when the original interface goes down (**Failover to**). Once the original interface resumes service (**Failback**), the packets will be returned to it immediately.

Other routing

Specify routing policy to determine the direction of the data transmission.

Info

For more detailed information about using policy route, refer to Support >>FAQ/Application Note on www.draytek.com.

Web User Interface

II-5-1 Static Route

Go to **Routing >> Static Route**. You can create static routes so that traffic to specific IP addresses go through a particular LAN or WAN.

The Static Route Setup screen has separate tabs for IPv4 and IPv6. Select the appropriate tab to begin.

Static Route for IPv4

Routing >> Static Route Setup

Available settings are explained as follows:

Item	Description
Set to Factory Default	Clear all of the settings and return to factory default settings.
Viewing Routing Table	Displays the routing table for your reference. Diagnostics >> View Routing Table  The screenshot displays two routing tables. The IPv4 Routing Table has columns: Key, Destination, Gateway, and Interface. It shows one entry with Key 'C~', Destination '192.168.1.0/ 255.255.255.0', Gateway 'directly connected', and Interface 'LAN1'. Below the table is a key: C: Connected, S: Static, R: RIP, *: default, ~: private, B: BGP. The IPv6 Routing Table has columns: Destination, Interface, Flags, Metric, and Next Hop. It shows one entry with Destination 'FE80::/64', Interface 'LAN1', Flags 'U', Metric '256', and Next Hop '::'. A 'Show Detail' checkbox and a 'Refresh' button are also visible.
Index	The number (1 to 40) under Index allows you to open next page to set up static route.
Enable	Enables or disables the static route.
Destination Address	Beginning destination address.

Add Static Routes to Private and Public Networks

Here is an example (based on IPv4) of setting Static Route in Main Router so that user A and B locating in different subnet can talk to each other via the router. Assuming the Internet access has been configured and the router works properly:

- use the Main Router to surf the Internet.
- create a private subnet 192.168.10.0 using an internal Router A (192.168.1.2)
- create a public subnet 211.100.88.0 via an internal Router B (192.168.1.3).
- have set Main Router 192.168.1.1 as the default gateway for the Router A 192.168.1.2.

Before setting Static Route, user A cannot talk to user B for Router A can only forward recognized packets to its default gateway Main Router.

1. Go to **LAN** page and click **General Setup**, select 1st Subnet as the **RIP Protocol Control**. Then click the **OK** button.

Info

There are two reasons that we have to apply RIP Protocol Control on 1st Subnet. The first is that the LAN interface can exchange RIP packets with the neighboring routers via the 1st subnet (192.168.1.0/24). The second is that those hosts on the internal private subnets (ex. 192.168.10.0/24) can access the Internet via the router, and continuously exchange of IP routing information with different subnets.

- Click the **LAN >> Static Route** and click on the **Index Number 1**. Check the **Enable** box. Please add a static route as shown below, which regulates all packets destined to 192.168.10.0 will be forwarded to 192.168.1.2. Click **OK**.

Routing >> Static Route Setup

Index No. 1

☒ Enable	
Destination IP Address	192.168.10.0
Subnet Mask	255.255.255.255 / 32 ▼
Gateway IP Address	192.168.1.2
Network Interface	LAN1 ▼

Note:

WAN7, WAN8, WAN9 are PVCs or VLANs that can be configured on the [Multi-PVC/VLAN](#) page.

Available settings are explained as follows:

Item	Description
Enable	Enables or disables the static route.
Destination IP Address	Beginning destination address. Enter an IP address as the destination of the static route.
Subnet Mask	Subnet mask of the destination address. Enter the subnet mask for the static route.
Gateway IP Address	Enter the IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	Use the drop down list to specify an interface for such static route. The LAN or WAN that should be used to contact the gateway.

- Return to **Static Route Setup** page. Click on another **Index Number** to add another static route as show below, which regulates all packets destined to 211.100.88.0 will be forwarded to 192.168.1.3. Click **OK**.

Routing >> Static Route Setup

Index No. 2

☒ Enable	
Destination IP Address	211.100.88.0

Available settings are explained as follows:

Item	Description
Enable	Enables or disables the static route.
Destination IPv6 Address / Prefix Len	Beginning destination address and the number of bits in the subnet mask of the destination IPv6 address. Enter the IP address with the prefix length for this entry.
Gateway IPv6 Address	IP address of the gateway, which is the host that the traffic needs to go through to reach the destination.
Network Interface	The LAN or WAN that should be used to contact the gateway.

When you finish the configuration, please click **OK** to save and exit this page.

II-5-2 Load-Balance /Route Policy

The Load-Balance/Route Policy feature gives you control over how different types of outbound traffic are routed, through any of the LANs, WANs or VPNs. The policy set in Load-Balance/Route Policy always has higher priority than **Default Route** and **Auto Load Balance** set in **WAN >> Internet Access**, and always has lower priority than the **Firewall Rules**. Administrator may also define a priority to this policy.

To add, delete or modify load balance or route policies, select **Routing >> Load-Balance / Route Policy** from the menu bar.

Routing >> Load-Balance/Route Policy

☐ Wizard Mode: most frequently used settings in three pages

☒ Advance Mode: all settings in one page

OK

Available settings are explained as follows:

Item	Description
Rules per page	The number of rules to display on a single page.
Set to Factory Default	Clear the settings of all Load-Balance and Route Policy rules.
Index	Rule index. Click to bring up the configuration page of the rule.
Enable	Select to enable this rule.
Protocol	Protocol(s) to which this rule applies.
Interface	LAN, IP Routed Subnet, WAN or VPN interface that the traffic described by this rule is to be directed.
Priority	The priority of this rule.
Src IP Start	The beginning source IP address.
Src IP End	The ending source IP address.
Dest IP Start	The beginning destination IP address.
Dest IP End	The ending destination IP address.
Dest Port Start	The beginning destination port number.

Dest Port End	The ending destination port number.
Move UP/Move Down	Click to shift priority of rule up/down by one.
Wizard Mode	The setup wizard will present the most-commonly used rule settings in three steps.
Advance Mode	All the rule settings will be shown on one configuration page.

If Wizard Mode is selected, you will be guided through the configuration process in three steps. Only the most commonly used settings will be shown.

1. Click the **Wizard Mode** radio button.
2. Click **Index 1**. The setting page will appear as follows:

Routing >> Load-Balance/Route Policy

Index: 1 Criteria

Load-Balance/Route Policy applies to packets that meet the following criteria

Source IP

☒ Any

☐ Src IP Start Src IP End

~

Destination IP

☒ Any

☐ Dest IP Start Dest IP End

~

☐ Country Object

Available settings are explained as follows:

Item	Description
Source IP	Source IP addresses to which this rule is to be applied. Any - This rule applies to all source IP addresses. Src IP Start, Src IP End - This rule applies to the specified range of source IP addresses. If there is only one source IP address, enter the address in both the Start and End fields.
Destination IP	Destination IP addresses to which this rule is to be applied. Any - This rule applies to all destination IP addresses. Dest IP Start, Dest IP End - This rule applies to the specified range of destination IP addresses. If there is only one destination IP address, enter the address in both the Start and End fields. Country Object - Specify a country object. All the IPs coming from the country (countries) specified in the object will be passed through the WAN interface.

- Click **Next** to get the following page.

Priority

Note:

Force NAT(Routing): NAT(Routing) will be performed on outgoing packets, regardless of which type of subnet (NAT or IP Routing) they originate from.

Available settings are explained as follows:

Item	Description
Enable	Select to enable rule and unlock all fields for configuration.
Comment	Type a brief explanation for such profile.
Criteria	Router examines outgoing LAN traffic to find the first rule whose criteria are satisfied. Protocol - Use the drop-down menu to choose a proper protocol for the WAN interface. Source - Source IP addresses to which this rule is to be applied. ● Any - This rule applies to all source IP addresses. ● IP Range - This rule applies to the specified range of source IP addresses. - Start - Enter an address as the starting IP for such profile.

	- End - Enter an address as the ending IP for such profile. ● IP Subnet - This rule applies to source IP addresses defined by the specified network IP address and subnet mask. - Network - Enter an IP address here. - Mask - Use the drop down list to choose a suitable mask for the network. ● IP Object / IP Group - Use the drop down list to choose a preconfigured IP object/group. Destination - Destination IP addresses to which this rule is to be applied. ● Any - This rule applies to all source IP addresses. ● IP Range - This rule applies to the specified range of destination IP addresses. - Start - Enter an address as the starting IP for such profile. - End - Enter an address as the ending IP for such profile. ● IP Subnet - This rule applies to destination IP addresses defined by the specified network IP address and subnet mask. - Network - Enter an IP address here. - Mask - Use the drop down list to choose a suitable mask for the network. ● Domain Name - Specify a domain name as the destination. - Select - Click it to choose an existing domain name defined in Objects Setting>>String Object. - Delete - Remove current used domain name. - Add - Create a new domain name as the destination. ● IP Object / IP Group - Use the drop down list to choose a preconfigured IP object/group. ● Country Object - Use the drop down list to choose a preconfigured object. Then all IPs within that country will be treated as the destination IP. Destination Port - Destination port numbers to which this rule is to be applied. As only TCP and UDP protocols use port numbers, this setting does not apply to the ICMP protocol. ● Any - This rule applies to all destination ports. ● Dest Port Range - This rule applies to the specified range of destination ports. - Start - Enter the destination port start for the destination IP. - End - Enter the destination port end for the destination IP. If this field is blank, it means that all the destination ports will be passed through the WAN interface.
Send to if criteria matched	If criteria are matched, the traffic will be sent to the designated interface and gateway. Interface - Packets match with the above criteria will be transferred to the interface chosen here. Select an

	interface from the list (WAN/LAN: A WAN or LAN interface; VPN: A Virtual Private Network). Gateway IP – Select a gateway. ● Default Gateway - Traffic will be sent to the default gateway address of the specified interface. ● Specific Gateway - Traffic will be sent to the specified gateway address instead of the default gateway address. Packet Forwarding to WAN/LAN via – When you choose LAN/WAN (e.g., WAN1) as the Interface for packet transmission, you have to specify the way the packet forwarded to. ● Force NAT - The source IP address will not be used to connect to the remote destination. Network Address Translation (NAT) will be used, where a common IP address will be used. ● Force Routing - The source IP address will be preserved when connecting to the remote destination. Failover to – If the interface specified above loses connection, traffic can be forwarded to an alternate interface or be scrutinized by an alternate route policy. ● WAN/LAN - Use the drop down list to choose an interface as an auto failover interface. ● VPN - Use the drop down list to choose a VPN tunnel as a failover tunnel. ● Route Policy - Use the drop down list to choose an existed route policy profile. ● Gateway IP - The failed-over traffic can be sent to the Default Gateway of the alternate interface/route policy, or a Specific Gateway at the specified IP address. Failback- When Failover to option is enabled, Administrator could also enable Failback to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packets via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator wants the traffic to go via the primary interface as soon as possible.
Priority	Specifies the priority of the rule in relation to other rules. Lowering the priority value increases the priority of the rule, and vice versa. Routes in the routing table have a priority value of 150, whereas the default routes have a priority value of 250. The default priority value of Load Balance/Route Policy rules is 200. To change the priority, move the slider or enter a value.

3. When you finish the configuration, please click **OK** to save and exit this page.

Diagnose for Route Policy

The Diagnose function allows you to determine how a specific type of traffic from a host to a destination will be routed, and which routes, route policies and load balance rules match the criteria of the traffic.

II-5-3 OSPF

OSPF(Open Shortest Path First), running within the AS, is a routing protocol based on IP protocol. It uses the algorithm of SPF (Shortest Path First) to calculate the route metric. It is suitable for large network and complicated data exchange. Vigor router supports up to OSPF version 2(only for IPv4).

The Autonomous System (AS) used in OSPF can be divided into several **areas**. Usually, Area 0 will be used as OSPF backbone which distributing the routing information among areas.

When you need faster convergence than distance vector, want to support much larger networks or want to have less susceptible to bad routing information, you can enable OSPF feature to fit your request. Note that both routers must support OSPF function at the same time to build the OSPF connection.

Open **Routing >> OSPF** to get the following page.

Routing >> OSPF

Basic Settings								View Routing Table
Local								
☐ Enable OSPF								
Profile								
Enable	Index	Interface	Area	MD5 Auth	Password	Key ID (1 - 255)	Neighborhoods	
☐	1	LAN 1	0	Disable		0	0	
☐	2	LAN 1	0	Disable		0	0	
☐	3	LAN 1	0	Disable		0	0	
☐	4	LAN 1	0	Disable		0	0	
☐	5	LAN 1	0	Disable		0	0

Available settings are explained as follows:

Item	Description
Select	Check the box to enable the configuration for the selected index entry.
IP Address	Enter the IP address for a router.
Subnet Mask	Use the drop down list to specify a subnet mask for the IP address.

Application Notes

A-1 How to set up Address Mapping with Route Policy?

Address Mapping is used to map a specified private IP or a range of private IPs of NAT subnet into a specified WAN IP (or WAN IP alias IP). Refer to the following figure.

This document introduces how to set up address mapping with Route Policy. When a WAN interface has multiple public IP addresses, Administrator may specify the outgoing IP for certain internal IP address by a Route Policy.

1. Set up WAN IP Alias. Go to **WAN >> Internet Access >> Details** Page, and click on **WAN IP Alias** button.

Index	Enable	Aux. WAN IP
1.	☒	---
2.	☒	172.17.1.1
3.	☒	172.17.2.2
4.	☐	0.0.0.0
5.	☐	0.0.0.0
6.	☐	0.0.0.0
7.	☐	0.0.0.0
8.	☐	0.0.0.0

<< 1-8 | 9-16 | 17-24 | 25-32 >> Next >>

OK Clear All Close

- Check **Enable**.
- Enter the WAN IP address.
- Click **OK** to save.

After setting up the WAN IP Alias, the IP addresses will be shown in the drop-down list of Interface in Route Policy setting.

- Go to **Routing>> Load Balance/Route Policy**. Create a Route Policy for specific IP address to send from specific WAN IP Address.

Routing >> Load-Balance/Route Policy

Packet Forwarding to WAN/LAN via ☒ Force NAT

☐ Force Routing

☐ Failover to

☒ WAN/LAN

☐ VPN

☐ Route Policy

Gateway ☒ Default Gateway

☐ Specific Gateway

- Enable this policy.
 - Enter **Source IP** as the range of private IP address.
 - Leave the Destination IP and Port as **Any**.
 - Select **Interface** as WAN, and then select Interface address from the drop-down list. (The List can be edited in **WAN IP Alias** setting.)
 - Enable **Failover to** other WAN so the traffic will be sent via other Interface when the path fails. But do not enable this option if you want the traffic only to use a designated IP address.
 - Click **OK** to save.
- After the above configuration, packet source from the range between 192.168.1.20 and 192.168.1.30 sent to the Internet will use the public IP 172.17.1.1.

A-2 How to use destination domain name in a route policy?

Route Policy supports using a domain name as destination criteria. It provides a more direct way to set up route policies if the network administrator is trying to specify the gateway for the traffic that destined for a certain website.

To use a destination domain name as criteria, just select **Domain Name** as **Destination** in Criteria, and enter the domain name in the empty field.

Or you may click **Select**, and use a string that is pre-defined in Objects Settings >> String Object as the domain name.

Click **Add** too add more domain names, we can set up to 5 domain names in one route policy.

Auto-create String Objects

If you manually enter the domain name in a route policy, after clicking **OK** to apply the route policy, those domain names will be given a number.

The screenshot shows the 'Route Policy' configuration window. The 'Destination' field is set to 'Domain Name'. Below it, a list of string objects is displayed with their indices and names. Each entry has 'Select' and 'Delete' buttons. The list includes: 1 - Floor_1, 3 - server1.draytek.com, 4 - Draytek Hotspot, and 2 - Floor_2. There is also an 'Add(up to 5)' button. The 'Source' field is set to 'IP Range' with 'Start: 192.168.1.1' and 'End: 192.168.1.1'. The 'Destination Port' is set to 'Any'.

Index	String	Select	Delete
1	Floor_1	Select	Delete
3	server1.draytek.com	Select	Delete
4	Draytek Hotspot	Select	Delete
2	Floor_2	Select	Delete

That means the router has automatically created string objects for those domain names, so that they can be used in other route policies or other functions.

Objects Setting >> String Object

The screenshot shows the 'String Object' management page. At the top, there is a dropdown for '10 strings per page' and a link 'Set to Factory Default'. Below is a table with columns 'Index' and 'String'. The table lists six string objects: Floor_1, Floor_2, server1.draytek.com, Draytek Hotspot, Floor_3, and portal.draytek.com. Each row has a checkbox in the rightmost column. There is a 'Clear' button at the top right and an 'Add' button at the bottom center.

Index	String	
1	Floor_1	☐
2	Floor_2	☐
3	server1.draytek.com	☐
4	Draytek Hotspot	☐
5	Floor_3	☐
6	portal.draytek.com	☐

Objects Backup/Restore

A-3 Introduction to Load Balance/Route Policy

This document introduces the Load-Balance/Route Policy. This feature allows network administrator to manage the outbound traffic more specifically.

The Policy set in Load-Balance/Route Policy always has higher priority than Default Route and Auto Load Balance set in **WAN >> General Setup**, and always has lower priority than the Firewall Rules. Administrator may also define a priority to this policy.

To configure Route Policy, go to **Routing>>Load-Balance/Route Policy**. The following image is a screen-shot of Load-Balance/Route policy page. It lists all the policies and shows whether the policy is enabled, what are the criteria to match, and through which the interface should the traffic to go if the criteria are matched, and also its priority.

Routing >> Load-Balance/Route Policy ?

Load-Balance/Route Policy 10 rules per page | [Set to Factory Default](#) | [Diagnose](#)

Index	Enable	Comment	Protocol	Interface	Priority	Source	Destination	Dest Port	Move Up	Move Down

Criteria

Protocol

Any

Source

IP Range

Start: 192.168.1.10 End: 192.168.1.100

Destination

IP Range

Start: 8.8.8.8 End: 8.8.8.8

Destination Port

Any

Send via if Criteria Matched

- a. Select a Protocol.
- b. Enter the Source IP address range, the Source IP could be a single address if the Start and End are the same.
- c. Enter the Destination IP address range.
- d. Select the Destination Port.

The above configuration is an example that if a packet is sent from 192.168.1.10~192.168.1.100 to 8.8.8.8, no matter what the protocol or destination port is, it will follow this route policy.

2. Next, we select an interface and gateway through which should the packet be sent if it matches the criteria.

- a. Select an Interface.
- b. Select a Gateway IP. Note that if Interface is chosen to be a LAN, it is necessary to designate a specific gateway.

The above configuration is an example that if a packet matches the criteria of this Route Policy, it will be sent to the default gateway then the destination through VPN1.

3. In **Advance Mode**, if the Interface is selected as WAN or VPN, there are some more options:

- **Failover to:** Enables packet to be sent through other Interface or follow another Policy when detects a path failure in the original interface. The above configuration indicates that the packets will be sent through WAN2 when the original route is disconnected.
- **Failback:** When "Failover to" option is enabled, Administrator could also enable "Failback" to clear the existing session on Failover interface and return to the original interface immediately once the original interface resume its service. When Failback is not enabled, the router will only stop sending packet via the Failover interface when the existing sessions are cleared, and this might take a long time because some application will keep sending packet once a while. Therefore, Failback option is recommended if Administrator want the traffic go via the primary interface as soon as possible.
- **Priority:** Administrator may set priority between 1 and 249 for this Route policy, where smaller number indicates higher priority. When two policies are having the same priority, the first (according to the policy index order) matched policy will be implemented.

This page is left blank.

Part III VPN

VPN

SSL VPN

Certificate
Management

A Virtual Private Network (VPN) is the extension of a private network that encompasses links across shared or public networks like the Internet. In short, by VPN technology, you can send data between two computers across a shared or public network in a manner that emulates the properties of a point-to-point private link.

It is a form of VPN that can be used with a standard Web browser.

A digital certificate works as an electronic ID, which is issued by a certification authority (CA). It contains information such as your name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Here Vigor router support digital certificates conforming to standard X.509.

III-1 VPN and Remote Access

A Virtual Private Network (VPN) is an extension of a private network that allows users to access network resources that available on the private network across shared or public networks such as the Internet, as if users are directly connected to the private network.

Here are some uses of VPNs:

- Communication between home office and customer.
- Secure connection between Teleworker, staff on business trip and main office.
- Exchange data between remote office and main office.
- POS between chain store and headquarters.
- Circumvention of Internet censorship that filters websites or contents.
- Circumvention of geolocation techniques employed by service providers or vendors to block or restrict services to users.
- Secure communications over public access points

Web User Interface

III-1-1 Remote Access Control

The Vigor router supports several protocols for VPNs, all of which can be enabled or disabled independently of one another.

If you intend to run a VPN server inside your LAN, you should disable the VPN service of Vigor Router to allow VPN tunnel pass through, as well as the appropriate NAT settings, such as DMZ or open port. Open **VPN and Remote Access>>Remote Access Control**.

VPN and Remote Access >> Remote Access Control Setup

Remote Access Control Setup

☒ Enable PPTP VPN Service
☒ Enable IPSec VPN Service
☒ Enable L2TP VPN Service
☒ Enable SSL VPN Service
☒ Enable OpenVPN Service

Note:

To allow VPN pass-through to a separate VPN server on the LAN, disable any services above that use the same protocol and ensure that NAT [Open Ports](#) or [Port Redirection](#) is also configured.

OK

Clear

Cancel

Item	Description
Enable PPTP VPN Service	This is the one of the earliest VPN protocols and is natively supported by all Microsoft Windows versions since Windows 95, all Android devices, iOS devices before version 10, and Mac OS X before version 10.12. It is easy to set up, has low overhead, and moderately secure.
Enable IPSec VPN Service	This is a network protocol that encrypts traffic between two network locations. Windows, by means of Windows Firewall, natively supports IPsec tunnels between endpoints with static IP addresses. For computers with dynamically-assigned IP addresses, DrayTek provides the SmartVPN client .
Enable L2TP VPN Service	This is a tunneling protocol used in VPNs. It does not encrypt network traffic unless used in conjunction with IPsec.
Enable SSL VPN Service	This type of VPN uses Secure Sockets Layer (SSL) and Transport Layer Security (TLS), which are also used to encrypt traffic to and from websites. Since SSL and TLS work on top of TCP and UDP, which are the most common internet protocols, they are less likely to be have issues with firewalls and gateways.
Enable OpenVPN Service	This type of VPN offers a convenient way for users to build VPN between local end and remote end.

To save changes on the page, select **OK**; to discard changes, select **Cancel**; to clear settings on this page and revert to default settings, select **Clear**.

III-1-2 PPP General Setup

This page allows configuration of Point-to-Point Protocol (PPP) used by PPTP and L2TP VPN connections. From the Main Menu select **VPN and Remote Access >> PPP General Setup** to bring up the following configuration page.

VPN and Remote Access >> PPP General Setup

PPP General Setup

PPP/MP Protocol Dial-In PPP Authentication: PAP/CHAP/MS-CHAP/MS-CHAPv2 Dial-In PPP Encryption(MPPE): Optional MPPE Mutual Authentication (PAP): ☐ Yes ☒ No Username: Max: 23 characters Password: Max: 19 characters IP Address Assignment for Dial-In Users when DHCP is disabled. <table><thead><tr><th></th><th>Start IP Address</th><th>IP Pool Counts</th></tr></thead><tbody><tr><td>LAN 1</td><td> 192.168.1.200 </td><td> 50 </td></tr></tbody></table>		Start IP Address	IP Pool Counts	LAN 1	192.168.1.200	50	PPP Authentication Methods ☒ Remote Dial-in User ☒ RADIUS ☒ AD/LDAP PPTP LDAP Profile ☒ TACACS+ Note: 1. Please select 'PAP Only' Dial-In PPP Authentication, if you want to use AD/LDAP or TACACS+ for PPP Authentication. 2. Default priority is Remote Dial-in User -> RADIUS -> AD/LDAP -> TACACS+. 3. Vigor router also supports Frame-IP-Address from RADIUS server to assign IP address to VPN client. While using RADIUS or LDAP Authentication: Assign IP from subnet: LAN1
	Start IP Address	IP Pool Counts					
LAN 1	192.168.1.200	50					

OK

Available settings are explained as follows:

Item	Description
Dial-In PPP Authentication	PAP Only - Authenticate dial-in users using the PAP protocol only. PAP/CHAP/MS-CHAP/MS-CHAPv2 - Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP.
Dial-In PPP Encryption (MPPE)	Specifies if PPP encryption (MPPE) is to be used for dial-in VPN connections. Optional MPPE - MPPE is optional. If the VPN client supports MPPE, PPP data will be encrypted. Require MPPE (40/128bits) - Require PPP encryption for dial-in VPN connections. Both 40- and 128-bit encryption schemes are allowed. The remote dial-in user will use 40-bit to perform encryption prior to using 128-bit for encryption. In other words, if 128-bit MPPE encryption method is not available, then 40-bit encryption scheme will be applied to encrypt the data. Maximum MPPE - Require 128-bit PPP encryption for all dial-in VPN connections.
Mutual Authentication (PAP)	Specifies if mutual authentication is to be used. Some VPN peers (e.g., certain Cisco routers) require bi-directional authentication used for providing stronger security. When mutual authentication is enabled, Username and Password fields should also be populated using values from

	the VPN peer. The maximum lengths of these fields are 23 and 19 characters, respectively. Yes – Enable mutual authentication. No – Disable mutual authentication.
IP Address Assignment for Dial-In Users when DHCP is disabled	LAN1 - When the router's DHCP server is disabled, the router will assign IP addresses to dial-in VPN users starting with the IP address specified in Start IP Address. The total number of dial-in VPN IP addresses to be given out is specified in IP Pool Counts. LAN# will be available if it is enabled. Refer to LAN>>General Setup for enabling the LAN interface.
PPP Authentication Methods	The credentials to be used for PPP authentication will be obtained from the selected sources, in the following order: Remote Dial-in User – The usernames and passwords in VPN and Remote Access >> Remote Dial-in User section will be used. RADIUS – An external RADIUS server is to be used for authentication. Please be sure to set up the RADIUS server in Applications >> RADIUS/TACACS+ section. AD/LDAP – An Active Directory/LDAP server is to be used for authentication. Please be sure to configure AD and LDAP settings in Applications >> Active Directory/LDAP. TACACS+ – A TACACS+ server is to be used for authentication. Please be sure to set up the RADIUS server in Applications >> RADIUS/TACACS+ section.
PPTP LDAP Profile	Configured LDAP profiles will be listed under such item. Simply check the one you want to enable the PPP authentication by LDAP server profiles. However, if there is no profile listed, simply click the link of PPTP LDAP Profile to create/add some new LDAP profiles you want.
While using Radius or LDAP Authentication	When the dial-in VPN user is authenticated using credentials from the Remote Dial-in User section, an IP address from the LAN specified in the user profile will be assigned. When the user is authenticated using credentials from other sources (RADIUS, AD, TACACS+), the assigned IP address will be drawn from the address pool of the LAN specified here.

To save changes on the page, select **OK**.

III-1-3 IPsec General Setup

In **IPsec General Setup**, there are two major parts of configuration.

There are two phases of IPsec.

- Phase 1: negotiation of IKE parameters including encryption, hash, Diffie-Hellman parameter values, and lifetime to protect the following IKE exchange, authentication of both peers using either a Pre-Shared Key or Digital Signature (x.509). The peer that starts the negotiation proposes all its policies to the remote peer and then remote peer tries to find a highest-priority match with its policies. Eventually to set up a secure tunnel for IKE Phase 2.
- Phase 2: negotiation IPsec security methods including Authentication Header (AH) or Encapsulating Security Payload (ESP) for the following IKE exchange and mutual examination of the secure tunnel establishment.

There are two encapsulation methods used in IPsec, **Transport** and **Tunnel**. The **Transport** mode will add the AH/ESP payload and use original IP header to encapsulate the data payload only. It can just apply to local packet, e.g., L2TP over IPsec. The **Tunnel** mode will not only add the AH/ESP payload but also use a new IP header (Tunneled IP header) to encapsulate the whole original IP packet.

AH (Authentication Header) provides data authentication and integrity for IP packets passed between VPN peers. This is achieved by a keyed one-way hash function to the packet to create a message digest. This digest will be put in the AH and transmitted along with packets. On the receiving side, the peer will perform the same one-way hash on the packet and compare the value with the one in the AH it receives.

ESP (Encapsulating Security Payload) is a security protocol that provides data confidentiality and protection with optional authentication and replay detection service.

VPN and Remote Access >> IPsec General Setup

VPN IKE/IPsec General Setup

(Dial-in settings for Remote Dial-In users and LAN-to-LAN VPN Client with Dynamic IP.)

IKE Authentication Method	
Certificate	None
Preferred Local ID	Alternative Subject Name
General Pre-Shared Key	Max: 64 characters
Confirm General Pre-Shared Key	
XAuth User Pre-Shared Key	Max: 64 characters
Confirm XAuth User Pre-Shared Key	
IPsec Security Method	
☒ Basic ☐ Medium ☐ High	Encryption: AES/3DES/DES HMAC: SHA256/SHA1 DH Group: G21/G20/G19/G14/G5/G2/G1 AH: ☒ Enable

Available settings are explained as follows:

Item	Description
IKE Authentication Method	This usually applies to those are remote dial-in user or node (LAN-to-LAN) which uses dynamic IP address and IPsec-related VPN connections such as L2TP over IPsec and IPsec tunnel. There are two methods offered by Vigor router for you to authenticate the incoming data coming from remote dial-in user, Certificate (X.509) and Pre-Shared Key. Certificate - X.509 certificates can be used for IKE authentication. To set up certificates on the router, go to the Certificate Management section. Preferred Local ID - Specify the preferred local ID information (Alternative Subject Name First or Subject Name First) for IPsec authentication while the client is using the general setting (without a specific Peer IP or ID in the VPN profile). General Pre-Shared Key- Define the PSK key for general authentication. Confirm General Pre-Shared Key- Re-enter the characters to confirm the pre-shared key. XAuth User Pre-Shared Key - Define the PSK key for IPsec XAuth authentication. Confirm XAuth User Pre-Shared Key- Re-enter the characters to confirm the pre-shared key for IPsec XAuth authentication. Note: Any packets from the remote dial-in user which does not match the rule defined in VPN and Remote Access>>Remote Dial-In User will be applied with the method specified here.
IPsec Security Method	Available methods include Basic, Medium and High. Each method offers different encryption, HMAC and DH Group. Basic - Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is active. Medium - When this option is selected, the Authentication Header (AH) protocol can be used to provide authentication to IPsec traffic. High - When this option is selected, the Encapsulating Security Payload (ESP) protocol can be used to provide authentication and encryption to IPsec traffic. Three encryption standards are supported for ESP: DES, 3DES and AES, in ascending order of security.

To save changes on the page, select **OK**; to discard changes, select **Cancel**.

III-1-4 IPsec Peer Identity

This screen allows creating profiles of subject alternative names (SANs) and distinguished names/subject names that can be used for IPsec peer authentication in LAN-to-LAN or remote user dial-in VPN connections.

VPN and Remote Access >> IPsec Peer Identity

☒ Accept Any Peer ID

☐ Accept Subject Alternative Name

Type

IP

☐ Accept Subject Name

Country (C)

State (ST)

Location (L)

Organization (O)

Organization Unit (OU)

Common Name (CN)

Email (E)

Available settings are explained as follows:

Item	Description
Enable this account	Check to enable such account profile.
Profile Name	A name that allows you to identify this profile. The maximum length of the name you can set is 32 characters.
Accept Any Peer ID	When this option is selected, the router accepts any subject alternative name or subject name as valid, regardless of the type and value.
Accept Subject Alternative Name	When this option is selected, the router accepts the type and value of the specified subject alternative name as valid authentication. Supported subject alternative types are IP Address , Domain Name and E-Mail .
Accept Subject Name	When this option is selected, the router performs peer authentication by matching the values of the different subject name fields. These fields include Country (C) , State (ST) , Location (L) , Organization (O) , Organization Unit (OU) , Common Name (CN) , and Email (E) .

To save changes on the page, select **OK**; to discard changes, select **Cancel**; to clear settings on this page and revert to default settings, select **Clear**.

III-1-5 VPN Matcher Setup

Normally, to establish VPN connection, at least one peer must have a public IP address. The VPN Matcher server can help two Draytek routers behind NAT establish a secure VPN tunnel for data transmission between each other. Refer to the following figure.

There is one limitation for the VPN connection. Both routers must be behind a cone NAT, but not symmetric NAT.

Go to **VPN and Remote Access>>VPN Matcher Setup** to open the following page.

VPN and Remote Access >> VPN Matcher Setup

☒ Enable ☐ Disable

VPN Matcher Server: :

Router List Key:

Note: You can get your Router List Key on [VPN Matcher Dashboard](#).

NAT Detection

STUN Server

Group Device List

Available settings are explained as follows:

Item	Description
Enable / Disable	Click to enable / disable the function of VPN Matcher Setup.
VPN Matcher Server	The IP address of the DrayTek VPN Matcher server is defined as "vpn-matcher.draytek.com" with the port nubmer "31503".
Router List Key	Enter the authentication key for finding a Vigor router with the same group of this device from the VPN matcher server. Then set a VPN link between Vigor routers on both ends via

	VPN wizard.
OK	Click to save the settings.
STUN Server	Detect - Click to check if the NAT used by Vigor router is core NAT or not. If not, no VPN can be established.
Group Device List	Get List - After entering the Authkey above, click to get available Vigor router which is within the same group as this device.

III-1-6 OpenVPN

The OpenVPN protocol utilizes public keys, certificates, and usernames and passwords to authenticate the client. Traffic is carried over secure channels built upon industry-standard SSL/TLS encryption protocols.

With integrating of OpenVPN, Vigor router can help users to achieve more robust, reliable and secure private connections for business needs.

OpenVPN offers a convenient way for users to build a VPN between the local end and the remote end. There are two advantages of OpenVPN:

- It can be operated on different systems such as Windows, Linux, and MacOS.
- Based on the standard protocol of SSL encryption, OpenVPN can provide you with a scalable client/server mode, permitting multi-client to connect to a single OpenVPN Server process over a single TCP or UDP port.

In terms of credentials, the administrator can choose to let the router generate the certificates, or import certificates issued by third-party certificate authorities (CAs). When the router generates the certificates, it acts as the root CA to issue the trusted CA certificates (stored under Certificate Management >> Trusted CA Certificate), which are used to generate the server and client certificates used by OpenVPN (stored under Certificate Management >> Local Certificate). If, however, a certificate issued by a third-party CA is used, both the CA's certificate and the issued certificate need to be imported to the router in the Trusted CA Certificate and Local Certificate sections, respectively.

III-1-6-1 OpenVPN Server Setup

OpenVPN requires the use of certificates. Before establishing OpenVPN connection, general settings for OpenVPN service shall be configured first.

VPN and Remote Access >> OpenVPN

OpenVPN Server Setup **Client Config**

General Setup

UDP	☒ Enable
UDP Port	1194
TCP	☒ Enable
TCP Port	1194
Cipher Algorithm	AES128
HMAC Algorithm	SHA1
Certificate Authentication	☐

Certificates Setup

Certificate Source	☐ Router generated certificates
	☒ Uploading certificates to Router
<u>Trust CA</u>	default
<u>Server Certificate</u>	none

Note: OpenVPN on vigor only support TUN device interface currently. So please setup corresponding configurations on the client side.

OK

Available settings are explained as follows:

Item	Description
General Setup	
UDP	Enable - Select checkbox to enable UDP protocol for OpenVPN connections. UDP Port - Enter the UDP port number.
TCP	Enable - Select checkbox to enable TCP protocol for OpenVPN connections. TCP Port - Enter the TCP port number.
Cipher Algorithm	Select the desired cipher algorithm. Two encryption algorithms are supported: AES128 and AES256. AES256 is more secure than AES128 but may result in lower performance because it incurs higher computational overhead.
HMAC Algorithm	HMAC stands for Hash-based Message Authentication Code. It is used to validate the data integrity and authenticity of the VPN data. Select the desired HMAC hash algorithm. Two hash algorithms, SHA1 and SHA256, are supported. SHA256 is preferred as it is more robust and reliable than SHA1.
Certificate Authentication	Select this checkbox if you would like to validate that the client certificate was issued by a trusted CA.
Certificate Setup	
Certificate Source	Select a source for the certificate to be used for OpenVPN. Router generated certificates - Router-generated certificates that will be used for OpenVPN. ● GENERATE - Click to generate a certificate. ● Delete all certificate - Click to remove all certificates generated by the router. Uploading certificates to Router - Third-party certificates will be used for OpenVPN. ● Trust CA - Use the dropdown list to select a trusted CA certificate that has already been uploaded to the router. To upload Trusted CA certificates to the router, click the Trust CA label and you will be taken to the Certificate Management >> Trusted CA Certificate page to perform the operation. ● Server Certificate - Use the dropdown list to select a server certificate that has already been uploaded to the router. To upload server certificates to the router, click the Server Certificate label and you will be taken to the Certificate Management >> Local Certificate page to perform the operation.

After finishing all the settings here, please click **OK** to save the configuration.

III-1-6-2 Client Config

On this page, you can create and export the configuration required for a remote OpenVPN client to connect to the router.

VPN and Remote Access >> OpenVPN

OpenVPN Server Setup **Client Config**

Remote Server

☒ IP

☐ Domain

☐ VPN matcher

Transport Protocol

Auto Dial-Out

☒ Enable ☐ Disable

Set VPN as Default Gateway

☒ Enable ☐ Disable

File Name

.ovpn

Note:

1. Please make sure the CA files are located in the same folder with .ovpn file.
2. Please make sure that WAN can be used as OpenVPN server.

Export

Available settings are explained as follows:

Item	Description
Remote Server	The OpenVPN client will use the IP address or domain name to connect to the router. Select either IP or Domain. IP - The OpenVPN configuration file will use the numeric IP address as the server address. Domain - The OpenVPN configuration file will use the domain as the server address. You need to ensure that the domain resolves to the IP address of a router WAN port. VPN Matcher - The OpenVPN configuration file will use the IP address / URL of VPN matcher server as the remote server.
Transport Protocol	Select UDP or TCP for the protocol to be used by the OpenVPN client to connect to the router.
Auto Dial-Out	Enable - If selected, the remote client can auto-dial to this Vigor router to build an OpenVPN tunnel. Disable - Select to disable the function.
Set VPN as Default Gateway	Enable - If selected, the Vigor router will be treated as a "default" gateway for OpenVPN clients. The OpenVPN client will redirect all the traffic to the Vigor router via the OpenVPN tunnel. Disable - Select to disable the function.
File Name	Enter the filename of the configuration file to be downloaded from the router.
Export	Click this button to download the settings on this page as a file, which can be imported into a VPN client to establish OpenVPN connections.

III-1-7 Remote Dial-in User

You can manage remote access by maintaining a table of remote user profiles, so that users can be authenticated via VPN connection. Remote dial-in user profiles can be set up on this screen.

Allowed Dial-In Type ☐ PPTP ☒ IPsec Tunnel ☒ IKEv1/IKEv2 ☒ IKEv2 EAP ☒ IPsec XAuth ☒ L2TP with IPsec Policy None ☒ SSL Tunnel ☒ OpenVPN Tunnel ☐ Specify Remote Node Remote Client IP or Peer ID Netbios Naming Packet ☒ Pass ☐ Block Multicast via VPN ☐ Pass ☒ Block (for some IGMP,IP-Camera,DHCP Relay..etc.)	IKE Authentication Method ☒ Pre-Shared Key IKE Pre-Shared Key Max: 64 characters ☐ Digital Signature(X.509) None
Subnet LAN 1 ☐ Assign Static IP Address 0.0.0.0	IPsec Security Method ☒ Medium(AH) High(ESP) ☒ DES ☒ 3DES ☒ AES Local ID (optional)

Note:

1. Username can not contain characters ' \' and \\. .
2. OpenVPN tunnel does not support mOTP.
3. When your are trying to use OpenVPN tunnel and the router is behind NAT, you may have to enable the **VPN-Matcher** feature to bypass the NAT.
4. VPN-Matcher can only be used behind Cone NAT.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
User account and Authentication	Enable this account - Select to enable this profile to be used by remote dial-in users.

	Idle Timeout - Allowed idle time before the router disconnects the VPN connection. Default timeout value is 300 seconds.
Allowed Dial-In Type	Select all VPN protocols allowed for this profile. For L2TP, specify how IPsec should be applied. Options are: ● None - IPsec cannot be used with L2TP connections. ● Nice to Have - IPsec is preferred but not mandatory for L2TP connections. ● Must - IPsec is required when establish L2TP connections. Specify Remote Node - The IP address of the remote VPN client (Remote Client IP) or the Peer ID (used in IKE aggressive mode) can be optionally specified. The router will reject the connection if either of these values are entered in the profile but the remote client does not pass the value, or passes the wrong value. Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel. ● Pass - Click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. ● Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel. Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel. ● Pass - Click this button to let multicast packets pass through the router. ● Block - This is default setting. Click this button to let multicast packets be blocked by the router.
Subnet	The VPN client will receive an IP address from the DHCP pool or IP address range specified in IP Address Assignment for Dial-In Users for the selected LAN subnet. Assign Static IP Address - Alternatively, a static IP address can be set by selecting the Assign Static IP Address checkbox. User Name - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the name is limited to 23 characters. Password - Used for PPTP, L2TP or SSL Tunnel dial-in type. The length of the password is limited to 19 characters. Enable Mobile One-Time Passwords (mOTP) - Select to enable one-time passwords (Mobile-OTP). Enter the PIN Code and Secret. DrayTek's SmartVPN client has built-in support for mOTP. Third-party mOTP clients can be used to generate passwords when using other VPN clients. For more information on mOTP, visit Mobile-OTP's homepage. ● PIN Code - Enter the code for authentication (e.g., 1234). ● Secret - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).
IKE Authentication Method	Pre-Shared Key - This checkbox is available when Remote Client IP or Peer ID is specified. Check the checkbox and click IKE Pre-shared Key to enter an IKE PSK (1~63

	characters) that will be used only for this profile. Digital Signature (X.509) - To enable authentication using X.509 Peer IDs, check the checkbox then select an X.509 profile. X.509 profiles can be configured in VPN and Remote Access >> IPsec Peer Identity.
IPsec Security Method	Select all the IPsec protocols that are allowed to be used for this profile. Medium-Authentication Header (AH) means data will be authenticated, but not be encrypted. By default, this option is invoked. You can uncheck it to disable it. High (ESP) - High-Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES. Local ID (Optional)- Specify a local ID to be used when establishing a LAN-to-LAN VPN connection using IKE aggressive mode.

To save changes on the page, select **OK**; to discard changes, select **Cancel**; to clear settings on this page and revert to default settings, select **Clear**.

III-1-8 LAN to LAN

This section allows you to configure up to 32 LAN-to-LAN VPN connections. LAN-to-LAN connections can be configured to allow dial-in only, dial-out only, or both dial-in and dial-out.

Available settings are explained as follows:

Item	Description
Common Settings	Profile Name - Specify a name that allows you to identify this profile. Enable this profile - Select to enable the profile. VPN Dial-Out Through - Select the WAN connection for connections made using this profile. This setting is useful for dial-out only.

- **WANx First** - While connecting, the router will use WANx or LTE as the first channel for VPN connection. If WANx or LTE fails, the router will use another WAN interface instead.
- **WANx Only or LTE Only** - While connecting, the router will use WANx or LTE as the only channel for VPN connection.
- **WAN1 Only: Only establish VPN if WAN2 down** - If WAN2 failed, the router will use WAN1 for VPN connection.
- **WAN2 Only: Only establish VPN if WAN1 down** - If WAN1 failed, the router will use WAN2 for VPN connection.

Netbios Naming Packet - Specifies whether to allow NetBIOS naming packets to traverse through the VPN tunnel.

- **Pass** - click it to have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting.
- **Block** - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, such function can block data transmission of Netbios Naming Packet inside the tunnel.

Multicast via VPN - Specifies whether to allow multicast packets to traverse through the VPN tunnel.

- **Pass** - Click this button to let multicast packets pass through the router.
- **Block** - This is default setting. Click this button to let multicast packets be blocked by the router.

Call Direction - Specify the allowed call direction of this LAN-to-LAN profile. Four choices are available for connection mode:

- **Both** - Profile is to be used to initiate (dial out) or accept (dial in) connections.
- **Dial-Out** - Profile is to be used to initiate outgoing connections.
- **Dial-In** - Profile is to be used to accept incoming connections.

Tunnel Mode - Connection is by means of a GRE tunnel.

Always On - Select this option to maintain an always on dial-out connection.

Idle Timeout - The router will close connection if no activity is observed in the VPN connection for this many seconds. Default value is 300 seconds.

Enable PING to keep IPsec tunnel alive - This function is to help the router to determine the status of IPsec VPN connection, especially useful in the case of abnormal VPN IPsec tunnel disruption. For details, please refer to the note below. Check to enable the transmission of PING packets to a specified IP address.

This function is used to handle abnormal IPsec VPN connection disruption. It will help to provide the state of a VPN connection for router's judgment of redial. Normally, if any one of VPN peers wants to disconnect the connection, it should follow a serial of packet exchange procedure to inform each other. However, if the remote peer disconnects without notice, Vigor router will by no where to know this

	situation. To resolve this dilemma, by continuously sending PING packets to the remote host, the Vigor router can know the true existence of this VPN connection and react accordingly. This is independent of DPD (dead peer detection). PING to the IP - Enter the IP address of the remote host that located at the other-end of the VPN tunnel.
Dial-Out Settings	Type of Server I am calling - Select the VPN protocol to be used. Server IP/Host Name - IP address or DNS host name of remote VPN host. User Name - Enter a username for establishing VPN connection. Password - Enter the password for establishing VPN connection. PPP Authentication - ● PAP Only - Authenticate dial-in users using the PAP protocol only. ● PAP/CHAP/MS-CHAP/MS-CHAPv2 - Attempt to authenticate dial-in users using various CHAP protocols, and if the remote VPN client fails to authenticate, fall back to PAP. VJ compression - Specifies whether to enable Van Jacobson (VJ) header compression, which improves throughput on slow connections. IKE Authentication Method - This group of fields is applicable for IPsec Tunnels and L2TP with IPsec Policy. ● Pre-Shared Key - Input 1-63 characters as pre-shared key. ● Digital Signature (X.509) - Select one predefined Profiles set in the VPN and Remote Access >>IPsec Peer Identity. Peer ID - Select one of the predefined Profiles set in VPN and Remote Access >>IPsec Peer Identity. Local ID - Specify a local ID (Alternative Subject Name First or Subject Name First) to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode. ● Local Certificate - Select one of the profiles set in Certificate Management>>Local Certificate. IPsec Security Method - This group of fields is a must for IPsec Tunnels and L2TP with IPsec Policy. ● Medium AH (Authentication Header) means data will be authenticated, but not be encrypted. By default, this option is active. ● High (ESP-Encapsulating Security Payload)- means payload (data) will be encrypted and authenticated. Select from below: ● DES without Authentication -Use DES encryption algorithm and not apply any authentication scheme. ● DES with Authentication-Use DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm. ● 3DES without Authentication-Use triple DES encryption algorithm and not apply any authentication scheme.

	● 3DES with Authentication-Use triple DES encryption algorithm and apply MD5 or SHA-1 authentication algorithm. ● AES without Authentication-Use AES encryption algorithm and not apply any authentication scheme. ● AES with Authentication-Use AES encryption algorithm and apply MD5 or SHA-1 authentication algorithm. Advanced - Specify mode, proposal and key life of each IKE phase, Gateway, etc. The window of advance setup is shown as below:  IKE phase 1 mode -Select from Main mode and Aggressive mode. The ultimate outcome is to exchange security proposals to create a protected secure channel. Main mode is more secure than Aggressive mode since more exchanges are done in a secure channel to set up the IPsec session. However, the Aggressive mode is faster. The default value in Vigor router is Main mode. ● IKE phase 1 proposal-To propose the local available authentication schemes and encryption algorithms to the VPN peers, and get its feedback to find a match. Two combinations are available for Aggressive mode and nine for Main mode. We suggest you select the combination that covers the most schemes. ● IKE phase 2 proposal-To propose the local available algorithms to the VPN peers, and get its feedback to find a match. Three combinations are available for both modes. We suggest you select the combination that covers the most algorithms. ● IKE phase 1 key lifetime-For security reason, the lifetime of key should be defined. The default value is 28800 seconds. You may specify a value in between 900 and 86400 seconds. ● IKE phase 2 key lifetime-For security reason, the lifetime of key should be defined. The default value is 3600 seconds. You may specify a value in between 600 and 86400 seconds. ● Perfect Forward Secret (PFS)-The IKE Phase 1 key will be reused to avoid the computation complexity in phase 2. The default value is inactive this function. ● Local ID-In Aggressive mode, Local ID is on behalf of the IP address while identity authenticating with remote VPN server. The length of the ID is limited to 47 characters. Dial-Out Schedule Profile - Connect and disconnect according to schedule profiles. The default setting of this field is blank and the function will always work.
Dial-In Settings	Allowed Dial-In Type - Select permissible VPN protocols for dial-in connections.

	● PPTP - Allow the remote dial-in user to make a PPTP VPN connection through the Internet. You should set the User Name and Password of remote dial-in user below. ● IPsec Tunnel- Allow the remote dial-in user to trigger an IPsec VPN connection through Internet. ● L2TP with IPsec Policy - Allow the remote dial-in user to make a L2TP VPN connection through the Internet. You can select to use L2TP alone or with IPsec. Select from below: ■ None - Do not apply the IPsec policy. Accordingly, the VPN connection employed the L2TP without IPsec policy can be viewed as one pure L2TP connection. ■ Nice to Have - Apply the IPsec policy first, if it is applicable during negotiation. Otherwise, the dial-in VPN connection becomes one pure L2TP connection. ■ Must - Specify the IPsec policy to be definitely applied on the L2TP connection. ● SSL Tunnel- Allow the remote dial-in user to trigger an SSL VPN connection through Internet. Specify Remote VPN Gateway - You can specify the IP address of the remote dial-in user or peer ID (should be the same with the ID setting in dial-in type) by checking the box. Also, you should further specify the corresponding security methods on the right side. If you uncheck the checkbox, the connection type you select above will apply the authentication methods and security methods in the general settings. Username - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name is limited to 11 characters. Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the password is limited to 11 characters. VJ Compression - Specifies whether to enable Van Jacobson header compression, which improves throughput on slow connections. IKE Authentication Method - This section is available when IPsec tunnel is selected as the dial-out protocol. Available options are IKE Pre-shared key and X.509 digital signature. ● Pre-Shared Key - To use a pre-shared key, select this radio-button and then click the IKE Pre-Shared Key button to enter the PSK. ● X.509 Digital Signature - To use an X.509 digital signature, select this radio button and then select an X.509 IPsec Peer Identity profile. To enable authentication using X.509 Peer IDs. X.509 profiles can be configured in VPN and Remote Access >> IPsec Peer Identity. Local ID - Select whether to first match Subject Alternative Name or Subject Name during authentication. ● Alternative Subject Name - The alternative subject name (configured in Certificate Management>>Local Certificate) will be

	inspected first. ● Subject Name - The subject name (configured in Certificate Management>>Local Certificate) will be inspected first. IPsec Security Method - This setting is available when IPsec Tunnel is selected as the dial-out protocol. ● AH- Authentication Header (AH) means data will be authenticated, but not be encrypted. Select to use Authentication Header protocol. By default, this option is active. ● ESP-DES/ESP-3DES/ESP-AES - Encapsulating Security Payload (ESP) means payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES.
GRE Settings	Enable IPsec Dial-Out function GRE over IPsec- Check this box to verify data and transmit data in encryption with GRE over IPsec packet after configuring IPsec Dial-Out setting. Both ends must match for each other by setting same virtual IP address for communication. Logical Traffic- Such technique comes from RFC2890. Define logical traffic for data transmission between both sides of VPN tunnel by using the characteristic of GRE. Even hacker can decipher IPsec encryption, he/she still cannot ask LAN site to do data transmission with any information. Such function can ensure the data transmitted on VPN tunnel is really sent out from both sides. This is an optional function. However, if one side wants to use it, the peer must enable it, too. My GRE IP: Type the virtual IP for router itself for verified by peer. Peer GRE IP: Type the virtual IP of peer host for verified by router.
TCP/IP Network Settings	This section configures the whether the local router applies NAT when linking the local network to the remote network, and whether IP address translation occurs when. The view changes depending on the setting of the field From first subnet to remote network, you have to do. Select NAT if the remote VPN server expects only one IP address on the local network; otherwise, select Route. TCP/IP Network Settings has different settings depending on whether NAT or Route mode is selected. My WAN IP -This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or L2TP. Remote Gateway IP - This field is only applicable when you select PPTP or L2TP with or without IPsec policy above. The default value is 0.0.0.0, which means the Vigor router will get a remote Gateway PPP IP address from the remote router during the IPCP negotiation phase. If the PPP IP address is fixed by remote side, specify the fixed IP address here. Do not change the default value if you do not select PPTP or

	L2TP. Remote Network IP/ Remote Network Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection. For IPsec, this is the destination clients IDs of phase 2 quick mode. Local Network IP / Local Network Mask - Display the local network IP and mask for TCP / IP configuration. You can modify the settings if required. More - Click to bring up a dialog box to enter additional static routes for subnets destined for the remote network.  From first subnet to remote network, you have to do - If the remote network only allows one IP address for the local network, select NAT; otherwise, select Route. RIP Direction - Specifies the direction of Routing Information Protocol (RIP) packets. Available options are: ● TX/RX Both - can transmit or receive RIP packets ● TX Only - can only transmit but not receive RIP packets ● RX Only - can only receive but not transmit RIP packets ● Disable - RIP is disabled.
When Route is selected	When Route is selected, the available fields in the TCP/IP Network Settings section will be shown as: IPSec VPN with the Same Subnet - For both ends (e.g., different sections in a company) are within the same subnet, there is a function which allows you to build Virtual IP mapping between two ends. Thus, when VPN connection established, the router will change the IP address according to the settings configured here and block sessions which are not coming from the IP address defined in the Virtual IP Mapping list. After checking the box of IPSec VPN with the Same subnet, the options under TCP/IP Network Settings will be changed as shown below:  Remote Network IP/ Remote Network Mask - Add a static route to direct all traffic destined to this Remote Network IP Address/Remote Network Mask through the VPN connection.

	For IPsec, this is the destination clients IDs of phase 2 quick mode. Translated Local Network - This function is enabled in default. Use the drop down list to specify a LAN port as the transferred direction. Then specify an IP address. Click Advanced to configure detailed settings if required. Advanced - Add a static route to direct all traffic destined to more Remote Network IP Addresses/ Remote Network Mask through the VPN connection. This is usually used when you find there are several subnets behind the remote VPN router.  Translated Type - There are two types for you to choose. ● Whole Subnet ● Specific IP Address Enable LAN Access - Check to enable the LAN access. Virtual IP Mapping - A pop up dialog will appear for you to specify the local IP address and the mapping virtual IP address.
When NAT is selected	When NAT is selected, the available fields in the TCP/IP Network Settings section will be shown as: Change Default Route to this VPN tunnel - Select this option to direct all traffic that is not LAN-bound to this VPN tunnel. This option is functional when there is only one active WAN.

- To save changes on the LAN to LAN profile page, select **OK**; to reset the entire page to blank, select **Clear**; to discard changes, select **Cancel**.

III-1-9 VPN Trunk Management

A VPN Trunk combines TWO LAN-to-LAN VPN tunnels to provide VPN Backup or VPN Load Balance functionalities.

VPN Backup

VPN Backup provides redundant, uninterrupted VPN connectivity by constantly monitoring the health of a VPN tunnel, and fails over to the secondary VPN tunnel when the primary tunnel fails.

In a Backup VPN Trunk, only one of the two LAN-to-LAN VPN tunnels is connected at any given time. When one tunnel fails, the router will automatically start up and direct all VPN traffic destined for the trunk to the other tunnel.

VPN Load Balance

VPN Load Balance increases the bandwidth of a LAN-to-LAN connection by combining and load balancing two tunnels, with the option to direct traffic to specific tunnels by originating address, destination address or port.

In a Load Balance VPN Trunk, both LAN-to-LAN VPN tunnels are simultaneously connected. The router first attempts to match the traffic to a load balance policy rule and send it down the tunnel specified in the matching rule. Traffic not matched to any policy will be load balanced in a round-robin fashion, and the traffic ratio between the two tunnels is either determined automatically by the router or specified by the user.

In order to set up a VPN Trunk, 2 LAN-to-LAN VPN profiles must have been configured first. For details on the configuration of LAN-to-LAN VPN tunnels, see section V-1-10 LAN to LAN. When the 2 LAN-to-LAN VPN profiles are ready, follow the steps below to set up a VPN Trunk.

Creating a VPN Trunk

To create a new VPN Trunk, configure the General Setup section first.

Available settings are explained as follows:

Item	Description
General Setup	Status - Enable or disable the VPN Trunk. ● Enable - Select this to enable this VPN trunk. ● Disable - Select this to disable this VPN trunk. Profile Name - Enter a name to identify this VPN Trunk profile. Member 1/Member2 - Select LAN-to-LAN VPN profiles to be the first and second members of this VPN Trunk. Active Mode - Select the operation mode of the VPN Trunk. Backup / Load Balance - Select this to set up a Backup / Load Balance VPN Trunk. Add - Select it to add a VPN Trunk Profile using the entered information. Update - Select it to save the changes to the Status (Enable or Disable), profile name, member1 or member2. Delete - Select it to delete the selected VPN TRUNK profile. The corresponding members (LAN-to-LAN profiles) grouped in the deleted VPN TRUNK profile will be released and that profiles in LAN-to-LAN will be displayed in black.

Vigor2962 Series User's Guide

VPN and Remote Access >> VPN TRUNK Management

Item	Description
Backup Profile List and Load Balance Profile List	Set to Factory Default - Removes all VPN Trunk profiles in the Profile List. No. - The index number of VPN profile. Status - Shows whether the VPN Trunk is enabled or disabled. ● v – VPN Trunk is enabled. ● x – VPN Trunk is disabled. Name - The user-entered name that identifies the trunk profile. Member1 (Active) Type / Member2 (Active) Type - Shows the profile index, whether it is enabled or disabled, and the VPN protocol of the 2 LAN-to-LAN VPN profiles. Example: 1(YES)PPTP – the trunk member is set to use the first profile which is currently enabled and uses the PPTP protocol. Advanced - To configure advanced settings of a VPN Trunk profile, select its name from the dropdown list and click Advanced.

Advanced for Backup Profile List

If a Backup Profile was selected, the following Advanced Settings screen appears:

VPN Backup Advance Settings

Profile Name: Trunk1

ERD Mode: ☒ Normal
☐ Resume (Member 1 first)

Detail Information:
Environment Recovers Detection(ERD) Status: Normal Mode

OK Close

Profile Name - User-defined name that identifies this profile.

ERD Mode - Sets the Environment Recovery Detection (ERD) mode.

- **Normal** - Both VPN tunnels have equivalent priority.
- **Resume** - Member 1 and Member 2 VPN tunnels are primary and secondary connections, respectively. The router will always attempt to use Member 1 first, and only fail over to Member 2 if Member 1 is down.

Detail Information - Provides a detailed explanation of the ERD mode.

To save Advanced Settings for the profile, select **OK**; to close without saving changes, select **Close**.

Advanced for Load Balance Profile List

If a Load Balance Profile was selected, the following Advanced Settings screen appears:

VPN Load Balance Advance Settings

Profile Name: Trunk2

Load Balance Algorithm: ☒ Round Robin
☐ Weighted Round Robin
☒ Auto Weighted
☐ According to Speed Ratio (Member1:Member2): 50:50

VPN Load Balance Policy: ☒ Edit ☐ Insert after

Tunnel Bind Table Index: (1~64)

Active: Active

Binding Dial Out Profile: 1

Src IP Start: 0.0.0.0 End: 255.255.255.255

Dest IP Start: 0.0.0.0 End: 255.255.255.255

Dest Port Start: 1 End: 65535

Protocol: ANY 0

OK Close

Detail Information
[VPN Load Balance Profile name: Trunk2]
[Algorithm: Round Robin]

Profile Name - User-defined name that identifies this profile.

Load Balance Algorithm - Configures how load balancing is

	performed. ● Round Robin – All outgoing connections that do not match to any load balance policy are evenly distributed between the tunnels. ● Weighted Round Robin -- All outgoing connections that do not match to any load balance policy are distributed between the tunnels based on a ratio that is either automatically determined by the router (Auto Weighted), or specified by the user (According to Speed Ratio). VPN Load Balance Policy - This section allows the modification or addition of load balance policy profiles. Edit / Insert After - Select Edit to modify the existing load balance profile with index specified in Tunnel Bind Table Index, or Insert After to insert a new load balance profile immediately after the index position specified in Tunnel Bind Table Index. Tunnel Bind Table Index- 64 Binding tunnel tables are provided by this device. In Edit mode, the profile that matches this index will be updated. In Insert After mode, a new profile will be inserted immediately after the policy having this index. Active – Includes Active and Clear. In which, ● Active - All information will be saved into a load balance profile. ● Clear – The profile with index matching Tunnel Bind Table Index will be deleted. Binding Dial Out Profile – The LAN-to-LAN VPN tunnel to which traffic matching this policy will be sent. Src IP Start /End- Specify source IP addresses as starting point and ending point. Dest IP Start/End – Specify the target IP addresses as starting point and ending point. Dest Port Start /End- Specify the target port range if the protocol is TCP or UDP. Protocol – Specify the protocol of the traffic. Detail Information - Shows all the information about the Load Balance profile. To save Advanced Settings for the profile, select OK; to close without saving changes, select Close.
Add	Select it to add a VPN Trunk Profile using the entered information.
Update	Make modifications as necessary in the General Setup section. Select it to save the changes to the Status (Enable or Disable), profile name, member1 or member2.
Delete	Select it to remove the VPN TRUNK profile. The corresponding members (LAN-to-LAN profiles) grouped in the deleted VPN TRUNK profile will be released and that profiles in LAN-to-LAN will be displayed in black.

III-1-10 Connection Management

You can initiate outbound LAN-to-LAN VPN sessions, and view and disconnect all current LAN-to-LAN and dial-up VPN sessions.

VPN and Remote Access >> Connection Management

Dial-out Tool | Refresh |

General Mode:		Dial
Backup Mode:		Dial
Load Balance Mode:		Dial

VPN Connection Status

All VPN Status		LAN-to-LAN VPN Status		Remote Dial-in User Status				
VPN	Type	Remote IP	Virtual Network	Tx Pkts	Tx Rate(bps)	Rx Pkts	Rx Rate(bps)	UpTime
xxxxxxxx : Data is encrypted.								
xxxxxxxx : Data isn't encrypted.								

Available settings are explained as follows:

Item	Description
Refresh	Click to manually reload the page to refresh VPN connection information.
Dial-out Tool	The Dial-out Tool section can be used to initiate outgoing LAN-to-LAN VPN sessions. General Mode - It lists all LAN-to-LAN VPN profiles that do not belong to enabled VPN Trunk profiles. To manually dial a LAN-to-LAN VPN profile, select it from the combo box, and click the Dial button to the right. The VPN connection built by General Mode does not support VPN backup function.  Backup Mode - It lists all Backup VPN Trunk profiles. To manually dial a Backup VPN Trunk profile, select it from the combo box, and click the Dial button to the right. The VPN connection built by Backup Mode supports VPN backup function.  Load Balance Mode - It lists all Load Balance VPN Trunk profiles. To manually dial a Load Balance VPN Trunk profile, select it from the combo box, and click the Dial button to the right.

	Dial - Click this button to execute dial out function. If the connect is successfully made, it will show up in the VPN Connection Status section below.
VPN Connection Status	VPN - Displays the VPN profile number and the profile name. Type - Displays the VPN protocol used for the connection Remote IP - Displays the remote IP address of the VPN connection. Virtual Network - Displays the IP subnet used by the VPN connection. Tx Pkts - Displays the number of packets that have been transmitted through the VPN connection. Tx Rate(Bps) - Displays the current upstream speed of the VPN connection. Rx Pkts - Displays the number of packets that have been received through the VPN connection. Rx Rate(Bps) - Displays the current downstream speed of the VPN connection. UpTime - Displays the elapsed time of the VPN connection. Drop - Click this button to disconnect this VPN connection.

III-2 SSL VPN

SSL VPN (Secure Sockets Layer virtual private network) is a form of VPN that encrypts traffic using SSL, which is the same technology used on secured websites. Because of SSL's prominence as an encryption protocol on the Internet, most networks have few restrictions on SSL traffic, and as a result SSL VPN is more likely to work when other VPN technologies experience difficulties due to obstacles such as firewalls and Network Address Translation (NAT).

In short,

- It is not necessary for users to preinstall VPN client software for executing SSL VPN connection.
- There are less restrictions for the data encrypted through SSL VPN in comparing with traditional VPN.

Web User Interface

III-2-1 General Setup

The general settings of the SSL VPN Server and SSL Tunnel are entered on this page.

SSL VPN >> SSL General Setup

SSL General Setup

Bind to WAN	☒ WAN1	☒ WAN2
Port	443 (Default: 443)	
Server Certificate	self-signed	

Available settings are explained as follows:

Item	Description
Bind to WAN	Select the WAN interfaces to accept inbound SSL VPN connections.
Port	The port to be used for SSL VPN server. This is separate from the management port which is configured in System Maintenance>>Management . The default setting is 443.
Server Certificate	When the client does not set any certificate, default certificate will be used for HTTPS and SSL VPN server. Specify the certificate to be used for SSL connections. Select a certificate from imported or generated certificates on the router, or choose Self-signed to use the router's built-in default certificate. The selected certificate can be used in SSL VPN server and HTTPS Web Proxy.

After finishing all the settings here, please click **OK** to save the configuration.

III-2-2 User Account

With SSL VPN, Vigor2962 Series let teleworkers have convenient and simple remote access to central site VPN. The teleworkers do not need to install any VPN software manually. From regular web browser, you can establish VPN connection back to your main office even in a guest network or web cafe. The SSL technology is the same as the encryption that you use for secure web sites such as your online bank. The SSL VPN can be operated in either full tunnel mode or proxy mode. Now, Vigor2962 Series allows up to 16 simultaneous incoming users.

SSL VPN authentication and permissions management are implemented through user accounts. SSL VPN user accounts are shared with the remote dial-in user accounts used by other VPN protocols such as PPTP and L2TP, and hence SSL VPN's User Account setup page **SSL VPN >> User Account** is identical to **VPN and Remote Access >> Remote Dial-in user**.

SSL VPN >> Remote Dial-in User

Info

SSL VPN can work only with Smart VPN Client developed by DrayTek. After configuring SSL VPN profile, download the utility of Smart VPN Client to build SSL VPN connection.

Click each index to edit one remote user profile.

SSL VPN >> Remote Dial-in User

Index No. 1

User account and Authentication ☐ Enable this account Idle Timeout 300 second(s) Allowed Dial-In Type ☐ PPTP ☒ IPsec Tunnel ☒ IKEv1/IKEv2 ☒ IKEv2 EAP ☒ IPsec XAuth ☒ L2TP with IPsec Policy None ☒ SSL Tunnel ☒ OpenVPN Tunnel ☐ Specify Remote Node Remote Client IP or Peer ID Netbios Naming Packet ☒ Pass ☐ Block Multicast via VPN ☐ Pass ☒ Block (for some IGMP,IP-Camera,DHCP Relay..etc.) Subnet LAN 1 ☐ Assign Static IP Address 0.0.0.0	Username ??? Password Max: 19 characters ☐ Enable Mobile One-Time Passwords(mOTP) PIN Code Secret IKE Authentication Method ☒ Pre-Shared Key IKE Pre-Shared Key Max: 64 characters ☐ Digital Signature(X.509) None IPsec Security Method ☒ Medium(AH) High(ESP) ☒ DES ☒ 3DES ☒ AES Local ID (optional)

Note:

1. Username can not contain characters ' \' and \\. .
2. OpenVPN tunnel does not support mOTP.
3. When your are trying to use OpenVPN tunnel and the router is behind NAT, you may have to enable the **VPN-Matcher** feature to bypass the NAT.
4. VPN-Matcher can only be used behind Cone NAT.

Available settings are explained as follows:

Item	Description
User account and Authentication	Enable this account - Check the box to enable this function. Idle Timeout- If the dial-in user is idle over the limitation of the timer, the router will drop this connection. By default, the Idle Timeout is set to 300 seconds. User Name - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name/password is limited to 23 characters. Password - This field is applicable when you select PPTP or L2TP with or without IPsec policy above. The length of the name/password is limited to 19 characters. Enable Mobile One-Time Passwords (mOTP) - Check this box to make the authentication with mOTP function. ● PIN Code - Type the code for authentication (e.g, 1234). ● Secret - Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6).
Allowed Dial-In Type	Select the VPN protocols that this user is allowed to use. PPTP - Allow the remote dial-in user to establish VPN

Item	Description
	connections with the PPTP protocol. You should set the User Name and Password of remote dial-in user below. IPSec Tunnel - Allow the remote dial-in user to establish IPSec tunnels. L2TP with IPSec Policy - Allow the remote dial-in user to establish L2TP VPN connections. You can select to use L2TP alone or with IPSec. Select one of the following options: ● None - Do not apply the IPSec policy. L2TP connections are not encrypted. ● Nice to Have - Attempt to establish an IPSec secure channel first, before starting an L2TP session. If an IPSec secure channel cannot be established with the remote client, fall back to an L2TP connection without encryption. ● Must - Require that an IPSec secure channel be established before starting an L2TP connection. Disconnect if an IPSec secure channel cannot be established. SSL Tunnel - Select to allow the remote dial-in user to initiate SSL VPN tunnels. OpenVPN Tunnel - Select to allow the remote dial-in user to initiate OpenVPN tunnels. Specify Remote Node - Select this option to specify the remote IP address, ISDN number or peer ID (used in IKE aggressive mode) used to authenticate the remote dial-in user. If this option is not selected, the authentication and security methods specified in the general settings will be used instead. Netbios Naming Packet ● Pass - Select this to allow Netbios name inquiries between the hosts located on both sides of VPN Tunnel. ● Block - Select this to block Netbios name inquiries between remote and local hosts. Multicast via VPN - Some programs might send multicast packets via VPN connection. ● Pass - Select this to allow multicast packets to pass through VPN connections. ● Block - Select this to block multicast packets from passing through the VPN connections. This is the default setting.
Subnet	Select a subnet for this VPN profile. Assign Static IP Address - If you would like to assign a static IP address to this user, enter it here.
IKE Authentication Method	All fields in this section, except for Digital Signature (X.509), are applicable to IPSec Tunnels and L2TP connections with IPSec Policy when you specify the IP address of the remote node (Remote Client IP in Specify Remote Node above). Digital Signature (X.509) can be used with IPSec tunnels regardless of the IP address of the remote node is specified or not. Pre-Shared Key - Select this checkbox to enable Pre-shared Key function and enter a string of up to 63 characters as the pre-shared key. Digital Signature (X.509) - Select this checkbox to enable

Item	Description
	X.509 Digital Signature and choose a predefined profile that has been set in VPN and Remote Access >> IPSec Peer Identity .
IPSec Security Method	When the remote node is specified, all fields in this section are required for IPSec Tunnels and L2TP connections with IPSec Policy. Select any combination of Medium, DES, 3DES and AES security methods as desired. Medium (AH, Authentication Header) - Data will be authenticated, but not be encrypted. By default, this option is enabled. You can uncheck it to disable it. High (ESP, Encapsulating Security Payload) - Payload (data) will be encrypted and authenticated. You may select encryption algorithm from Data Encryption Standard (DES), Triple DES (3DES), and AES. Local ID - Specify a local ID to be used for Dial-in setting in the LAN-to-LAN Profile setup. This item is optional and can be used only in IKE aggressive mode.

After finishing all the settings here, please click **OK** to save the configuration.

III-3 Certificate Management

A digital certificate is an electronic document issued by a certification authority (CA) to an entity to prove ownership of a public key. It contains identifying information including the issued-to party's name, a serial number, expiration dates etc., and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real. Vigor router supports digital certificates that conform to the X.509 standard.

In this section, you can generate and manage local digital certificates, and import trusted CA certificates. Be sure that the system time is correct on the router so that certificates will not be erroneously considered to be invalid because of an incorrect system time falling outside of the certificate's valid time period. The easiest way to accomplish this is by periodically synchronizing the system time to a Network Time Protocol (NTP) server.

Web User Interface

The image below shows the menu items for Certificate Management.

III-3-1 Local Certificate

You can generate, import or view local certificates on this page.

Certificate Management >> Local Certificate

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
---	---	---	View	Delete
---	---	---	View	Delete
---	---	---	View	Delete

Note:

1. Please setup the "System Maintenance >> Time and Date" correctly before signing the local certificate.
2. The Time Zone MUST be setup correctly!!

Available settings are explained as follows:

Item	Description
Name	Displays the Name that identifies the certificate.
Subject	Displays the Subject Name entries of the certificate.
Status	Displays the status of the certificate. Status is one of Requesting.
Modify	View - Click to view details about the certificate. A screen that looks like the following will be displayed, showing the Subject Name, Subject Alternative Name, and the certificate content.

	
	Delete – Click to remove the certificate.
Generate	Click to fill out details about a certificate, and start the generation process.
Import	Click to update an existing certificate.
Refresh	Click to refresh the page to display the latest certificate information.

GENERATE

Use this screen to submit a request to your root CA to generate a certificate.

Certificate Management >> Local Certificate

Generate Certificate Signing Request

Certificate Name	
Subject Alternative Name	
Type	IP Address

[GENERATE](#) [IMPORT](#) [REFRESH](#)

IMPORT

Vigor router allows you to generate a certificate request and submit it the CA server, then import it as "Local Certificate". If you have already gotten a certificate from a third party, you may import it directly. The supported types are PKCS12 Certificate and Certificate with a private key.

Click this button to import a saved file as the certification information. There are three types of local certificate supported by Vigor router.

Import X509 Local Certificate

Upload Local Certificate

Select a local certificate file.

Certificate file: 未選擇任何檔案Click [Import](#) to upload the local certificate.

Upload PKCS12 Certificate

Select a PKCS12 file.

PKCS12 file: 未選擇任何檔案Password: Click [Import](#) to upload the PKCS12 file.

Upload Certificate and Private Key

Select a certificate file and a matchable Private Key.

Certificate file: 未選擇任何檔案Key file: 未選擇任何檔案Password: Click [Import](#) to upload the local certificate and private key.

Note:

1. If a certificate chain consists of a CA certificate plus one or more intermediate CA certificates, please combine them to one before uploading it.
2. The certificate file size cannot be over 8KB.

Available settings are explained as follows:

Item	Description																				
Upload Local Certificate	Certificate file - Click Browse to select a local certificate file. Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen. If you have done well in certificate generation, the Status of the certificate will be shown as “OK”. Import X509 Local Certificate Congratulation! Local Certificate has been imported successfully. Please click Back to view the certificate. X509 Local Certificate Configuration <table><thead><tr><th>Name</th><th>Subject</th><th>Status</th><th colspan="2">Modify</th></tr></thead><tbody><tr><td>draytekdemo</td><td>/O=Draytek/OU=Draytek Sales/...</td><td>OK</td><td> View </td><td> Delete </td></tr><tr><td>---</td><td>---</td><td>---</td><td> View </td><td> Delete </td></tr><tr><td>---</td><td>---</td><td>---</td><td> View </td><td> Delete </td></tr></tbody></table> GENERATE IMPORT REFRESH	Name	Subject	Status	Modify		draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	View	Delete	---	---	---	View	Delete	---	---	---	View	Delete
Name	Subject	Status	Modify																		
draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	View	Delete																	
---	---	---	View	Delete																	
---	---	---	View	Delete																	
Upload PKCS12 Certificate	It allows users to import the certificate whose extensions are usually .pfx or .p12. And these certificates usually need passwords. Note that PKCS12 is a standard for storing private keys and certificates securely. It is used in (among other things) Netscape and Microsoft Internet Explorer with their import and export options. PKCS12 file - Click Browse to select a PKCS12 certificate file. Password - Enter the password associated with the certificate																				

	and key files. Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen.
Upload Certificate and Private Key	It is useful when users have separated certificates and private keys. And the password is needed if the private key is encrypted. Certificate file - Click Browse to select a local certificate file. Key file - Password - Enter the password associated with the certificate and key files. Import - Click to import selected certificate file to router. Cancel - Click to return to the main Local Certificate screen.

If the import was successful, you will see the following confirmation screen:

Import X509 Local Certificate

Congratulation!

Local Certificate has been imported successfully.

Please click [Back](#) to view the certificate.

X509 Local Certificate Configuration

Name	Subject	Status	Modify	
draytekdemo	/O=Draytek/OU=Draytek Sales/...	OK	View	Delete
---	---	---	View	Delete
---	---	---	View	Delete

[GENERATE](#)
[IMPORT](#)
[REFRESH](#)

REFRESH

Click this button to refresh the information listed below.

III-3-2 Trusted CA Certificate

Trusted CA certificate lists three sets of trusted CA certificate. In addition, you can build a RootCA certificate if required.

When the local client and remote client are required to make certificate authentication (e.g., IPsec X.509) for data passing through SSL tunnel and avoiding the attack of MITM, a trusted root certificate authority (Root CA) will be used to authenticate the digital certificates offered by both ends.

However, the procedure of applying digital certificate from a trusted root certificate authority is complicated and time-consuming. Therefore, Vigor router offers a mechanism which allows you to generate root CA to save time and provide convenience for general user. Later, such root CA generated by DrayTek server can perform the issuing of local certificate.

Info

Root CA can be deleted but not edited. If you want to modify the settings for a Root CA, please delete the one and create another one by clicking Create Root CA.

You can create, import and view root and trusted certificate authority certificates on this screen.

Certificate Management >> Trusted CA Certificate

X509 Trusted CA Certificate Configuration

Name	Subject	Status	Modify	
Root CA	---	---	Create	
Trusted CA-1	---	---	View	Delete
Trusted CA-2	---	---	View	Delete
Trusted CA-3	---	---	View	Delete

Note:

1. Please setup the "System Maintenance >> Time and Date" correctly before you try to generate a RootCA!!
2. The Time Zone MUST be setup correctly!!

IMPORT

REFRESH

Available settings are explained as follows:

Item	Description
Create	Click to create a new root CA.
Name	Name that identifies the certificate.
Subject	Shows the Subject Name of the certificate.
Status	Displays the status of the certificate.
Modify	Create - Click to fill out details about a certificate, and start the generation process. View - Click to view details of the certificate.

	 Delete - Click to delete the certificate.
Import	Click to import an existing certificate.
Refresh	Click to refresh the page to display the latest certificate information.

Creating a Root CA

Click **Create** to open the following page.

Certificate Management >> Root CA Certificate

Generate Root CA

Certificate Name	Root CA
Subject Alternative Name	
Type	IP Address ▼
IP	
Subject Name

Available settings are explained as follows:

Item	Description
Certificate Name	Display the name of root CA.
Type	Select the type of Subject Alternative Name and enter its value.
Country (C)	Country in which your organization is located.
State (ST)	State or province where your organization is located.

Location (L)	City where you're your organization is located.
Organization (O)	Legal name of your organization.
Organization Unit (OU)	Department within your organization that you wish to be associated with this certificate.
Common Name (CN)	Fully-qualified domain name / WAN IP that will be used to reach your server.
Email (E)	Email address of the entry.
Key Type	Key type is hard set to RSA.
Key Size	Choose between 1024 and 2048 bit.
Algorithm	Choose between SHA-1 and SHA-256.
Generate	Click to submit generate request to the CA server.

Importing a Trusted CA

To import a pre-saved trusted CA certificate, please click **IMPORT** to open the following window.

Certificate Management >> Trusted CA Certificate

Import X509 Trusted CA Certificate

Select a trusted CA certificate file.

Click **Import** to upload the certification.

Available settings are explained as follows:

Item	Description
Browse	Click Browse to select a local certificate file.
Import	Click to import selected certificate file to router. The one you imported will be listed on the Trusted CA Certificate window.
Cancel	Click to return to the main Trusted CA Certificate screen.

III-3-3 Certificate Backup

You can back up Local and Trusted CA certificates on the router to a file.

Certificate Management >> Certificate Backup

Certificate Backup / Restoration

Backup

Encrypt password:

Confirm password:

Click to download certificates to your local PC as a file.

Restoration

Select a backup file to restore.

未選擇任何檔案

Decrypt password:

Click to upload the file.

Available settings are explained as follows:

Item	Description
Backup	
Encrypt password/Confirm password	Enter the password with which you wish to encrypt the certificate.
Backup	Click to download the certificate.
Restoration	
Select a backup file to restore	Click Browse to select the backup file you wish to restore.
Decrypt password	Enter the password that was used to encrypt the certificates.
Restore	Click to retrieve the certificate.

III-3-4 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate will be applied in SSL VPN, HTTPS, and so on. In addition, it can be created for free by using a wide variety of tools.

Certificate Management >> Self-Signed Certificate

Self-Signed Certificate Information

Certificate Name :	self-signed

Note:

1. Please setup the [System Maintenance >> Time and Date](#) correctly before you try to regenerate a self-signed certificate!!
2. The Time Zone MUST be setup correctly!!

Regenerate

Click **Regenerate** to open the Regenerate Self-Signed Certificate window. Enter all requested information including certificate name (used to differentiate different certificates), subject alternative name type and relational settings for subject name. Then click GENERATE.

This page is left blank.

Part IV Security

Firewall

While the broadband users demand more bandwidth for multimedia, interactive applications, or distance learning, security has been always the most concerned. The firewall of the Vigor router helps to protect your local network against attack from unauthorized outsiders. It also restricts users in the local network from accessing the Internet.

CSM

CSM is an abbreviation of Central Security Management which is used to control IM/P2P usage, filter the web content and URL content to reach a goal of security management.

IV-1 Firewall

Basic

A network firewall monitors traffic travelling between networks, with the ability to selectively allow or block traffic using a predefined set of security rules. This helps to maintain the integrity of networks by stopping unauthorized access and the exchange of sensitive information.

Firewall Facilities

LAN users are provided with secured protection by the following firewall facilities:

- User-configurable IP filter (Call Filter/ Data Filter).
- Stateful Packet Inspection (SPI): tracks packets and denies unsolicited incoming data
- Selectable Denial of Service (DoS) /Distributed DoS (DDoS) attacks protection

IP Filters

Depending on whether there is an existing Internet connection, or in other words “the WAN link status is up or down”, the IP filter architecture categorizes traffic into two: **Call Filter** and **Data Filter**.

- **Call Filter** - Whenever the router needs to initiate a PPP connection (such as PPPoE, PPPoA, and VPN connections) to route traffic to the Internet, the traffic pattern that triggers the connection is checked against the Call Filter rules. If the traffic is not blocked by the filter, the router establishes the PPP connection to send the packet to the Internet.
- **Data Filter** - All traffic, both incoming and outgoing, that does not trigger a PPP connection attempt (either because a PPP connection is not necessary, or the required PPP connection has already been established) is checked against the Data Filter, and will be allowed or blocked according to the rules configured within.

The following flowcharts show how the router treats incoming traffic and outgoing traffic respectively.

Stateful Packet Inspection (SPI)

Stateful inspection is a firewall architecture that works at the network layer. Unlike legacy static packet filtering, which examines a packet based on the information in its header, stateful inspection builds up a state machine to track each connection traversing all interfaces of the firewall and makes sure they are valid. The stateful firewall of Vigor router not only examines the header information also monitors the state of the connection.

Denial of Service (DoS) Defense

DoS attacks are categorized into two types: flooding-type attacks and vulnerability attacks. Flooding-type attacks attempts to exhaust system resources while vulnerability attacks attempts to paralyze the system by exploiting vulnerabilities of protocols or operation systems.

Vigor's DoS Defense functionality detects DoS attacks and mitigates their damage by inspecting every incoming packet, and malicious packets will be blocked. If Syslog is enabled, alert messages will also be sent. Abnormal traffic flow such as flood and port scan attacks that exceed allowable thresholds are also blocked.

The below shows the attack types that DoS/DDoS defense function can detect:

1. SYN flood attack	9. SYN fragment
2. UDP flood attack	10. Fraggle attack
3. ICMP flood attack	11. TCP flag scan
4. Port Scan attack	12. Tear drop attack
5. IP options	13. Ping of Death attack
6. Land attack	14. ICMP fragment
7. Smurf attack	15. Unassigned Numbers
8. Trace route	

Web User Interface

Below shows the menu items for Firewall.

IV-1-1 General Setup

General Setup Page

Such page allows you to enable / disable Data Filter, determine general rule for filtering the incoming and outgoing data.

Firewall >> General Setup

General Setup

General Setup

Default Rule

Data Filter

☒ Enable

☐ Disable

Start Filter Set

Set#1

☒ Allow pass inbound fragmented large packets (required for certain games and streaming)

☒ Enable Strict Security Firewall

Block routing connections initiated from WAN

☐ IPv4

☒ IPv6

Note:

Packets are filtered by firewall functions in the following order:
1.Data Filter Sets and Rules 2.Block routing connections initiated from WAN 3.Default Rule

OK

Cancel

Available settings are explained as follows:

Item	Description
Data Filter	Select Enable to activate the Data Filter function, and then choose a Start Filter Set.

Allow pass inbound fragmented large packets	Certain games and video streaming service use fragmented UDP packets to transfer data. Enabling this option allows these applications to function properly. If this option is not enabled, the router will attempt to reassemble fragmented packets up to a certain value (e.g., 15xx~2102) kilobytes long. Packets larger than the certain value will be discarded. If this option is enabled, the router always passes fragmented packets without reassembling them, regardless of the size of the packet.
Enable Strict Security Firewall	If this option and the Web Content Filter (WCF) are both enabled, web traffic will be blocked if the WCF server fails to respond to lookup requests.
Block routing connections initiated from WAN	IPv6 - IPv6 does not make use of Network Address Translation (NAT), so all LAN hosts receive public IPv6 IP addresses that are exposed to the WAN. Enable this option to block WAN hosts from connecting to LAN hosts using IPv6. IPv4 - For LAN hosts receiving WAN IPv4 addresses using the IP routed subnet, enable this option to prevent WAN hosts from connecting to LAN hosts. This option has no effect on LAN hosts on private LAN subnets.

To save changes on the page, click **OK**. To discard changes, click **Cancel**.

Traffic is filtered by firewall functions in the following order:

1. Data Filter Sets and Rules
2. Block connections initiated from WAN
3. Default Rule

Default Rule Page

Such page allows you to choose filtering profiles including QoS, Load-Balance policy, WCF, APP Enforcement, URL Content Filter, for data transmission via Vigor router.

The default rule applies to all traffic that is not constrained by other filters or rules.

Firewall >> General Setup

General Setup

General Setup

Default Rule

Actions for default rule:

Application	Action/Profile	Syslog
Filter	Pass ▾	☐
Sessions Control	0 / 150000	☐

<u>DNS Filter</u>	None ▾	☐

Advance Setting

Edit

OK

Cancel

Available settings are explained as follows:

Item	Description
Filter	Select Pass or Block for the packets that do not match with the filter rules. When the setting is Block, all other fields on the page are disabled because they are not applicable.
Sessions Control	The current number of sessions is shown before the slash, followed by the maximum number of concurrent sessions allowed, which is configurable. The default maximum is 60000, which is also the upper limit of the value.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	This setting is only available when Rule-Based is selected in User Management>>General Setup. The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature. ● None: User Management does not apply to the default rule. ● User Object: The default rule only applies to the selected user. ● [Create New User]: Select this to create a new user. ● User Group: The default rule only applies to the

	selected User Group. ● [Create New Group]: Select this to create a new user group. ● ALL: The default rule applies to all defined users. ● Create New User or Create New Group item will appear for you to click to create a new one if there is no user profile or group profile existed. Syslog - Select to allow User Management to log messages in Syslog.
APP Enforcement	Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature. Syslog - Select to allow APP Enforcement to log messages in Syslog.
URL Content Filter	Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature. Syslog - Select to allow URL Content Filter to log messages in Syslog. Logging action is configured at the profile level in CSM>>URL Content Filter Profile, Log.
Web Content Filter	Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Syslog - Select to allow Web Content Filter to log messages in Syslog. Logging action is configured at the profile level in the Web Content Filter Profile Table section in CSM>>Web Content Filter Profile, Log.
DNS Filter	Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Syslog - Select to allow DNS Filter to log messages in Syslog. Logging action is configured at the profile level in the DNS Filter Profile Table section in CSM>>DNS Filter Profile, SysLog.
Advance Setting	Click Edit to open the configuration window for Advanced Settings. However, it is recommended to use the default settings. Firewall >> General Setup Advance Setting Codepage: ANSI(1252)-Latin I Window size: 65535 Session timeout: 60 Minute OK Close Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL

Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed.

If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.

Window size – Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper.

Session timeout – Sets the timeout sessions are allowed to idle before they are removed from the system.

After finishing all the settings here, please click **OK** to save the configuration.

IV-1-2 Filter Setup

Click **Firewall** and click **Filter Setup** to bring up the setup page.

Available settings are explained as follows:

Item	Description
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Direction	Set the direction of packet flow. It is for Data Filter only. For the Call Filter, this setting is not available since Call Filter is only applied to outgoing traffic. LAN/RT/VPN -> WAN LAN/RT/VPN -> WAN WAN -> LAN/RT/VPN LAN/RT/VPN -> LAN/RT/VPN Note: RT means routing domain for 2nd subnet or other LAN.

Source/Destination IP	To set the IP address manually, please choose Any Address/Single Address/Range Address/Subnet Address as the Address Type and Enter them in this dialog.
Protocol	Specify the protocol(s) which this filter rule will apply to.
Source Port / Destination Port	(=) - when the first and last value are the same, it indicates one port; when the first and last values are different, it indicates a range for the port and available for this service type. (!=) - when the first and last value are the same, it indicates all the ports except the port defined here; when the first and last values are different, it indicates that all the ports except the range defined here are available for this service type. (>) - the port number greater than this value is available. (<) - the port number less than this value is available for this profile.

3. Click **Next** to get the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1

Based on the settings in the previous pages, we guess you want to have: **Pass**
The current setting is :

☒ **Pass Immediately**

APP Enforcement:

URL Content Filter:

Web Content Filter:

DNS Filter:

☐ **Block Immediately**

Available settings are explained as follows:

Item	Description
Pass Immediately	Packets matching the rule will be passed immediately. APP Enforcement - Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature. URL Content Filter - Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature. Web Content Filter - Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. DNS Filter - Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile.
Block Immediately	Packets matching the rule will be dropped immediately.

4. After choosing the mechanism, click **Next** to get the summary page for reference.

Firewall >> Edit Filter Set >> Edit Filter Rule Wizard

Filter Set 1 Rule 1 Configuration Summary

Comments :	Block NetBios
Direction	
LAN/RT/VPN -> WAN	
Criteria	
Source IP	Any
Destination IP	Any
Protocol	TCP/UDP, Port: from 137 ~ 139 to any
More options	
Pass Immediately	
APP Enforcement :	None
URL Content Filter :	None
Web Content Filter :	None
DNS Filter :	None

5. If there is no error, click **Finish** to complete wizard setting.

To use **Advance** Mode, do the following steps:

1. Click the **Advance Mode** radio button.
2. Click **Index 1** to access into the following page.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 1

☒ Enable	Block NetBios		
Comments			
<u>Schedule Profile</u>	None	None	None
☐ Clear sessions when schedule is ON			
Direction	LAN/RT/VPN -> WAN	Advanced	
Source IP/Country	Any	Edit	
Destination IP/Country	Any	Edit

<u>Web Content Filter</u>	None	☐	
<u>DNS Filter</u>	None	☐	
Advance Setting	Edit		

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable the filter rule.
Comments	Enter filter set comments/description. Maximum length is 14- character long.
Schedule Profile	Select Schedule indexes to allow the rule to be enabled at specific times. You may choose up to 4 out of the 15 schedules in Applications >> Schedule. The rule is always enabled when no indexes have been selected.
Clear sessions when schedule ON	Select this option to clear existing sessions when the rule is changes is enabled by a schedule profile. All connections will be reset.
Direction	Specify the direction of traffic flow to which this filter rule applies. Note that when the rule belongs to the Call Filter, the WAN -> LAN/RT/VPN option has no effect as Call Filter applies only to outgoing traffic. LAN/RT/VPN -> WAN LAN/RT/VPN -> WAN WAN -> LAN/RT/VPN LAN/RT/VPN -> LAN/RT/VPN

	Note: RT stands for the routing domain for 2nd subnet or other LAN. Advanced - After choosing the direction, click the Advanced button to specify interfaces for traffic flow. 
Source IP/ Country and Destination IP / Country	Click Edit to bring up the following dialog box to configure the source and destination IP addresses or country objects.  To set the IP address manually, please choose an Address Type and enter required information. Address Type – Select from one of the following: ● Any Address – All IP addresses ● Single Address – Enter one IP address in Start IP address ● Range Address – Enter the Start and End IP Addresses ● Subnet Address – Enter the Start IP Address and the Subnet Mask. Example: Start IP Address 192.168.1.1 and Subnet Mask 255.255.255.128 means is the same as having the Start IP Address as 192.168.1.1 and the End IP Address as 192.168.1.127. ● Group and Objects – Allows selection of predefined IP Groups and IP Objects. For details on IP Groups and Objects, see the chapter on Objects Setting. ● Country Object - Allows selection of predefined country objects.
Service Type	Click Edit to bring up the following dialog box to configure the Service Type.

	
	Service Type - To set the service type manually, please choose User defined as the Service Type. ● User defined - Configure the protocol, source and destination ports manually. ● Group and Objects - Select preconfigured Service Groups or Objects. Protocol - Specify the protocol(s) which this filter rule will apply to. Source/Destination Port - ● (=) - any port that falls within the specified range ● (!=) - any port that falls outside of the specified range ● (>) - a port whose number is greater than the specified value ● (<) - a port whose number is smaller than the specified value Service Group/Object - Use the drop down list to select the desired Service Groups or Objects.
Fragments	Action to be taken for fragmented packets. This option is valid for Data Filter rules only. ● Don't care -No action will be taken towards fragmented packets. ● Unfragmented -Apply the rule to unfragmented packets. ● Fragmented - Apply the rule to fragmented packets. ● Too Short - Apply the rule only to packets that are too short to contain a complete header.
Filter	Action to be taken when packets match the rule. Block Immediately - Packets matching the rule will be dropped immediately. Pass Immediately - Packets matching the rule will be passed immediately. Block If No Further Match - Block the packet if this the last matching rule for this packet in the filter. Pass If No Further Match - Pass the packet if this is the last matching rule for this packet in the filter.
Branch to other Filter Set	If the packet matches the filter rule, and the Filter action is Block If No Further Match or Pass If No Further Match, you can specify the next filter set to be applied, thus skipping the rest of the rules in the current filter set.
Sessions Control	The current number of sessions is shown before the slash, followed by the maximum number of concurrent sessions allowed, which is configurable. The default maximum is

	60000, which is also the upper limit of the value.
MAC Bind IP	Strict – Ensure that both the MAC address and the IP address of the source and/or destination clients. Non-Strict – Do not check the IP address when processing IP Objects that specify MAC addresses.
Quality of Service	Choose one of the QoS rules to be applied as firewall rule. For detailed information of setting QoS, please refer to the related section later.
User Management	This setting is only available when Rule-Based is selected in User Management>>General Setup. The default firewall rule will be applied to the selected user or user group. Refer to the chapter on User Management for more details on the feature. ● None: User Management does not apply to the default rule. ● User Object: The default rule only applies to the selected user. ● [Create New User]: Select this to create a new user. ● User Group: The default rule only applies to the selected User Group. ● [Create New Group]: Select this to create a new user group. ● ALL: The default rule applies to all defined users. ● Create New User or Create New Group item will appear for you to click to create a new one if there is no user profile or group profile existed. Syslog - Select to allow User Management to log messages in Syslog.
APP Enforcement	Select an APP Enforcement profile for application blocking, or None to disable APP Enforcement for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on APP Enforcement for more details on the feature. Syslog - Select to allow APP Enforcement to log messages in Syslog.
URL Content Filter	Select a URL Content Filter profile to be used, or None to disable URL Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Refer to the chapter on URL Content Filter for more details on the feature. Syslog - Select to allow URL Content Filter to log messages in Syslog. Logging action is configured at the profile level in CSM>>URL Content Filter Profile, Log.
Web Content Filter	Select a Web Content Filter profile to be used, or None to disable Web Content Filter for the Default Rule. Select [Create New] from the dropdown list to create a new profile. Syslog - Select to allow Web Content Filter to log messages in Syslog. Logging action is configured at the profile level in the Web Content Filter Profile Table section in CSM>>Web Content Filter Profile, Log.
DNS Filter	Select the DNS Filter profile to be used, or None to disable DNS Filter for the Default Rule. Select [Create New] from

	the dropdown list to create a new profile. Syslog - Select to allow DNS Filter to log messages in Syslog. Logging action is configured at the profile level in the DNS Filter Profile Table section in CSM>>DNS Filter Profile, SysLog.
Advance Setting	Click Edit to open the configuration window for Advanced Settings. However, it is recommended to use the default settings.  Codepage - Sets the codepage used by the URL content filter to match URLs against keywords in profiles. Choosing the appropriate codepage can increase the accuracy of the URL Content Filter. The default value is ANSI 1252 Latin I. If the setting is None, no decoding of URL will be performed. If you are unsure of which codepage to use, please start the Syslog application, and the recommended codepage will be shown in the Codepage Information tab in the Setup dialog box.  Window size - Sets the TCP window size as described in RFC 1323. Valid values are from 0 to 65535. The more the value is, the better the performance will be. However, if the network is not stable, small value will be proper. Session timeout - Sets the timeout sessions are allowed to idle before they are removed from the system. DrayTek Banner - Select to display the following screen for web pages that are blocked by the Firewall. The default setting is Enabled.

	The requested Web page has been blocked by Web Content Filter. Please contact your system administrator for further information. [Powered by Draytek] Strict Security Checking APP Enforcement – If this option is selected, when the router cannot identify the application that generated the outbound traffic due to limited system resources, the session will be blocked; if this option is not selected, the session will be allowed.

3. When you finish the configuration, please click **OK** to save and exit this page.

IV-1-3 Defense Setup

As a sub-functionality of IP Filter/Firewall, there are 15 types of detect/ defense function in the **DoS Defense** setup. The DoS Defense functionality is disabled for default.

IV-1-3-1 DoS Defense

To configure DoS Defense, select DoS Defense under the Firewall menu item on the Web UI menu bar.

Firewall >> Defense Setup

DoS Defense

Spoofing Defense

DoS defense

☐ Enable DoS Defense

Select All

☐ Block Smurf

☐ Block Ping of Death

☐ Block trace route

☐ Block ICMP fragment

☐ Block SYN fragment

☐ Block Unassigned Numbers

☐ Block Fraggle Attack

OK

Clear All

Cancel

Available settings are explained as follows:

Item	Description
Enable Dos Defense	Select to enable DoS Defense. Select All - Click to select all DoS Defense options. White/Black List Option - Set white/black list of IPv4/IPv6 address.
Enable SYN flood defense	Select to enable SYN flood defense. When the arrival rate of SYN packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. This is to prevent TCP SYN packets from exhausting router resources. The default values of threshold and timeout are 2000 packets per second and 10 seconds, respectively.
Enable UDP flood defense	Select to enable UDP flood defense. When the arrival rate of UDP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. The default values of threshold and timeout are 2000

	packets per second and 10 seconds, respectively.
Enable ICMP flood defense	Select to enable ICMP flood defense. When the arrival rate of ICMP packets exceeds the Threshold value, the router will start to randomly discard TCP SYN packets for a period of time as defined in Timeout. The default values of threshold and timeout are 250 packets per second and 10 seconds, respectively.
Enable Port Scan detection	Select to enable Port Scan detection. Port Scans attack your network by sending packets to a range of ports in an attempt to find services that would respond. When Port Scan detection is enabled, the router sends warning messages when it detects port scanning activities that exceed the Threshold rate. The default threshold is 2000 packets per second.
Block IP options	Select to enable Block IP options. The Vigor router will ignore IP packets with IP option field set in the datagram header. IP options are rarely used and could be abused by attackers as they carry information about the private network otherwise not available to the external network, such as security, TCC (closed user group) parameters, a series of Internet addresses, routing messages, etc, which external eavesdroppers can use to discover details about the private network.
Block Land	Select to Block LAND attacks. LAND attacks happen when an attacker sends spoofed SYN packets with both source and destination addresses set to that of the target system, which causes the target to reply to itself continuously.
Block Smurf	Select to Block Smurf attacks. The router will ignore any broadcasting ICMP echo request.
Block trace route	Select to Block traceroutes. The router will not forward traceroute packets.
Block SYN fragment	Select to Block SYN packet fragments. The router will drop any packets having both the SYN and more-fragments bits set.
Block Fraggle Attack	Select to Block Fraggle Attacks. Broadcast UDP packets received from the Internet are blocked. Activating this feature might block some legitimate packets. Since all broadcast UDP packets coming from the Internet are blocked, RIP packets from the Internet could also be dropped.
Block TCP flag scan	Select to Block TCP Flag Scans. TCP packets with abnormal flag settings will be dropped. TCP flag scanning activities that are blocked include no flag scan, FIN without ACK scan, SYN FIN scan, Xmas scan and full Xmas scan.
Block Tear Drop	Select to Block Tear Drop attacks. Some clients may crash when they receive ICMP datagrams (packets) that exceed the maximum length. The router discards any fragmented ICMP packets having lengths greater than 1024 octets.
Block Ping of Death	Select to Block Ping of Death, where fragmented ping packets are sent to target hosts so that those hosts could crash as they reassemble the malformed ping packets.
Block ICMP Fragment	Select to Block ICMP Fragments. ICMP packets with the more-fragments bit set are dropped.

Block Unassigned Numbers

Select to Block Unassigned Protocol Numbers, and the router will block packets having unassigned protocol numbers. Individual IP packet has a protocol field in the datagram header to indicate the protocol type running over the upper layer. However, the protocol types greater than 100 are reserved and undefined at this time. Therefore, the router should have ability to detect and reject this kind of packets.

Warning Messages

We provide Syslog function for user to retrieve message from Vigor router. The user, as a Syslog Server, shall receive the report sending from Vigor router which is a Syslog Client.

All the warning messages related to **DoS Defense** will be sent to user and user can review it through Syslog daemon. Look for the keyword **DoS** in the message, followed by a name to indicate what kind of attacks is detected.

IV-1-4 Diagnose

The purpose of this function is to test when the router receiving incoming packet, which firewall rule will be applied to that packet. The test result, including firewall rule profile, IP address translation in packet transmission, state of the firewall functions and etc., also will be shown on this page.

Info

The result obtained by using Diagnose is offered for RD debug. It will be different according to actual state such as network connection, LAN/WAN settings and so on.

Firewall >> Diagnose

Mode

☒ ICMP ☐ UDP ☐ TCP

Direction

Test View

Packet & Payload

Packet	Enable	Direction	Protocol
1	☒	A->B	ICMP:Customize
2	☐	A->B	ICMP:Customize

Note:

This is firewall live test which need setup WAN and plug cable in.

Analyze

Available settings are explained as follows:

Item	Description
Mode	To have a firewall rule test, specify the service type (ICMP, UDP, TCP) of the packet and type of the IP address (IPv4/IPv6).
Direction	Set the way (from WAN or from LAN) that Vigor router receives the first packet for test. Different way means the firewall will process the connection initiated from LAN or from WAN.
Test View	This is a dynamic display page. According to the direction specified, test view will display the figure to guide you typing IP address, port number, and MAC address. Later, after clicking the Analyze button, the information for the firewall rule profile and address translation will be shown on this page.
Src IP	Enter the IPv4/IPv6 address of the packet's source.
Src Port	Enter the port number of the packet's source.
Src MAC	Enter the MAC address of the packet's source.
Dst IP	Enter the IPv4/IPv6 address of the packet's destination.

Dst Port	Enter the port number of the packet's destination.
Packet & Payload	In firewall diagnose, two packets belong to one connection. In general, two packets are enough for Vigor router to perform this test. Enable – Check the box to send out the test packet. Direction – The first packet of the firewall test will follow the direction specified above. However, the direction for the second packet might be different. Simply choose the direction (from Computer A to B or from the B to A) for the second packet. Protocol – It displays the mode selected above and the state. If required, click the mode link to configure advanced setting. The common service type (Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http(GET) related to that mode (ICMP / UDP / TCP) will be shown on the following dialog box.  ● Type – Choose Customize, Ping, Trace Route / Customize, DNS, Trace Route / Customize, Http (GET). ● Payload – It is available when Customize is selected. Simply type 16 HEX characters which represent certain packet (e.g., DNS packet) if you want to set the data transfered with protocol (ICMP/UDP/TCP) which is different to Type setting.
Analyze	Execute the test and analyze the result.

The following figure shows the test result after clicking **Analyze**. Processing state for the functions (MAC Filter, QoS, User management, etc.) related to the firewall will be displayed by green or red LED.

Application Notes

A-1 How to Configure Certain Computers Accessing to Internet

We can specify certain computers (e.g., 192.168.1.10 ~ 192.168.1.20) accessing to Internet through Vigor router. Others (e.g., 192.168.1.31 and 192.168.1.32) outside the range can get the source from LAN only.

The way we can use is to set two rules under **Firewall**. For **Rule 1** of **Set 2** under **Firewall>>Filter Setup** is used as the default setting, we have to create a new rule starting from Filter Rule 2 of Set 2.

1. Access into the web user interface of Vigor router.
2. Open **Firewall>>Filter Setup**. Click the **Set 2** link, choose **Advance** Mode and choose the **Filter Rule 2** button.

Firewall >> Filter Setup

Filter Setup				Set to Factory Default
Set	Comments	Set	Comments	
1.	Default Data Filter	7.		
2.		8.		
3.		9.		
4.		10.		
5.		11.		
6.		12.		

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments : Default Call Filter

Rule	Enable	Comments	Direction	Src IP	Dst IP	Service Type	Action	CSM	Move Up	Move Down
1	☒	Block NetBios	LAN/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to any	Block Immediately			Down
2	☐		LAN/RT/VPN -> WAN	Any	Any	Any	Pass Immediately		UP	Down

3. Check the box of **Enable**. Enter the comments (e.g., **block_all**). Choose **Block If No Further Match** for the **Filter** setting. Then, click **OK**.

Filter Set 1 Rule 2

☒ Enable	block_all		
Comments			
Schedule Profile	None	None	None
☐ Clear sessions when schedule is ON			
Direction	LAN/RT/VPN -> WAN Advanced		
Source IP/Country	Any	Edit	
Destination IP/Country	Any	Edit	
Service Type	Any	Edit	
Fragments	Don't Care		
Application	Action/Profile		Syslog
Filter	Block If No Further Match		☐
Branch to Other Filter Set	None		

Info

In default, the router will check the packets starting with Set 2, Filter Rule 2 to Filter Rule 7. If Block If No Further Match for is selected for Filter, the firewall of the router would check the packets with the rules starting from Rule 3 to Rule 7. The packets not matching with the rules will be processed according to Rule 2.

- Next, set another rule. Just open **Firewall>>Filter Setup**. Click the **Set 2** link and choose the **Filter Rule 3** button.
- Check the box of **Check to enable the Filter Rule**. Enter the comments (e.g., **open_ip**). Click the **Edit** button for **Source IP**.

Filter Set 1 Rule 3

☒ Enable	open_ip		
Comments			
Schedule Profile	None	None	None
☐ Clear sessions when schedule is ON			
Direction	LAN/RT/VPN -> WAN Advanced		
Source IP/Country	Any	Edit	
Destination IP/Country	Any	Edit	
Service Type	Any	Edit	
Fragments	Don't Care		

- A dialog box will be popped up. Choose **Range Address** as **Address Type** by using the drop down list. Type 192.168.1.10 in the field of **Start IP**, and type 192.168.1.20 in the field of **End IP**. Then, click **OK** to save the settings. The computers within the range can access into the Internet.

IP Address Edit

Address Type	Range Address		
Start IP Address	192.168.1.10		
End IP Address	192.168.1.20		
Subnet Mask	255.255.255.254 / 31		
Invert Selection	☐		
IP Group	None	None	
IP Object	None	None	
IPv6 Group	None		
IPv6 Object	None	None	None
Country Object	None		

OK Close

- Now, check the content of **Source IP** is correct or not. The action for **Filter** shall be set with **Pass Immediately**. Then, click **OK** to save the settings.

Firewall >> Edit Filter Set >> Edit Filter Rule

Filter Set 1 Rule 3

☒ Enable
Comments: open_ip
Schedule Profile: None, None, None, None
☐ Clear sessions when schedule is ON

Direction: LAN/RT/VPN -> WAN [Advanced]
Source IP/Country: 192.168.1.10~192.168.1.20 [Edit]
Destination IP/Country: Any [Edit]
Service Type: Any [Edit]
Fragments: Don't Care

Application: Action/Profile
Filter: Pass Immediately
Branch to Other Filter Set: None
Syslog: ☐

- Both filter rules have been created. Click **OK**.

Firewall >> Filter Setup >> Edit Filter Set

Filter Set 1

Comments: Default Call Filter

Rule	Enable	Comments	Direction	Src IP	Dst IP	Service Type	Action	CS
1	☒	Block NetBios	LAN/RT/VPN -> WAN	Any	Any	TCP/UDP, Port: from 137~139 to any	Block Immediately	
2	☒	block_all	LAN/RT/VPN -> WAN	Any	Any	Any	Block If No Further Match	
3	☒	open_ip	LAN/RT/VPN -> WAN	192.168.1.10 ~ 192.168.1.20	Any	Any	Pass Immediately	
4	☐		LAN/RT/VPN -> WAN	Any	Any	Any	Pass Immediately	

Now, all the settings are configured well. Only the computers with the IP addresses within 192.168.1.10 ~ 192.168.1.20 can access to Internet.

IV-2 Central Security Management (CSM)

Content Security Management (CSM) allows the network administrator to restrict Internet traffic based on the content type, thus ensuring appropriate use of network resources and also reducing the likelihood of threats from malicious network content.

APP Enforcement Filter

The APP Enforcement Filter can be used to prevent users from using undesirable or inappropriate network applications such as online chat and peer-to-peer programs. The filter works by detecting and blocking network traffic of applications by means of traffic patterns.

URL Content Filter

The URL Content Filter scans URL strings in HTTP requests for predefined keywords to restrict browsing activities.

Web Content Filter

Users can also be prevented from browsing certain types of websites by using the Web Content Filter. This filter classifies website domain names into different categories, which can be selectively blocked.

Filter profiles must first be created before these CSM Filters can be enabled. Once profiles have been configured, they can be applied to the Default Rule under Firewall>>General Setup, or Filter Rules in Filter Sets under Firewall>>Filter Setup.

Info

The priority of URL Content Filter is higher than Web Content Filter.

Web User Interface

IV-2-1 APP Enforcement Profile

Up to 32 policy profiles for APP Enforcement can be configured.

CSM >> APP Enforcement Profile

APP Enforcement Profile Table:

[Set to Factory Default](#)

Profile	Name	Profile	Name
1.		17.	
2.		18.

2.		6.	
3.		7.	
4.		8.	

Note:

To make URL Content Filter profile effective, please go to [Firewall >> Filter Setup](#) page to create a firewall rule and select the desired profile.

Administration Message (Max 255 characters)

[Default Message](#)

<body><center>
<p>The requested Web page has been blocked by URL Content Filter.<p>Please contact your system administrator for further information.</center></body>

OK

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profile settings.
Profile	Index number of the profile.
Name	Name that identifies the profile.
Administration Message	The message to be displayed in the browser when access to a URL has been blocked. A custom message can be entered with HTML formatting in the text box. Default Message - Click to reset the administration message to the factory default.

To set up a profile, click the profile number under Index column to bring up the configuration page.

Profile Index: 1

Profile Name:			
Priority:	Either : URL Access Control First ▼	Log:	Block ▼
URL Access Control ☐ Enable URL Access Control ☐ Prevent web access from IP address Action: Pass ▼ Edit ☐ Exception List Edit			
Web Feature ☐ Enable Web Feature Restriction Action: Pass ▼ File Extension Profile: None ▼ ☐ Cookie ☐ Proxy ☐ Upload			
OK Clear Cancel			

Available settings are explained as follows:

Item	Description
Profile Name	Name that identifies the URL Content Filter profile. The maximum length of the Profile Name is 15 characters.
Priority	The order of evaluation of URL Access Control and Web Feature below: Both: Pass – Router will allow access only to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Pass. Both:Block – Router will block access to web resources that match conditions specified in both URL Access Control and Web Feature. The Action setting of both URL Access Control and Web Feature will be disabled and the values set to Block. Either: URL Access Control First – Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. URL Access Control is applied first, followed by Web Feature. Either: Web Feature First – Router will block or allow access to web resources that match conditions specified in either URL Access Control or Web Feature. Web Feature is applied first, followed by URL Access Control.
Log	None – No log file will be created for this profile. Pass – Only passed access attempts will be recorded in Syslog. Block – Only blocked access attempts will be recorded in Syslog. All – Both passed and blocked access attempts will be recorded in Syslog.
URL Access Control	Enable URL Access Control - Select to activate URL Access Control. Prevent web access from IP address - URLs containing IP addresses (e.g., 192.168.1.1) will be blocked. Only URLs with

	domain addresses (e.g., www.draytek.com) will be allowed. This is to prevent users from circumventing URL Access Control. Action – This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First. ● Pass – Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked. ● Block – Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed. Exception List – Specify the object profile(s) as the exception list which will be processed in an opposite manner to the action selected above. Group/Object Selections – Shows the Keyword Groups and/or Objects selected for this URL Content Filter Profile. To add or remove Keyword Groups and Objects to the selection, click the Edit button to bring up the following screen. Object/Group Edit <table border="1"> <tbody> <tr><td><u>Keyword Object</u></td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or Keyword Object</td><td>None ▼</td></tr> <tr><td>or <u>Keyword Group</u></td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> <tr><td>or Keyword Group</td><td>None ▼</td></tr> </tbody> </table> OK Close Up to 8 Keyword Objects and 8 Keyword Groups can be selected. To add, remove or modify Groups or Objects, click the Keyword Object or Keyword Group hyperlinks to bring up the Objects Setting >> Keyword Object or Objects Setting >> Keyword Group pages.	<u>Keyword Object</u>	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or Keyword Object	None ▼	or <u>Keyword Group</u>	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼	or Keyword Group	None ▼

or Keyword Group	None ▼																																		
or Keyword Group	None ▼																																		
or Keyword Group	None ▼																																		
or Keyword Group	None ▼																																		
or Keyword Group	None ▼																																		
or Keyword Group	None ▼																																		
Web Feature	Enable Restrict Web Feature - Check to enable the web feature restriction. Action - This setting is enabled only when Priority is set to Either: URL Access Control First or Either: Web Feature First. ● Pass – Allows access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is blocked. ● Block – Blocks access to web pages with URLs containing keywords that are in the selected keyword groups or objects. Access to other URLs is allowed. File Extension Profile - Choose one of the profiles that you configured in Object Setting>> File Extension Objects																																		

	previously for passing or blocking the file downloading. Cookie - Select to block cookies from Internet websites. Proxy - Select to block web proxy servers that relay HTTP traffic. Upload - Select to block HTTP uploads from the LAN to the Internet.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To clear all settings, click **Clear**.

IV-2-3 Web Content Filter Profile

Trial WCF service can be activated using the **Service Activation Wizard**.

If you wish to continue using WCF beyond the trial period, you can obtain a full WCF subscription by contacting your local DrayTek channel partner or dealer. WCF subscriptions can be activated using the **Activate** link on **CSM >> Web Content Filter Profile** (described in this section) or **System Maintenance**.

From the main menu, click **CSM**, followed by **Web Content Filter Profile** to load the profile configuration page.

Info 1

Web Content Filter (WCF) is not a built-in service of Vigor router but a service powered by Commtouch. If you want to use such service (trial or formal edition), you have to perform the procedure of activation first. For the service of formal edition, please contact with your dealer/distributor for detailed information.

Info 2

Commtouch is merged by Cyren, and GlobalView services will be continued to deliver powerful cloud-based information security solutions! Refer to: <http://www.prnewswire.com/news-releases/commtouch-is-now-cyren-239025151.html>

[Default Message](#)

<body><center>

<p>The requested Web page
 from %SIP%
to %URL%
that is categorized with %CL%
has been blocked by %RNAME% Web Content Filter.<p>Please contact your system administrator for further information.</center></body>

Legend:

%SIP% - Source IP , %DIP% - Destination IP , %URL% - URL
%CL% - Category , %RNAME% - Router Name

OK

Available settings are explained as follows:

Item	Description
Activate	Click to visit the MyVigor website to activate WCF service. You will need to log in to your MyVigor account to proceed with the activation process. If you do not already have a MyVigor account, you can create one at this time.
Setup Query Server	Specify a WCF query server by typing address of the server. Click the Find more for a list of query servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be used.
Setup Test Server	Specify a WCF test server by typing address of the server. Click the Find more for a list of test servers. When the default value auto-selected is used, the server is determined automatically by looking up the geolocation of the WAN IP address. It is recommended that the default setting auto-selected be used.
Cache	None – The router verifies every HTTP URL requested by communicating with the WCF server on the Internet. This mode provides the most precise URL matching but has the lowest performance. L1 – The router caches the HTTP URLs that have been checked against the WCF server. URLs will be looked up in the L1 cache before reaching out to the WCF server. When the cache is full, the oldest entry will be deleted to accommodate new URLs. L2 – After a URL has been checked and found to pass WCF, the source and destination IPs are cached for about 1 second in the L2 cache. This is to allow a webpage to be loaded without further verifying the same URLs against the L1 cache or the WCF server. L1+L2 Cache – The router will utilize both L1 and L2 caches.
Set to Factory Default	Clear all profile settings.
Profile	Index number of the profile.
Name	Name that identifies the profile.
Administration Message	The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box. You can embed the following variables in the message: %SIP% – The source IP address that attempted the HTTP access. %DIP% – The destination IP address to which access was attempted. %URL% – The URL of the destination website. %CL% – The category to which the URL belongs. %RNAME% – The name of the router. Default Message – Click to reset the administration message to the factory default.

Up to 8 WCF profiles can be set up. To configure a profile, click its profile number to bring up its configuration page. Filter profile settings are specific to WCF providers. If you already

have an active WCF subscription, activating a WCF subscription to a provider that is different from your current provider will clear all existing profile configuration.

Black/White List	Keyword objects and groups can be applied to the URL to override WCF category filtering. Enable – Select to enable blacklisting or whitelisting. Action – Action to take when a URL matches keyword group and object selections. Pass – Allow access to the URL. Block – Disallow access to the URL. URL Keywords – Displays selected keyword group and objects. Click the Edit button to modify keyword selections.
Groups and Categories	Select categories to be included in the filter. Action – Action to take when a URL matches keyword group and object selections. Pass – allow access to the URL. Block – disallow access to the URL. Select All – Click to select all categories within the group.

Clear All - Click to deselect all categories within the group.

To save changes on the page, click **OK**. To discard changes, click **Cancel**.

IV-2-4 DNS Filter Profile

DNS Filter blocks or allows traffic to the WAN by intercepting DNS queries, and applying UCF and WCF rules to hostnames. DNS filtering is especially useful when you wish to restrict access of protocols other than HTTP, such as HTTPS. Note that a WCF license must have already been activated before WCF rules could be used.

To configure DNS Filter Profiles, select **CSM >> Web Content Filter Profile** from the main menu.

CSM >> DNS Filter

Legend:
%SIP% - Source IP , %URL% - URL
%CL% - Category , %RNAME% - Router Name

OK

Cancel

Available settings are explained as follows:

Item	Description
DNS Filter Profile Table	DNS Filter Profiles take effect when DNS servers on the WAN are used for DNS queries. The router intercepts all outgoing DNS queries on UDP port 53 and applies WCF and UCF rules on the domain names before passing the queries to the DNS servers. IP addresses of the domains are then blocked or allowed as per applicable WCF and UCF rules. DNS Filter Profiles can be applied by selecting from Firewall filter rules. Profile - Index number of the profile. Click to bring up the configuration page for the profile entry. Name - Name that identifies the profile.
Set to Factory Default	Clear all DNS Filter profile settings.
DNS Filter Local Setting	By setting the IP address of the DNS lookup server to the router's address, the router serves as a DNS lookup proxy server. When DNS Filter Local Setting is enabled, all DNS queries sent to the router will have WCF and UCF rules applied to the hostnames, and access to the resolved IP addresses will be allowed or blocked as configured in the rules. DNS Filter - Select to enable DNS Filter Local Setting. Web Content Filter - Select a WCF profile. URL Content Filter - Select a UCF profile. Syslog - The filtering result can be recorded according to the setting selected for Syslog. ● None - No log file will be created for this profile. ● Pass - Only passed access attempts will be recorded in Syslog. ● Block - Only blocked access attempts will be recorded in Syslog. ● Both - Both passed and blocked access attempts will be recorded in Syslog. Black/White List - Specify IP address, subnet mask, IP object, or IP group as a black list or white list for DNS packets passing through or blocked by Vigor router.
Administration Message	The message to be displayed in the browser when access to a website has been blocked. A custom message can be entered with HTML formatting in the text box. You can embed the following variables in the message: ● %SIP% - The source IP address that attempted the HTTP access. ● %DIP% - The destination IP address to which access was attempted. ● %URL% - The URL of the destination website. ● %CL% - The category to which the URL belongs. ● %RNAME% - The name of the router. Default Message - Click to reset the administration message to the factory default.

To save changes on the page, click **OK**. To discard changes, click **Cancel**.

A-2 How to Block Facebook Service Accessed by the Users via Web Content Filter / URL Content Filter

There are two ways to block the facebook service, Web Content Filter and URL Content Filter.

Web Content Filter,

Benefits: Easily and quickly implement the category/website that you want to block.

Note: License is required.

URL Content Filter,

Benefits: Free, flexible for customize webpage.

Note: Manual setting (e.g., one keyword for one website.)

I. Via Web Content Filter

1. Make sure the Web Content Filter license is valid.

The screenshot shows the 'Web Content Filter Profile' configuration page in the CSM interface. It includes a 'Web Filter License' section with status 'CommTouch' and dates. Below are fields for 'Setup Query Server' and 'Setup Test Server', both set to 'auto-selected'. A 'Web Content Filter Profile Table' is displayed with columns for Profile, Name, and Profile Name. The table lists profiles 1 through 8, with profile 1 named 'Default'. There is a 'Set to Factory Default' link. An 'Administration Message' section allows for a custom message (max 255 characters) with a 'Default Message' button. A 'Legend' section defines variables like %SIP%, %DIP%, %URL%, %CL%, and %RNAME%. An 'OK' button is at the bottom.

2. Open **CSM >> Web Content Filter Profile** to create a WCF profile. Check **Social Networking** with Action, **Block**.

This screenshot shows the category selection part of the Web Content Filter Profile configuration. It features a list of categories on the left (Leisure, Business, Chatting, Computer-Internet, Other) and a grid of sub-categories on the right. The 'Social Networking' checkbox under the 'Computer-Internet' category is highlighted with a red box. Other categories like 'Streaming, Downloads' and 'Botnets' are also visible.

3. Enable this profile in **Firewall>>General Setup>>Default Rule**.

General Setup

General Setup Default Rule

Actions for default rule:	Action/Profile	Syslog
Application	Pass	☐
Filter	0 / 60000	☐
Sessions Control	None	☐
Quality of Service	None	☐
User Management	None	☐
APP Enforcement	None	☐
URL Content Filter	None	☐
Web Content Filter	1-Default	☐
DNS Filter	None	☐
Advance Setting	1-Default [Create New] Edit	

OK Cancel

Backup Firewall: Restore Firewall: 未選擇任何檔案

Note:

This will not backup the detail setting of Quality of Service and Schedule.

4. Next time when someone accesses facebook via this router, the web page would be blocked and the following message would be displayed instead.

The requested Web page
from 192.168.2.114
to www.facebook.com/
that is categorized with [Social Networking]
has been blocked by Web Content Filter.

Please contact your system administrator for further information.

[Powered by DrayTek]

II. Via URL Content Filter

A. Block the web page containing the word of "Facebook"

1. Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
2. In the field of **Contents**, please type *facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 1

Name	Facebook
Contents	facebook

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

OK Clear Cancel

3. Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.
4. Configure the settings as the following figure.

CSM >> URL Content Filter Profile

Profile Index: 1

Profile Name:	Facebook		
Priority:	Either : URL Access Control First	Log:	Block
URL Access Control			
☒ Enable URL Access Control ☐ Prevent web access from IP address			
Action:		Group/Object Selections	
Block		Facebook	Edit
☐ Exception List			Edit
Web Feature			
☐ Enable Web Feature Restriction			
Action:			
Pass	File Extension Profile:	None	☐ Cookie ☐ Proxy ☐ Upload

OK Clear Cancel

5. When you finished the above steps, click **OK**. Then, open **Firewall>>General Setup**.

- Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of **URL Content Filter**. Now, users cannot open any web page with the word “facebook” inside.

Firewall >> General Setup

General Setup

General Setup **Default Rule**

Actions for default rule:

Application	Action/Profile	Syslog
Filter	Pass	☐
Sessions Control	0 / 60000	☐

User Management	None	☐
APP Enforcement	None	☐
URL Content Filter	1-Facebook	☐
Web Content Filter	None	☐
DNS Filter	None	☐

Advance Setting

B. Disallow users to play games on Facebook

- Open **Object Settings>>Keyword Object**. Click an index number to open the setting page.
- In the field of **Contents**, please type *apps.facebook*. Configure the settings as the following figure.

Objects Setting >> Keyword Object Setup

Profile Index : 2

Name facebook-apps

Contents apps.facebook

Limit of Contents: Max 3 Words and 63 Characters.
Each word should be separated by a single space.

You can replace a character with %HEX.
Example:
Contents: backdoo%72 virus keep%20out

Result:
1. backdoor
2. virus
3. keep out

- Open **CSM>>URL Content Filter Profile**. Click an index number to open the setting page.

4. Configure the settings as the following figure.

CSM >> URL Content Filter Profile

Profile Index: 2

Profile Name:

Priority: Log:

URL Access Control

☒ Enable URL Access Control ☐ Prevent web access from IP address

Action:

☐ Exception List

Web Feature

☐ Enable Web Feature Restriction

Action: **File Extension Profile:** ☐ Cookie ☐ Proxy ☐ Upload

5. When you finished the above steps, please open **Firewall>>General Setup**.
6. Click the **Default Rule** tab. Choose the profile just configured from the drop down list in the field of URL Content Filter. Now, users cannot open any web page with the word "facebook" inside.

Firewall >> General Setup

General Setup **Default Rule**

Actions for default rule:

Application	Action/Profile	Syslog
Filter	Pass	☐
Sessions Control	0 / 60000	☐
Quality of Service	None	☐
User Management	None	☐
APP Enforcement	None	☐
URL Content Filter	2-face.apps	☐
Web Content Filter	None	☐
DNS Filter	None	☐

Advance Setting

Part V Management

System
Maintenance

Bandwidth
Management

There are several items offered for the Vigor router system setup: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade, Internal Service User List and Dashboard Control.

It is used to control the bandwidth of data transmission through configuration of Sessions Limit, Bandwidth Limit, Quality of Service (QoS) and APP QoS.

V-1 System Maintenance

For the system setup, there are several items that you have to know the way of configuration: System Status, TR-069, Administrator Password, User Password, Login Page Greeting, Configuration Backup, Syslog /Mail Alert, Time and Date, Management, Reboot System, Firmware Upgrade, Firmware Backup, Internal Service User List and Dashboard Control.

Below shows the menu items for System Maintenance.

Web User Interface

V-1-1 System Status

The **System Status** displays basic network information of Vigor router including LAN and WAN interface status. Also available is the current firmware version and firmware related information.

System Status

Model Name : Vigor2962
Firmware Version : 3.9.3
Build Date/Time : Oct 12 2020 18:13:46

LAN					
	MAC Address	IP Address	Subnet Mask	DHCP Server	DNS
LAN1	14-49-BC-0D-1F-48	192.168.1.1	255.255.255.0	Yes	8.8.8.8
IP Routed Subnet	14-49-BC-0D-1F-48	192.168.0.1	255.255.255.0	Yes	8.8.8.8

WAN					
	Link Status	MAC Address	Connection	IP Address	Default Gateway
WAN1	Disconnected	14-49-BC-0D-1F-49	DHCP Client	---	---
WAN2	Disconnected	14-49-BC-0D-1F-4A	DHCP Client	---	---

IPv6		
	Address	Scope Internet Access Mode
LAN	FE80::1649:BCFF:FE0D:1F48/64	Link ---

User Mode is **OFF** now.

Available settings are explained as follows:

Item	Description
Model Name	Displays the model name of the router.
Firmware Version	Displays the firmware version of the router.
Build Date/Time	Displays the date and time of the current firmware build.
LAN	MAC Address - Displays the MAC address of the LAN Interface. IP Address - Displays the IP address of the LAN interface. Subnet Mask - Displays the subnet mask address of the LAN interface. DHCP Server - Displays the current status of DHCP server of the LAN interface. DNS - Displays the assigned IP address of the primary DNS.
WAN	Link Status - Displays current connection status of the WAN interface. MAC Address - Displays the MAC address of the WAN Interface. Connection

	- Displays the connection type of the WAN interface.. IP Address - Displays the IP address of the WAN interface. Default Gateway - Displays the assigned IP address of the default gateway.
IPv6	Address - Displays the IPv6 address for LAN. Scope - Displays the scope of IPv6 address. For example, IPv6 Link Local is non-routable and can only be used for local connections. Internet Access Mode - Displays the connection mode of the WAN interface.

V-1-2 TR-069

This device supports the TR-069 standard for remote management of customer-premises equipment (CPE) through an Auto Configuration Server, such as VigorACS.

System Maintenance >> TR-069 Setting

ACS and CPE Settings	Reporting Configuration	Export Parameters
TR-069 ☒ Disable ☐ Enable		
ACS Server On Internet		
Note: For LAN interface ,only support LAN1 ~ LAN16.		
ACS Server		
URL Wizard		
☐ Acquire URL from DHCP option 43		
Username Max: 31 characters		
Password Max: 31 characters		
Test With Inform Event Code PERIODIC		
Last Inform Response Time (NA)		
CPE Client		
Protocol ☒ HTTP ☐ HTTPS		
URL		
Port 8069		
Username vigor		
Password *****		
Note: Please enable TR-069 server to allow access from Internet on System Maintenance >> Management page.		

Periodic Inform Settings	
☐ Enable ☒ Disable	
Time Interval	900 second(s)

STUN Settings	
☐ Enable ☒ Disable	
Server Address	
Server STUN Port	3478
Minimum Keep Alive Period	60 second(s)
Maximum Keep Alive Period	-1 second(s)

Apply Settings to APs	
☐ Enable ☒ Disable	
AP Password	
☐ Specify STUN Settings for APs	

Available settings are explained as follows:

Item	Description
TR-069	Enables or disables TR-069 functionality.
ACS Server On	Choose the interface for connecting the router to the Auto Configuration Server.
ACS Server	This section specifies the settings of the ACS Server. URL - Enter the URL for connecting to the ACS. Please refer to the Auto Configuration Server user's manual for detailed information. ● Wizard - Click it to enter the IP address of VigorACS server, port number and the handler. ● Acquire URL form DHCP option 43 - Select to acquire the ACS URL from DHCP option 43. Username/Password - Enter the credentials required to connect to the ACS server. ● Test With Inform - Click to send an inform message using the selected Event Code to test if the CPE is able to communicate with the VigorACS server. ● Event Code - Select an event for the inform test. Last Inform Response Time - Displays the time of the most recent Inform Response message received from the VigorACS.
CPE Client	This section specifies the settings of the CPE Client. Http / Https - Select Https if the connection is encrypted; otherwise select Http. Port - In the event of port conflicts, change the port number of the CPE. Username and Password - Enter the username and password that the VigorACS will use to connect to the CPE.
Periodic Inform Settings	Enable - The default setting is Enable, which means the CPE Client will periodically connect to the ACS Server to update its connection parameters at intervals specified in the Interval Time field. ● Time Interval - Set interval time or schedule time for the router to send notification to CPE. Disable - Select Disable to turn off periodic notifications.
STUN Settings	STUN allows the ACS Server to connect to the CPE Client even when the client is behind a network address translator (NAT). Disable - The default setting is Disable. Enable - Please Enter the relational settings listed below: ● Server Address - Enter the IP address of the STUN server. ● Server Port - Enter the port number of the STUN server. ● Minimum Keep Alive Period - If STUN is enabled, the CPE must periodically transmit binding requests to the server for the purpose of maintaining the binding with the Gateway. Enter the minimum interval between keep-alive messages that the CPE client sends to the ACS server. The default setting is 60 seconds. ● Maximum Keep Alive Period - If STUN is enabled, the CPE must send binding request to the server for the

	purpose of maintaining the binding with the Gateway. Enter the maximum interval between keep-alive messages that the CPE client sends to the ACS server. A value of -1 indicates that no maximum period is specified.
Apply Settings to APs	This feature is able to apply TR-069 settings (including STUN and ACS server settings) to all of APs managed by Vigor2962 at the same time. Disable – TR-069 and Related settings will not be applied to VigorAPs. Enable – TR-069 settings will be applied to VigorAPs after clicking OK. The VigorAP password must be specified. ● AP Password – Enter the password of the VigorAP that you want to apply Vigor2962's TR-069 settings. Specify STUN Settings for APs – After clicking the Enable radio button for Apply Settings to APs, if you want to apply specific STUN settings (i.e., different from the Vigor2962 STUN settings) to VigorAPs to meet specific requirements, check this box and enter the server IP address, server port, and minimum and maximum keep alive periods respectively.

Select **OK** to save changes on the page, or **Clear** to reset all settings to factory defaults.

V-1-3 Administrator Password

This page allows you to set or change the administrator password.

System Maintenance >> Administrator Password Setup

Administrator Password

Old Password	Max: 83 characters		
New Password	Max: 83 characters		
Confirm Password	Max: 83 characters		
☒ Enable 'admin' account login to Web UI from the Internet			
☐ Use only advanced authentication method for Admin "WAN" login			
☒ Mobile one-Time Passwords(mOTP)			
PIN Code		Secret	
*****		*****	
☐ 2-Step Authentication			
Send Auth code via			
☐ SMS Profile	1 - ???	Recipient Number	
☐ Mail Profile	1 - ???	Mail Address	

Note:

Password can contain only a-z A-Z 0-9 , ; . " < > * + = | ? @ # ^ ! ()

Administrator Local User

☐ Enable Local User			
☐ Use only advanced authentication method for Admin "WAN" login			
Local User List			
Index	User Name	Type	Destination
Specific User			
User Name: Max: 15 characters			
Authentication method:			
Basic -			
☒ Local Password			
Password:		Confirm Password:	
Max: 15 characters			
Advanced -			
☐ Mobile one-Time Passwords(mOTP)			
PIN Code		Secret	
☐ 2-Step Authentication			
Password:		Confirm Password:	
Max: 19 characters			
Send Auth code via			
☐ SMS Profile	1 - ???	Recipient Number	
☐ Mail Profile	1 - ???	Mail Address	
Add Edit Delete			

Administrator LDAP Setting

☐ Enable LDAP/AD login for admin users
LDAP Server Profiles Setup

Note:

If Local User is enabled, you will need to select 'admin' group when log into Web UI.

OK

Available settings are explained as follows:

Item	Description
Administrator Password	The administrator can login web user interface of Vigor router to modify all of the settings to fit the requirements. Old Password - Enter the current password. The factory default is "admin". New Password - Enter the new password. The maximum length of the password is 23 characters. Confirm Password - Enter the new password again for confirmation. Enable 'admin' account login to Web UI from the Internet - Select to allow the administrator to log in from the Internet. This option is enabled when Administrator Local User is enabled (see below). Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. Select to require mOTP or 2-step authentication when logging in from the WAN. ● Mobile one-Time Password (mOTP) - Select to allow the use of mOTP passwords. Enter the PIN Code and Secret settings for getting one-time passwords. ● 2-Step Auth code via <u>SMS Profile</u> and/or <u>Mail Profile</u> - Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password.
Administrator Local User	Usually, the system administrator has the highest privilege to modify the settings on the web user interface of the Vigor router. However, in some cases, it might be necessary to have other users in LAN to access into the web user interface of Vigor router. This feature allows you to add more administrators who can then log in to the web interface, with the same privileges as the administrator. Enable Local User - Check the box to allow other users to administer the router. ● Use only advanced authentication method for Admin "WAN" login - Advanced authentication method can offer a more secure network connection. In general, the above basic password setting will be used for authentication if such option is disabled. Simply check the box to enable the following settings. ● Local User List - Shows all the users that are set up to administer the router. ● Specific User - Create the new user account as the local user. Then specify the authentication method (dividing into Basic and Advanced) for the user account. ➤ User Name - Enter a user name. ● Authentication method - Select from Basic or Advanced authentication methods. Basic - Static passwords will be used to authenticate users. ➤ Local Password - Enter the password for the local user. Advanced - Mobile One-time Passwords (mOTP) or

	2-step authentication will be used to authenticate users. ➤ Mobile one-Time Password (mOTP) - Select to allow the use of mOTP passwords. Enter the mOTP PIN Code and Secret that will be used to generate the one-time passwords. ➤ 2-Step Authentication via <u>SMS Profile</u> and/or <u>Mail Profile</u> - Select the SMS and/or Mail profiles and the destination SMS number and/or email address for transmitting the password. ● Add - After entering the user name and password above, click this button to create a new local user. The new user will be shown on the Local User List immediately. ● Edit - If you wish to change a user in the Local User List, select it, perform the necessary modifications, and click this button to update the user. ● Delete - If you wish to delete a user in the Local User List, select it and click this button to remove it.
Administrator LDAP Setting	Enable LDAP/AD login for admin users - Select to allow authentication using an LDAP/Active Directory Server. <u>LDAP Server Profiles Setup</u> - Click to set up the LDAP/Active Directory server.

Click **OK** to save changes on the page, and you will be directed to the login screen. Please log in with the new password.

V-1-4 User Password

This page allows you to set new password for user operation.

System Maintenance >> User Password

☒ Enable User Mode for simple web configuration

User Password

[Set to Factory Default](#)

Password	Max: 23 characters
Confirm Password	Max: 23 characters
Password Strength:	Weak Medium Strong
Strong password requirements:	
1. Have at least one upper-case letter and one lower-case letter.	
2. Including non-alphanumeric characters is a plus.	

Note:

1. Password can contain a-z A-Z 0-9 , ; : . " < > * + = | ? @ # ^ ! ()
2. Password can't be all asterisks(*). For example, '***' or '*****' is illegal, but '123**' or '**45' is OK.

OK

Available settings are explained as follows:

Item	Description
Enable User Mode for simple web configuration	Check this box to enable User Mode for web user interface with the password typed here for simple web configuration. The simple web user interface settings differ from those on the full web user interface seen when logged in using the administrator password.
Password	Enter the password. The maximum length of the password is 31 characters.
Confirm Password	Enter the password again for verification.
Password Strength	Shows the security strength of the password specified above.
Set to Factory Default	Click to return to the factory default setting.

Click **OK** to save changes on the page, and you will be directed to the login screen. Please window will appear. Please log in with the new password.

Here are the steps involved in setting up the router for User Mode Access:

1. Navigate to **System Maintenance>>User Password** in the web user interface.
2. Check the box of **Enable User Mode for simple web configuration** to enable user mode operation. Enter a new password in the Password field and click OK.

System Maintenance >> User Password

☒ Enable User Mode for simple web configuration

6. The main screen with User Mode will be shown:

Only basic settings are available in User Mode. These are a subset of the Admin Mode settings.

Info

Setting in User Mode can be configured as same as in Admin Mode.

V-1-5 Login Page Greeting

When you want to access into the web user interface of Vigor router, the system will ask you to offer username and password first. At that moment, the background of the web page is blank and no heading will be displayed on the Login window. This page allows you to specify login URL and the heading on the Login window if you have such requirement.

This section allows you to customize the login page by adding a message and/or setting the page title.

System Maintenance >> Login Page Greeting

Login Page Greeting

☐ Enable

Login Page Title

Welcome Message and Bulletin (Max 511 characters) [Preview](#) [Set to Factory Default](#) |

```
<h1><b><font color=red>Welcome Message</font></b></h1><p>This welcome message is displayed in the Login page of the router. Replace this text with your own message. </p><ol><li>The welcome message can be written in HTML so lists such as this one can be created </li><li>Other markup tags such as p, font or img can be used</li></ol>
```

Examples of Welcome Message and Bulletin:
<h1>Welcome Message</h1>
<p>Message</p>

Available settings are explained as follows:

Item	Description
Enable	Check this box to enable the login customization function.
Login Page Title	Enter a brief description (e.g., Welcome to DrayTek) which will be shown on the heading of the login dialog.
Welcome Message and Bulletin	Enter words or sentences here. It will be displayed for bulletin message. In addition, it can be displayed on the login dialog at the bottom. Note that do not enter URL redirect link here.
Preview	Click to preview the customized login window based on the settings entered on this page.
Set to Factory Default	Click to return to the factory default setting.

Below shows an example of a customized login page with the values entered in the **Login Page Title** and **Welcome Message and Bulletin** fields.

V-1-6 Configuration Backup

This function allows the backup and restoration of router settings. In addition to restoring Vigor2962's own configuration backup, it is possible to restore backups from certain DrayTek routers such as Vigor2820, Vigor2830 and Vigor2850 series on the Vigor2962.

Backing up the Configuration

Follow the steps below to backup your configuration.

1. Go to **System Maintenance >> Configuration Backup**. The following page will be shown.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restoration
Restore settings from an cfg file.
☐ This file is encrypted with password:
☒ 未選擇任何檔案

Backup
Backup current settings into an cfg file.
☒ Normal backup.
☐ Protect full file with password.

Available settings are explained as follows:

Item	Description
Restore	Restore settings from an cfg file – Click the Select File button to specify a file to be restored or click USB Storage (if a USB storage disk connected) to choose the configuration file. This file is encrypted with password – Select to specify a password. Restore – Click to initiate restoration of configuration. If the backup file is encrypted, you will be asked to enter the password.
Backup	Click it to perform the configuration backup of this router. Normal backup – Select to backup without a password. Protect full file with password– Select to encrypt the backup with a password. You will be prompted to enter the password as shown below: Backup Backup current settings into an cfg file. ☐ Normal backup. ☒ Protect full file with password. Password (Max. 23 characters allowed) Confirm Password (Max. 23 characters allowed) Note: Only 1-9, A-Z, a-z, and ,;:<>+= ?@#^!() are allowed. Backup ● Password – Enter a new password for encrypting the configuration file. ● Confirm Password – Enter the new password again for

	confirmation.
	Backup - Click to initiate the backup process.

- Click the **Backup** button, and the File Download dialog will be shown. Depending on your browser, you may be prompted to select a location to save the file, or the file may be saved in the default download location of your browser.

The configuration will download automatically to your computer as a file named **config.cfg**. The above example is using **Windows** platform for demonstrating examples. The **Mac** or **Linux** platform will appear different windows, but the backup function is still available.

Info

Configuration Backup does not include certificates stored on the router. Please back up certificates separately by going to Certificate Management >> Certificate Backup.

Restoring the Configuration

1. Go to **System Maintenance >> Configuration Backup**. The following windows will be shown.

System Maintenance >> Configuration Backup

Configuration Backup / Restoration

Restoration Restore settings from an cfg file. ☐ This file is encrypted with password: ☒ 選擇檔案 未選擇任何檔案 Restore
Backup Backup current settings into an cfg file. ☒ Normal backup. ☐ Protect full file with password. Backup

2. Click the **Choose File** button under **Restoration** to bring up the open file dialog box to select the configuration file to be uploaded and restored.
3. Click the **Restore** button and wait for few seconds.

V-1-7 Configuration Export

Configuration for Vigor router can be exported as an user-readable text-based (.exp) file which can be applied to other Vigor router.

In addition, it is possible to import an ".exp" file from other DrayTek routers onto the Vigor2962.

System Maintenance >> Configuration Export

Configuration Export / Import

Import Import settings from an exp file. ☐ This file is encrypted with password: ☒ 選擇檔案 未選擇任何檔案 Import
Export Export current settings into an exp file for different draytek models. ☐ Do not encrypt. ☒ Encrypt password fields. ☐ Protect full file with password. Export

Available settings are explained as follows:

Item	Description
Import	This file is encrypted with password - Check the box and enter a password for decrypting the configuration file (if the.exp file is encrypted). Click the Select File button to specify an exp file. Import - Click to import a configuration file. If the file is encrypted, you will need to enter the password set on the above password field.
Export	Do not encrypt - The configuration file (.exp) will be output as an fully user-readable text-based file. Encrypt password fields - The configuration file (.exp) will be output as a user-readable text-based file except for password related fields (user passwords will be encrypted). Protect full file with password - The configuration file is protected by full encryption. The password will be needed when importing the "exp" file on Vigor router. Export - Click it to export the configuration of Vigor router as a file with the extension of "exp".

V-1-8 Syslog/Mail Alert

SysLog function is provided for users to monitor router.

System Maintenance >> SysLog / Mail Alert Setup

SysLog / Mail Alert Setup

SysLog Access Setup ☒ Enable Syslog Save to: ☒ Syslog Server Router Name DrayTek Server IP/Hostname Destination Port 514 Mail Syslog ☐ Enable Enable syslog message: ☒ Firewall Log ☒ VPN Log ☒ User Access Log / Hotspot User Information ☒ WAN Log ☒ Router/DSL information	Mail Alert Setup ☒ Enable Send a test e-mail Interface Any SMTP Server SMTP Port 25 Mail To Sender Address Connection Security Plaintext ☐ Authentication Username Password Enable E-Mail Alert: ☒ DoS Attack ☒ APPE ☒ VPN LOG ☐ Debug Log

Note:

- Mail Syslog feature will send the Syslog when it is full.

OK

Clear

Available settings are explained as follows:

Item	Description
SysLog Access Setup	Enable - Select to enable the Syslog function. Syslog Save to - Check Syslog Server to save the records on Syslog.
Router Name	Shows the name of the router set in System Maintenance >> Management. This name will be used to identify the router in the Syslog entries. To set or modify the router name, click the hyperlink and you will be taken to System Maintenance >> Management where you can enter the value. Server IP Address /Hostname - Enter the IP address / hostname of the Syslog server. Destination Port - Enter the port for the Syslog server. Mail Syslog - Select to enable sending Syslog messages by email. Enable syslog message - Select the events to be recorded by syslog.
Mail Alert Setup	Enable - Select to enable the Mail Alert. Send a test e-mail - Click to send a test email message using the settings below. Interface - Specify the WAN interface for a mail passing through. SMTP Server - Enter the address of the SMTP server used to

	send email. SMTP Port - Enter the port of the SMTP server. Default setting is 25. Mail To - Enter the email address of the recipient. Return-Path - Enter the return path of the email messages. Email messages that cannot be delivered will be returned to this address. Connection Security - Select a method (Plaintext, SSL or StartTLS) to ensure the connection security. SSL means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. ● Accept using plain text if StartTLS connection failed. ● Force StartTLS. Stop if StartTLS connection failed. Authentication - Select this checkbox and enter the username and password if the SMTP server requires authentication. ● User Name - Enter the user name for authentication. ● Password - Enter the password for authentication. Enable E-mail Alert - Select the event types that will trigger email alerts.

Select **OK** to save changes on the page, or **Clear** to reset all settings to factory defaults.

To view the Syslog message, please follow the steps below:

1. On the **Syslog / Mail Alert Setup** screen, enter the monitor PC's IP address in the **Server IP Address** field.
2. Install the Router Tools from DrayTek web site. After installation, start Syslog by clicking on **Router Tools>>Syslog** in the Windows Start Menu.

3. In the Syslog application, select the router you wish to monitor. Remember to select the network adapter to be used to connect to the router under Network Information, or else Syslog traffic cannot be received from the router.

V-1-9 Time and Date

This section allows you to configure settings related to the system date and time.

System Maintenance >> Time and Date

Time Information

Current System Time	2000 Jan 5 Wed 0 : 2 : 38	Inquire Time

Time Setup

☐ Use Browser Time

☒ Use Internet Time

Time Server:

Priority:

Time Zone:

Enable Daylight Saving: ☐

Automatically Update Interval:

Send NTP Request Through:

Available settings are explained as follows:

Item	Description
Current System Time	Click Inquire Time to retrieve the current time from the time server.
Use Browser Time	Select this option to let the router set its system time using the time reported by the web browser.
Use Internet Time	Select this option to let the browser set its system time by retrieving time information from the specified network time server using the Network Time Protocol (NTP).
Time Server	Enter the address of the time server.
Priority	Select Auto or IPv6 First as the priority.
Time Zone	Select the time zone where the router is located.
Enable Daylight Saving	Check the box to enable Daylight Saving Time (DST) if it is applicable to your location. Advanced – Click to enter a custom schedule to enable DST. Daylight Saving Advanced ☒ Default Start: Last Sunday in March End: Last Sunday in October ☐ Customized: By Date Start: Month Day 00 : 00 End: Month Day 00 : 00 ☐ Customized: By Weekday Start: January First Sunday 00 : 00 End: January First Sunday 00 : 00 OK Close Use the default time setting or set user defined time for your requirement.

	Default – Uses the default DST schedule for the time zone. Date Range – Select this option if DST starts and ends on fixed dates. Yearly – Select this option if DST starts and ends on certain days of the week.
Automatically Update Interval	Select the time interval at which the router updates the system time.
Send NTP Request Through	Specify a WAN interface to send NTP request for time synchronization.

Select **OK** to save changes on the page, or **Cancel** to discard changes without saving.

V-1-10 SNMP

This section allows you to configure settings for SNMP and SNMPv3 services.

The SNMPv3 is more secure than SNMP through the use of encryption (supports AES and DES) and authentication (supports MD5 and SHA) for the management needs.

System Maintenance >> SNMP

SNMP Setup

☒ Enable SNMP Agent			
☒ Enable SNMPV1 Agent			
☒ Enable SNMPV2C Agent			
Get Community	public		
Set Community	private		
Manager Host IP(IPv4)	Index	IP	Subnet Mask
	1		255.255.255.0
	2		255.255.255.0
	3		255.255.255.0
Manager Host IP(IPv6)	Index	IPv6 Address	/ Prefix Length
	1		0
	2		0
	3		0
Trap Community	public		
Notification Host IP(IPv4)	Index	IP	
	1		
	2		
Notification Host IP(IPv6)	Index	IPv6 Address	
	1		
	2		
Trap Timeout	10		
☐ Enable SNMPV3 Agent			
USM User			
Auth Algorithm	No Auth		
Auth Password			
Privacy Algorithm	No Priv		
Privacy Password			

Available settings are explained as follows:

Item	Description
Enable SNMP Agent	Check to enable SNMP function. Then, enable SNMPV1 agent/SNMPV2C agent.

Get Community	Enter the Get Community string. The default setting is public . Devices that send requests to retrieve information using get commands must pass the correct Get Community string. The maximum allowed length is 23 characters.
Set Community	Enter the Set Community string. The default setting is private . Devices that send requests to change settings using set commands must pass the correct Set Community string. The maximum length of the text is 23 characters.
Manager Host IP (IPv4)	Enter the IPv4 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv4 LAN host is allowed to issue SNMP commands.
Manager Host IP (IPv6)	Enter the IPv6 address of hosts that are allowed to issue SNMP commands. If this field is left blank, any IPv6 LAN host is allowed to issue SNMP commands.
Trap Community	Enter the Trap Community string. The default setting is public. Devices that send unsolicited messages to the SNMP console must pass the correct Trap Community string. The maximum length of the text is 23 characters.
Notification Host IP (IPv4)	Enter the IPv4 address of hosts that are allowed to be sent SNMP traps.
Notification Host IP (IPv6)	Enter the IPv6 address of hosts that are allowed to be sent SNMP traps.
Trap Timeout	The default setting is 10 seconds.
Enable SNMPV3 Agent	Check to enable SNMPV3 function.
USM User	USM means user-based security mode. Enter the username to be used for authentication. The maximum allowed length is 23 characters.
Auth Algorithm	Choose one of the hashing methods to be used with the authentication algorithm.
Auth Password	Enter a password for authentication. The maximum allowed length is 23 characters.
Privacy Algorithm	Choose an encryption method as the privacy algorithm.
Privacy Password	Enter a password for privacy. The maximum allowed length is 23 characters.

Select **OK** to save changes on the page, or **Cancel** to discard changes without saving.

V-1-11 Management

This page allows you to manage the settings for Internet/LAN Access Control, Access List from Internet, Management Port Setup, TLS/SSL Encryption Setup, CVM Access Control and Device Management.

Management setup for IPv4 and IPv6 are on separate tab pages.

IPv4 Management Setup

System Maintenance >> Management

IPv4 Management Setup	IPv6 Management Setup	LAN Access Setup																																	
Router Name DrayTek																																			
☐ Default:Disable Auto-Logout ☐ Enable Validation Code in Internet/LAN Access

AP Management ☒ Enable AP Management ☒ Device Management ☐ Respond to external device																																			

OK

Available settings are explained as follows:

Item	Description
Router Name	Enter the router name as provided by ISP.
Default: Disable Auto-Logout	If enabled, the auto-logout function for web user interface will be disabled.

	 The web user interface will not terminate until you manually click the Logout icon.
Enable Validation Code in Internet/LAN Access	If enabled, Vigor router will require users to enter a validation code as shown in an image when they log in.
Internet Access Control	Allow management from the Internet - Enable the checkbox to allow system administrators to login from the Internet, and then select the specific services that are allowed to be remotely administered. Domain name allowed - This setting is only available if DNS filtering is enabled, applying DNS filter profile in firewall rules, or enabling DNS Filter Local Setting. The router will only allow connections to the WebUI using domain addresses configured in either DDNS profiles or this section. If DNS filtering is disabled, this setting will be disabled, and any domain address that resolves to the router's WAN IP address can be used to connect to the WebUI. Disable PING from the Internet - Select to reject all PING packets from the Internet. For increased security, this setting is enabled by default.
Access List from the Internet	The ability of system administrators to log into the router can be restricted to up to 10 specific hosts or networks. Apply Access List to PING - When this option is checked and Disable PING from the Internet is unchecked, pings originating from the Internet will be accepted only if they are from one of the IP addresses and/or subnet masks specified below. This option has no effect if Disable PING from the Internet is checked, which blocks all pings from the Internet. index in IP Object - Enter the index of a configured IP object. IP / Mask - Shows the IP address and/or subnet mask of the selected IP object.
Management Port Setup	User Define Ports - Check to specify user-defined port numbers for the Telnet, HTTP, HTTPS, FTP, TR-069 and SSH servers. Default Ports - Check to use standard port numbers for the Telnet and HTTP servers.
Brute Force Protection	Any client trying to access into Internet via Vigor router will be asked for passing through user authentication. Such feature can prevent Vigor router from attacks when a hacker tries every possible combination of letters, numbers and symbols until find out the correct combination of password. Enable brute force login protection - Select to enable

	detection of brute force login attempts. Maximum login failure - Specify the maximum number of failed login attempts before further login is blocked. Penalty period - Set the lockout time after maximum number of login attempts has been exceeded. The user will be unable to attempt to log in until the specified time has passed. Blocked IP List - Display, in a new browser window, IP addresses that are currently blocked from logging into the router.
TLS/SSL Encryption Setup	Enable SSL 3.0/1.0/1.1/1.2 - Check the box to enable SSL 3.0/1.0/1.1/1.2 encryption protocols. For improved security, the HTTPS and SSL VPN servers that are built into the router have been upgraded to TLS 1.x protocol. If you are using an old web browser (eg. IE 6.0) or an old version of the SmartVPN Client, you may need to enable SSL 3.0 to connect to the router. However, it is recommended that you instead upgrade your web browser or SmartVPN client to a version that supports TLS protocols that are far more secure than SSL.
AP Management	Enable AP Management - Check to enable the access point management function. If not, menu items related to Central Management>>AP will be hidden.
Device Management	Check to enable the device management function. Respond to external device - If selected, Vigor2962 will function as a slave device. When an external device (master device) sends packets to the Vigor2962 to attempt to manage it, the Vigor2962 will respond to the request coming from the external device which is able to manage Vigor2962.

Select **OK** to save changes on the page.

V-1-12 Self-Signed Certificate

A self-signed certificate is a *unique* identification for the device (e.g., Vigor router) which generates the certificate by itself to ensure the router security. Such self-signed certificate is signed with its own private key.

The self-signed certificate can be used for services such as SSL VPN and HTTPS. In addition, it can be created for free by using a wide variety of tools.

System Maintenance >> Self-Signed Certificate

Self-Signed Certificate Information

V-1-13 Reboot System

The Web user interface may be used to restart your router. Click **Reboot System** from **System Maintenance** to bring up the following page.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

☒ Using current configuration
☐ Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Schedule Profile : None None None None

Note:
Action and Duration Time settings will be ignored.

OKCancel

Available settings are explained as follows:

Item	Description
Reboot System	Select one of the following options, and press the Reboot Now button to reboot the router. Using current configuration - Select this option to reboot the router using the current configuration. Using factory default configuration - Select this option to reset the router's configuration to the factory defaults before rebooting.
Auto Reboot Time Schedule	Schedule Profile - Select up to 4 user-configured schedules to reboot the router on a scheduled basis.

Select **OK** to save changes on the page, or **Cancel** to discard changes without saving.

Info

When the system pops up Reboot System web page after you configure web settings, please click Reboot Now to reboot your router for ensuring normal operation and preventing unexpected errors of the router in the future.

V-1-14 Firmware Upgrade

Click **System Maintenance>> Firmware Upgrade** to upgrade firmware upgrade.

System Maintenance >> Firmware Upgrade

Firmware Version Status

Current Firmware Version: 3.9.3

Check The Latest Firmware

Web Firmware Upgrade

Select a firmware file.

選擇檔案

未選擇任何檔案

Click Upgrade to upload the file.

Upgrade

Preview

Note:

Upgrade using the ALL file will retain existing router configuration, whereas using the RST file will reset the configuration to factory defaults.

Available settings are explained as follows:

Item	Description
Firmware Version Status	Check The Latest Firmware - Click to check for updated firmware. Any available new firmware files will be displayed and you can download any one of them by clicking Download. After the file has been downloaded, click Select followed by Upgrade to perform the firmware upgrade. 
Web Firmware Upgrade	Click Browse... to select the firmware file, followed by Upgrade to start the upgrade process, or Preview to display detailed information about the selected firmware file:

V-1-15 Internal Service User List

User profiles (clients) defined and enabled in **User Management>>User Profile** will be displayed in this page.

Such page allows you to turn on or turn off security authentication service (offered by internal RADIUS and/or Local 802.1X) for each user profile without accessing into the User Management configuration page.

System Maintenance >> Internal Service User List

User Name	☐ Radius	User Name	☐ Radius
No valid User Profile			

OK Cancel

Note:

1. Only the user profiles which is enabled in User **Management >> User Profile** will be listed here.
2. If you enable RADIUS for a user profile here, it will use the default authentication methods; however, you may change its authentication methods via User **Management >> User Profile**.

Available settings are explained as follows:

Item	Description
User Name	Display the name of the existed user profile. To modify the detailed settings, simply click the user name link to access into the web page for modification.
Radius	Check the box to turn on the security authentication service offered by internal RADIUS server for the user profile. Uncheck the box to turn off security authentication service offered by internal RADIUS server for the user profile. If you check the box next to such item, all of the user profiles listed in this page will be enabled with RADIUS service enabled vice versa.

Info

For the detailed setting (such as IP address, port number) configuration of internal RADIUS, refer to Applications>>RADIUS/TACACS+.

For the detailed setting (such as IP address, port number) configuration of Local 802.1X, refer to LAN>>Wired 802.1X.

V-1-16 Dashboard Control

There are nine groups of setting information which can be displayed on Dashboard as a reference for administrator/user. Except for Front Panel and System Information, the settings information regarding to the groups listed on this page can be hidden if required.

System Maintenance >> Dashboard Control

- ☐ Front Panel
- ☐ System Information
- ☒ IPv4 LAN Information
- ☒ IPv4 Internet Access
- ☒ IPv6 Internet Access (shown when enabled)

V-2 Bandwidth Management

Sessions Limit

When LAN clients share a common public IP address by means of Network Address Translation (NAT), the router must track NAT sessions so that traffic to and from the WAN can reach the intended destinations. There is a finite number of sessions that can be tracked by the router, and by setting session limits will ensure that the router does not run out of resources. This is especially important when P2P applications are used. P2P applications, such as BitTorrent, that attempt to simultaneously establish connections to as many WAN hosts as possible.

Bandwidth Limit

Bandwidth Limit ensures LAN clients get their fair share of network bandwidth by placing restrictions on upstream and downstream network speeds.

Quality of Service (QoS)

QoS (Quality of Service) ensures that all LAN clients receive their fair share of bandwidth that is required for applications to function properly and efficiently.

Without QoS, it is possible that certain applications may consume excessive network resources that they degrade performance of more important applications, especially ones that are less tolerant of jitter (delay variation) or lost or delayed packets. Additionally, at times of network congestion, QoS is able to prioritize different types of traffic according to their predefined priority, thus ensuring traffic of higher importance gets processed first.

A typical QoS deployment consists of two components:

- Classification: Identifying low-latency or crucial applications and marking them for high-priority service level enforcement throughout the network.
- Scheduling: Prioritizing packets by assigning them to different queues and service types according to service levels.

APP QoS

APP QoS allows QoS to be applied to select protocols and applications.

Protocols and applications fall into two categories: Traceable and Untraceable. Traceable applications are those whose traffic can be 100% traced, and can be assigned a specific QoS class. Untraceable applications, on the other hand, are detected when they attempt to establish connections to remote hosts, and all traffic between the remote hosts and the local network will be placed under QoS, within the same QoS class.

Web User Interface

Bandwidth management ensures efficient allocation of network bandwidth for various applications.

To set up Bandwidth Management, from the Main Menu, select **Bandwidth Management**.

V-2-1 Sessions Limit

To configure Sessions Limit, from the **Bandwidth Management** menu, select **Sessions Limit** to open the setup page.

Bandwidth Management >> Sessions Limit

IPv4

IPv6

☐ Enable ☒ Disable

Default Max Sessions:

Limitation List

Index	Start IP	End IP	Max Sessions

Specific Limitation

Start IP: End IP:

Maximum Sessions:

Administration Message (Max 255 characters)

You have reached the maximum number of permitted Internet sessions.<p>Please close one or more applications to allow further Internet access.<p>Contact your system administrator for further information.

Time Schedule

Schedule Profile : , , ,

Note: Action and Idle Timeout settings will be ignored.

Available settings are explained as follows:

Item	Description
Enable / Disable	Enable - Select to activate session limit function. Disable - Select to deactivate session limit function. Default Max Session - The default maximum number of sessions allowed per LAN client, unless overridden by

	specifying a different number in the Limitation List.
Limitation List	Displays specific limitation entries.
Specific Limitation	Start IP - The beginning IP address for this limit entry. End IP - The ending IP address for limit entry. Max Sessions - The maximum number of NAT sessions allowed per LAN client. If no value is entered, the Default Max Sessions value is used. Add - Creates a new limit entry using the above Specific Limitation values. Edit - To edit an existing entry, select the entry from the Limitation List, make the appropriate changes in Specific Limitation, then click Edit. Delete - To delete an entry, select it from the Limitation List, then click the Delete button.
Administration Message	Message to be displayed in a web browser on the LAN client when the maximum number of NAT sessions has been reached. Default Message - Click to reset the administration message to the factory default.
Time Schedule	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN.

To save changes on the page, click **OK**.

V-2-2 Bandwidth Limit

To configure the Bandwidth Limit feature, from the **Bandwidth Management** menu, select **Bandwidth Limit** to bring up the configuration page.

Bandwidth Management >> Bandwidth Limit

[illegible]

Available settings are explained as follows:

Item	Description
Enable / Disable	Enable - Select to activate bandwidth limit function. Disable - Select to deactivate bandwidth limit function. IP Routed Subnet – Check this box to apply the bandwidth limit to the traffic via IP routed subnet. Default Limit (Per User) ● TX Limit - Default upstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000. ● RX limit - Default downstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited and 30000).

Limitation List	Displays specific limitation entries.
Add Entry By	IP Range - All the IPs within the range defined will be restricted by bandwidth limit defined by TX Limit and RX Limit below. ● Start IP - The beginning IP address for this limit entry. ● End IP - The ending IP address for limit entry. IP Object - All the IPs specified by the selected IP object or IP group will be restricted by bandwidth limit defined by TX Limit and RX Limit below. ● IP Group - Specify an IP group by using the drop down list. ● IP Object - Specify an IP object by using the drop down list. Each - The specified bandwidth is the limit per LAN client. Shared - The specified bandwidth limits are the total allowed for all LAN clients within the range of IP addresses. ● TX limit - The upstream limit. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000. ● RX limit - The downstream limit. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000. Add - Creates a new limit entry using the above Specific Limitation values. Edit - To edit an existing entry, select the entry from the Limitation List, make the appropriate changes in Specific Limitation, then click Edit. Delete - To delete an entry, select it from the Limitation List, then click the Delete button.
Auto-Adjustment	Allow user to use more bandwidth --- - Select to let the router automatically adjust the upstream and downstream limits based on available bandwidth.
Smart Bandwidth Limit	This option restricts the bandwidth of LAN clients that are not in the limitation list when the network sessions exceed a predefined threshold. Apply the below limit to ... - The number of sessions a LAN client is allowed to have before Smart Bandwidth Limit activates. ● TX limit - Upstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000. ● RX limit - Downstream speed limit for each LAN client. Unit can be either Kbps or Mbps. Value must be between 0 (unlimited) and 30000.
Time Schedule	Schedule Profile - Specify up to 4 time schedule entries to enable or disable the WAN.

V-2-3 Quality of Service

To configure **Quality of Service**, from the main menu, select **Bandwidth Management** menu, then click **Quality of Service** to bring up the configuration page.

Bandwidth Management >> Quality of Service

General Setup
[Set to Factory Default](#)

Index	Enable	Direction	Inbound/ Outbound Bandwidth		Class 1	Class 2	Class 3	Others	Status
WAN1	☐	BOTH ▾	100	Mbps ▾ / 100 Mbps ▾	25 %	25 %	25 %	25 %	Status
WAN2	☐	BOTH ▾	100	Mbps ▾ / 100 Mbps ▾	25 %	25 %	25 %	25 %	Status

Note:
QoS may not work properly if the bandwidth entered is not correct. Before enable QoS, you may run speed test (from e.g., <http://speedtest.net>) or contact your ISP for the accurate bandwidth.

Class Rule

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
Add						

Note:
The packets that don't match any class rules above will be classified into 'Others'

VoIP Prioritization

☒ Enable the First Priority for VoIP SIP/RTP:
SIP UDP Port: (Default: 5060)

Tag Outbound Traffic

Class 1	☐ Add DSCP or Precedence Value	Default ▾
Class 2	☐ Add DSCP or Precedence Value	Default ▾
Class 3	☐ Add DSCP or Precedence Value	Default ▾

Available settings are explained as follows:

Item	Description
General Setup	Index – Link of WAN interface. Enable – Check the box to enable the QoS function for WAN interface. If it is enabled, you can configure general QoS setting for each WAN interface. ● Direction – Direction of traffic to which QoS is to be applied (Inbound, Outbound, or Both). - IN - Apply QoS to incoming traffic only. - OUT - Apply QoS to outgoing traffic only. - BOTH - Apply to both incoming and outgoing traffic. ● Inbound/Outbound Bandwidth – The inbound / outbound bandwidth of the WAN. This option is not available on ADSL/VDSL WAN1 interface. ● Class 1 ~ 3 / Others – Percentage of bandwidth reserved for each class. Status – Click to bring up the Online Statistics page that shows snapshots of statistics for the given WAN interface.
Class Rule	Define and list the Class rules. Index – Displays the class number that you can edit. Enable – Displays the status of this class rule. QoS Class – Displays the QoS class level. Local Address – Displays the local IP address for the rule.

Item	Description
	Remote Address - Displays the remote IP address for the rule. DSCP - Displays the levels of the data for processing with QoS control. Service Type - Displays detailed settings for the service type. Add - Click it to create a class rule for QoS.
VoIP Prioritization	Enable the First Priority for VoIP SIP/RTP - Select to allow VoIP traffic to receive the highest priority. SIP UDP Port - Port number to be monitored for SIP traffic.
Tag Outbound Traffic	Tag the outgoing traffic with the DSCP or Precedence value. Add DSCP or Precedence Value for Class 1 to Class 3 - Check to apply the DSCP or precedence value for each class.

To save changes, click **OK**; to discard changes, click **Cancel**.

Online Statistics

Click the Status link in the General Setup section to show real-time online statistics of the WAN interface.

Bandwidth Management >> Quality of Service

General Setup for WAN Interface

Click WAN/LTE interface number link to configure the limited bandwidth ratio for QoS of the WAN interface.

Bandwidth Management >> Quality of Service >> WAN1

☐ Enable UDP Bandwidth Control
Limited_bandwidth Ratio %
☐ Outbound TCP ACK Prioritize

OK Cancel

Available settings are explained as follows:

Item	Description
Enable UDP Bandwidth Control	Select to restrict the bandwidth available to UDP traffic. The Limited_bandwidth Ratio value is the maximum percentage of bandwidth that can be used by UDP traffic. ● Limited_bandwidth Ratio - Enter a percentage value.
Outbound TCP ACK Prioritize	Select to give outbound ACK packets priority over other packets to ensure traffic is not slowed down because the remote host is waiting for ACK packets before further traffic will be sent.

Info

The rate of outbound/inbound must be smaller than the real bandwidth to ensure correct calculation of QoS. It is suggested to set the bandwidth value for inbound/outbound as 80% - 85% of physical network speed provided by ISP to maximize the QoS performance.

Add / edit a Class Rule for QoS

You can set up to 20 rules for one Class. If you want to edit an existed rule, please select the radio button of that one and click Edit to open the rule edit page for modification.

1. To add a rule, click **Add** to bring up the configuration page. To edit an existing rule, select the rule by clicking the radio button in front of the rule, and then click **Edit** to bring up the configuration page.

Bandwidth Management >> Quality of Service

General Setup													Set to Factory Default			
Index	Enable	Direction	Inbound/ Outbound Bandwidth				Class 1		Class 2		Class 3		Others	Status		
WAN1	☐	BOTH ▾	100	Mbps ▾	/	100	Mbps ▾	25	%	25	%	25	%	25	%	Status
WAN2	☐	BOTH ▾	100	Mbps ▾	/	100	Mbps ▾	25	%	25	%	25	%	25	%	Status

Note:

QoS may not work properly if the bandwidth entered is not correct. Before enable QoS, you may run speed test (from e.g., <http://speedtest.net>) or contact your ISP for the accurate bandwidth.

Class Rule

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
Add						

2. For adding a new rule, click **Add** to open the following page.

Rule 1

☒ Enable	
IP Version	☒ IPv4 ☐ IPv6
Local IP Address	Any Edit
Remote IP Address	Any Edit
DiffServ CodePoint	ANY
Service Type	---Predefined---
QoS Class	Class 1

Available settings are explained as follows:

Item	Description
Enable	Select to enable this rule.
IP Version	Protocol (IPv4 or IPv6) to which this rule applies.
Local IP Address	Click the Edit button to set the local (LAN) IP address or address range for the rule.
DiffServ CodePoint	DSCP or ToS precedence of packets to which this rule applies.
Remote IP Address	Click the Edit button to set the remote (WAN) IP address or address range for the rule.  Address Type – Type of address: Any Address, Single Address, Range Address, Subnet Address. ● Single Address - Specify IP address. ● Range Address - Specify Start IP Address and End IP Address. ● Subnet Address - Specify Start IP Address and Subnet Mask.
Service Type	Service Type to which this rule applies. Service is a predefined or user-defined type of traffic that uses certain protocols or ports. To set up a custom service, select User Defined to set the service name, the protocol, and port number.
QoS Class	Specify the QoS class (1, 2 or 3) for this rule.

3. After finishing all the settings here, please click **OK** to save the configuration.

SIP UDP Port: (Default: 5060)

Tag Outbound Traffic

Class 1	☐ Add DSCP or Precedence Value	Default ▾
Class 2	☐ Add DSCP or Precedence Value	Default ▾
Class 3	☐ Add DSCP or Precedence Value	Default ▾

OK

Cancel

Retag the Packets for Identification

Packets originating from the LAN that are destined for the WAN can have the DS flag changed to a different value by enabling Tag Packet and specifying the DSCP or IP Precedence value.

In the following illustration, outbound VoIP packets from the LAN arrive at the Vigor router with the QoS value unset. The router sets the DSCP value to AF before forwarding them to the ISP server via the WAN interface.

Class Rule

Index	Enable	Qos Class	Local Address	Remote Address	DSCP	Service Type
1	☒	Class 1	Any	Any	ANY	SIP(UDP:5060)
2	☒	Class 2	Any	Any	ANY	HTTP(TCP:80)

☐	SSH	2	QoS Class 1 (High) ▼
☐	SSL/TLS	3.0/1.2	QoS Class 1 (High) ▼
☐	TELNET		QoS Class 1 (High) ▼

Note:
Please remember to adjust Inbound/Outbound bandwidth of your network in "Quality of Service".
This will help QoS to work more efficient.

OK Cancel

Available settings are explained as follows:

Item	Description
Enable/Disable	Enables or disables the APP QoS feature.
Traceable	Traceable applications are those whose traffic can be 100% traced. All protocols under this tab can have a specific QoS class assigned. Enable - Select to enable QoS for the application. Apply to all - Select a QoS class to be applied to all protocols. You can override the QoS class for specific protocols using the Action dropdown listbox.
Untraceable	Untraceable applications are detected when they attempt to establish connections to remote hosts, and all traffic between the remote hosts and the local network will be placed under QoS, within the same QoS class. All protocols under this tab can have a specific QoS class

	assigned. Enable - Select to enable OoS for the application. Action - Select a QoS class to be applied to all applications.
Select All	Click to select all Enabled checkboxes.
Clear All	Click to deselect all Enabled checkboxes.

After changes have been made, click **OK** to save changes, or **Cancel** to discard.

V-3 Hotspot Web Portal

The Hotspot Web Portal feature allows you to set up profiles so that LAN users could either be redirected to specific URLs, or be shown messages when they first connect to the Internet through the router. Users could be required to read and agree to terms and conditions, or authenticate themselves, prior to gaining access to the Internet. Other potential uses include the serving of advertisements and promotional materials, and broadcast of public service announcements.

Web User Interface

V-3-1 Profile Setup

Select **Profile Setup** to create or modify Portal profiles. Up to 4 profiles can be created to meet different requirements according to LAN subnets, WLAN SSIDs, origin and destination IP addresses, etc.

Hotspot Web Portal >> Profile Setup

Hotspot Web Portal Profile:

Index	Enable	Comments	Login Mode	Applied Interface	
1.	☐		Click-through	None	Preview
2.	☐		Click-through	None	Preview
3.	☐		Click-through	None	Preview
4.	☐		Click-through	None	Preview

Note:

1. The router must connect to the Internet before webpage redirection will work.
2. If the LAN clients are using another DNS server on LAN, please make sure the DNS query for domain name "portal.draytek.com" will be resolved by the router.

OK

Available settings are explained as follows:

Item	Description
Index	Click the index number link to view or update the profile settings.
Enable	Check the box to enable the profile.
Comments	Shows the description of the profile.
Login Mode	Shows the login mode used by the profile. See the section <i>Login Mode</i> for details.
Applied Interface	Shows the interfaces to which this profile applies.
Preview	Click this button to preview the Hotspot Web Portal page that

	will be displayed to users.

V-3-1-1 Login Method

There are four login methods to choose from for authenticating network clients: **Skip Login**, **Click Through**, **Social Login**, **PIN Login**, and **Social or PIN Login**. Each login mode will present a different web page to users when they connect to the network.

(A) Skip Login, landing page only

This mode does not perform any authentication. The user will be redirected to the landing page. The user can then leave the landing page to visit other websites.

(B) Click-through

The following page will be shown to the users when they first attempt to access the Internet through the router. After clicking **Accept** on the page, users will be directed to the landing page (defined in Captive Portal URL) and be granted access to the Internet.

(C) Various Hotspot Login

An authentication page will appear when users attempt to access the Internet for the first time via the router. After authenticating themselves using a Facebook account, Google account, PIN code, password for RADIUS sever, they will be directed to the landing page and be granted access to the Internet.

(D) External Portal Server

External RADIUS server will authenticate the users when they attempt to access the Internet for the first time via the router.

V-3-1-2 Steps for Configuring a Web Portal Profile

Login Method

Click the index link (e.g., #1) of the selected profile to display the following page.

☐ Enable this profile

 Comments:

Portal Server

 Portal Method

- ☐ Skip Login, landing page only
- ☐ Click through
- ☒ Various Hotspot Login
- ☐ External Portal Server

 Captive Portal URL

Login Methods

 Choose Login Method

- ☐ Login with Facebook
Note : When Login with Facebook is selected, the protocol of the Captive Portal URL will be changed to HTTPS.
- ☐ Login with Google
- ☐ Receive PIN via SMS
- ☐ Receive PIN via Mail
- ☐ Login with RADIUS

Available settings are explained as follows:

Item	Description
Enable this profile	Check to enable this profile.
Comments	Enter a brief description to identify this profile.
Portal Server	
Portal Method	There are four methods to be selected as for portal server. ☐ Skip Login, landing page only ☐ Click through ☒ Various Hotspot Login ☐ External Portal Server
<i>When Skip Logging, landing page only or Click through is selected as Portal Method</i>	
Captive Portal URL	Enter the captive portal URL.
<i>When Various Hotspot Login is selected as Portal Method</i>	
Captive Portal URL	Enter the captive portal URL.
Login Methods	This setting is available when Various Hotspot Login is selected as the portal method. Choose Login Method - Select one or more desired login methods. ☒ Login with Facebook

	● Login with Google ● Receive PIN via SMS ● Receive PIN via Mail ● Login with RADIUS
Facebook (Login with Facebook)	This setting is available when Login with Facebook is selected as the login method. Facebook APP ID - Enter a valid Facebook developer app ID. If you do not already have an app ID, refer to section A-1 <i>How to create a Facebook App ID for Web Portal Authentication</i> for instructions on obtaining an APP ID. Facebook APP Secret - Enter the secret configured for the APP ID entered above. Refer to section A-1 <i>How to create a Facebook App ID for Web Portal Authentication</i> for details.
Google (Login with Google)	This setting is available when Login with Google is selected as the login method. Google App ID - Enter a valid Google app ID. If you do not already have an app ID, refer to section A-2 <i>How to create a Google App ID for Web Portal Authentication</i> for instructions on obtaining an APP ID. Google App Secret - Enter the secret configured for the APP ID entered above. Refer to section A-2 <i>How to create a Google APP ID for Web Portal Authentication</i> for details.
SMS Provider (Receive PIN via SMS)	This setting is available when Receive PIN via SMS is selected as the login method. Receiving PIN via SMS Provider - Select the SMS Provider to send PIN notifications. The SMS providers are configured in Objects Setting >> SMS / Mail Service Object.
Mail Server (Receive PIN via Mail)	This setting is available when Receive PIN via Mail is selected as the login method. Receiving PIN via Mail Server - Select the mail server to send PIN notifications. The mail servers are configured in Objects Setting >> SMS / Mail Service Object.
Radius Server (Login with RADIUS)	This setting is available when Login with RADIUS is selected as the login method. Authentication Method - Click link to configure the external RADIUS server for authenticating web portal clients. RADIUS MAC Authentication - Check Enable to activate user authentication by MAC address. MAC Address Format - Select the MAC address format that is used by the RADIUS server. RADIUS NAS-Identifier - It is an attribute of the RADIUS server, used by a client as an identification on a RADIUS server. Enter a string with less than 32 characters.
<i>When External Portal Server is selected as Portal Method</i>	
Redirection URL	Enter the URL to which the client will be redirected.
RADIUS Server	Authentication Method - To configure the RADIUS server, click the <u>External RADIUS Server</u> link and you will be presented with the configuration page. RADIUS MAC Authentication - If the RADIUS server supports

	authentication by MAC address, enable RADIUS MAC Authentication and select the MAC address format that is used by the RADIUS server. MAC Address Format - Select the MAC address format. RADIUS NAS-Identifier - It is an attribute of the RADIUS server, used by a client as an identification on a RADIUS server. Enter a string with less than 32 characters.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to save the configuration on this page and proceed to the next page.

If you have chosen **Skip Login, landing page only** or **External Portal Server** as the portal method, skip to step 4 *Whitelisting* below.

Otherwise, proceed to configure the login page by following steps 2 and 3.

2 Background

If you have selected a Login Mode that requires authentication, select a background for the login page.

Hotspot Web Portal >> Profile Setup

Choose Login Background

☒ Color Background

RADIUS Account Description	Enter the text to prompt the user to enter the username.
RADIUS Password Description	Enter the text to prompt the user to enter the password.
Login Button Description	Enter the text to be displayed on the login button.
Login Button Color	Select the color of the login button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.

And finally, the save and cancel buttons are always displayed.

Item	Description
Save and Next	Click to save the configuration on this page and proceed to the

	next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

2nd-stage Page for PIN Login

If you have selected **PIN Login** as the login method, you will also need to configure the page that is displayed to users when they request a PIN.

Hotspot Web Portal >> Profile Setup

Configure 2nd-stage Page for SMS Login

	Back Button
	PIN Code Message
	Default Country, Enter Mobile Number Description
	Send Button Description and Color
	Send Succeeded Message
Enter PIN and Submit Button	

Back Button Description	Back (Max 170 characters) Default
PIN Code Message	PIN code will be sent over via SMS.

Available settings are explained as follows:

Item	Description
Back Button Description	Enter text for the label of the hyperlink to return to the previous page.
PIN Code Message	Enter text to be displayed as the body text on the page.
Choose SMS Description	Enter text to be displayed as the body text on the SMS.
Default Country Code	Select the default country code to be displayed using the dropdown menu.
Enter Mobile Number Description	Enter message to be displayed in the mobile number textbox to prompt the user to enter the mobile number.
Choose Mail Description	Enter text to be displayed as a subject of the mail.
Enter Mail Address	Enter the mail address.

Description	
Send Button Description	Enter the label text of the send button.
Send Button Color	Select the color of the send button from the predefined color list, or select Customize Color and enter the RGB value. Click Preview to preview the selected color.
Send Succeeded Message	Enter text to be displayed to notify the user after the PIN has been sent.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

4 Whitelist Setting

In this step you can configure the whitelist settings. Users are allowed to send and receive traffic that satisfies whitelist settings.

Hotspot Web Portal >> Profile Setup

NAT Rules	Dest Domain	Dest IP	Dest Port	Source IP
Always allow outbound connections from hosts in ☐ NAT >> Port Redirection ☐ NAT >> Open Ports ☐ NAT >> DMZ				

Save and Next

Cancel

Available settings are explained as follows:

Item	Description
NAT Rules	To prevent web portal settings from conflicting with NAT rules resulting in unexpected behavior, select the NAT rules that are allowed to bypass the web portal. Hosts listed in selected NAT rules can always access the Internet without being intercepted by the web portal.
Dest Domain	Enter up to 30 destination domains that are allowed to be accessed.
Dest IP	Enter up to 30 destination IP addresses that are allowed to be accessed.
Dest Port	Enter up to 30 destination protocols and ports that are allowed through the router.
Source IP	Enter up to 30 source IP addresses that are allowed through the router.
Save and Next	Click to save the configuration on this page and proceed to the next page.
Cancel	Click to abort the configuration process and return to the profile summary page.

5 More Options

In this step you can configure advanced options for the Hotspot Web Portal.

Hotspot Web Portal >> Profile Setup

1 — 2 — 3.1 — 3.2 — 4 — 5

Login Method
Background
Login Page Setup
Whitelist Setting
More Options

Quota Management

Login Method	Quota Policy Profile	Valid Time	Device Allowed	Bandwidth Limit	Session Limit
SMS Login	1.Default ▼	0d 5h 0m	Unlimited	Unlimited	Unlimited
Email Login	1.Default ▼	0d 5h 0m	Unlimited	Unlimited	Unlimited

Note:
To modify the quota settings, please go to [Hotspot Web Portal >> Quota Management](#).

Web Portal Options

HTTPS Redirection

Captive Portal Detection

☒ Enable

When an unauthenticated client opening a HTTPS page, redirect will work but certificate errors may be shown. Disable this function to redirect only HTTP pages. HTTPS browsing will timeout without redirection and also no certificate errors.

☐ Enable

Trigger the unauthenticated client to automatically pop-up the Web Portal page when connects to Wi-Fi. This function is not available when using **Social Login** because the page may not be shown correctly due to the limitation of the OS built-in Captive Portal Detection.

Landing Page After Authentication

☒ Fixed URL

http://www.draytek.com

☐ User Requested URL

Available settings are explained as follows:

Item	Description
Quota Management	
Quota Policy Profile	Choose a policy profile to apply to web portal clients.
Web Portal Options	
HTTPS Redirection	If this option is selected, unauthenticated clients accessing HTTPS websites will be redirected to the login page, but the browser may alert the user of certificate errors. If this option is not selected, attempts to access to HTTPS website will time out without redirection.
Captive Portal Detection	If this option is selected, the web portal page is triggered automatically when an unauthenticated client tries to access the Internet. This function is not available when the Login Mode is Social Login , as the web portal page may not be shown correctly due to the limitations of the operating system's built-in Captive Portal Detection.
Landing Page After Authentication	

Fixed URL	Specifies the webpage that will be displayed after the user has successfully authenticated. The user will be redirected to the specified URL. This could be used for displaying advertisements to users, such as guests requesting wireless Internet access in a hotel.
User Requested URL	The user will be redirected to the URL they initially requested.
Bulletin Message	The message configured here will be briefly shown for a few seconds to the user. Default Message - This button is enabled when Bulletin Message is selected. Click to load the default text into the bulletin message textbox.
Force Landing Page Stay	This option is useful for mobile phone user. The mobile phone users can access into Internet by means of Wi-Fi connection. In general, when Captive Portal Detection is enabled on Vigor router, the login page will appear once the mobile phone detects the Wi-Fi signal. After entering the username and password (for authentication), the landing page will appear first on the screen of the mobile phone. Yet, some mobile phone will skip the landing page and access the Internet instead. This feature can force the landing page to stay on the screen of the mobile phone for a while. Enable - Select it to enter the period of time for keeping the landing page.
Applied Interfaces	
Subnet	The current Hotspot Web Portal profile will be in effect for the selected subnets.
WLAN	The current Hotspot Web Portal profile will be in effect for the selected WLAN SSIDs.
Finish	Click to complete the configuration.
Cancel	Click to abort the configuration process and return to the profile summary page.

V-3-2 Quota Management

The system administrator can specify bandwidth and sessions quota which is only applicable to the web portal clients.

Settings configured in Quota Management will override the policies set in **Bandwidth Management>>Bandwidth Limit** and **Bandwidth Management>>Limit**.

Hotspot Web Portal >> Quota Management

Web Portal Bandwidth and Session Limit

The settings here will apply only to the web portal clients and will override the policies set in Bandwidth Management.

☐ Bandwidth Limit

☐ Session Limit

Quota Policy Profile

Index	Name	Expired Time after First Login	Device Allowed per Account	Reconnection Time Restriction	Bandwidth Limit	Session Limit
1	Default	0d 5h 0m	Unlimited	Unlimited	Unlimited	Unlimited
Add (up to 20)						

Available settings are explained as follows:

Item	Description
Bandwidth Limit	Check the box to override the policy configured in Bandwidth Management>>Bandwidth Limit .
Session Limit	Check the box to override the policy configured in Bandwidth Management>>Session Limit .
Quota Policy Profile	Add - Create up to 20 policy profiles in such page.

To create a new quotal policy profile, click **Add** to open the followinging page.

OK

Available settings are explained as follows:

Item	Description
Profile Name	Enter a name for a new profile.
Account Validity	Set the duration for which the login is valid. Expired Time After the First Login – Sets the days, hours, and minutes. After the login has expired, Vigor router will block the client from accessing the network/Internet. Idle Timeout – When this option is selected, Vigor router will terminate the network connection if there is no activity from the user after the specified idle time has passed.
Device Control	Set the maximum number of devices that can be connected for each account, and the time restriction for the client accessing Internet via the web portal. Devices Allowed per account – Use the drop-down list to select the maximum number of devices that can be connected to the network using the same account. Reconnection Time Restriction – Blocks the account from being used to connect devices to the network in one of two ways: ● At ... Everyday – After the login expires, the account cannot be used to connect devices to the network until the set time of day. ● Hours.. min – After the login expires, the account cannot be used to connect devices to the network for a set period of time.
Bandwidth and Session Limit	Bandwidth Limit – Check the box to configure bandwidth limit for web portal client.

	● Download/Upload Limits - Set the maximum upload and download speeds. Session Limit- Check the box to configure a maximum session limit for web portal clients.

After finishing all the settings here, please click **OK** to save the configuration.

Application Notes

A-1 How to create Facebook APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

1. Register as FB Developer: Go to <https://developers.facebook.com/> and login the FB account.
2. Register the Facebook account as a Developer (If the account has been verified previously, this step can be skipped.)
3. Click **My Apps** then choose **Register as Developer**.

4. Switch to **YES** then click **Next** on pop-up window.

5. Choose **country** then type **phone number**, click **Send as Text** in Get Confirmation Code. Wait confirmation code message received then enter the **confirmation code**. Click **Register** to finish the register process.

Register as a Facebook Developer ✕

We need to verify your account to complete your registration. Your Phone number will be added to your timeline but won't be visible to your friends.

Country: Taiwan (+886) Phone number: 0912345678

Get Confirmation Code

Send as Text Send via Phone Call

Confirmation code: 625535

You can also verify your account by adding a credit card. [?]

Go Back Register

6. Add a New App. Click on **My Apps > Add a New App**. Choose **Website** platform.

7. Click **Skip and Create App ID** on first use. Type **Display Name**. Choose **Category**. Click **Create App ID**.

8. Pops up security check window, select the answer, and then click **Submit** to finish the process.

9. On Dashboard, user can get **App ID** and **App Secret**, these information will be used in Vigor Router's Web Portal Setup.

10. Add Platform on My Apps. Go to **Settings** then click **Add Platform**.

11. Choose **Website** in Select Platform window.

12. Enter the **Site URL** as <http://portal.draytek.com>. (Note: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put <http://portal.draytek.com:8080>). Enter the **Contact Email**. And click **Save Change**.

A-2 How to create Google APP for Web Portal Authentication?

The new web portal feature support social login as authentication method, and allows network administrator to authenticate LAN clients by their Google or Facebook account. This document introduces how to create Facebook APP, and generate the APP ID and APP secret that can be used in Web Portal setup.

1. Create Developer project. Go to <https://code.google.com/apis/console>, login with a Google account then click **Create project**. Type **project name** then click **Create**.

2. On Dashboard, choose **Use Google APIs**.

3. Edit Auth Consent screen. Go to **Credentials > Auth consent screen**. Enter your **email**, **product name** and other optional item then click on **Save**.

The consent screen will be shown to users whenever you request access to their private data using your client ID. It will be shown for all applications registered in this project.

You must provide an email address and product name for OAuth to work.

4. Create Client ID. Click **Credentials** and Click **Add credentials > OAuth2.0 client ID**.

Google Developers Console

API Manager

Credentials

Overview

Credentials

OAuth consent screen

Domain verification

API key

Identifies your project using a simple API key to check quota and access.
For APIs like Google Translate.

OAuth 2.0 client ID

Requests user consent so your app can access the user's data.
For APIs like Google Calendar.

Service account

Enables server-to-server, app-level authentication using robot accounts.
For use with Google Cloud APIs.

Add credentials

5. Choose **Web application** as Application Type, then enter **name**. Set **Authorized JavaScript origins** and **Authorized redirect URLs** as <http://portal.draytek.com>, and click **Create**. (Note: If you change http port in the vigor, please add http port in URLs. For example, we use 8080 as http port and we'll put <http://portal.draytek.com:8080>).
6. Get **client ID** and **client secret**. Such information will be used in Vigor Router's Web Portal Setup page.

OAuth client

Here is your client ID

321125827458-...jsv1B951u87ab1r4sua3u61sdr764g...apps.googleusercontent.com

Here is your client secret

...jsv1B951u87ab1r4sua3u61sdr764g...apps.googleusercontent.com

OK

V-4 Central Management (AP)

Vigor2962 can manage the access points supporting AP management via Central AP Management.

AP Map

AP Map is helpful to determine the best location for VigorAP in a room. A floor plan of a room is required to be uploaded first. By dragging and dropping available VigorAP icon from the list to the floor plan, the placement with the best wireless coverage will be clearly indicated through simulated signal strength

AP Maintenance

Vigor router can execute configuration backup, configuration restoration, firmware upgrade and remote reboot for the APs managed by the router. It is very convenient for the administrator to process maintenance without accessing into the web user interface of the access point.

Load Balance for AP

The parameters configured for Load Balance can help to distribute the traffic for all of the access points registered to Vigor router. Thus, the bandwidth will not be occupied by certain access points.

V-4-1 Dashboard

This page shows VigorAP's information about **Status**, **Event Log**, **Total Traffic** or **Station Number** by displaying VigorAP icon, text and histogram. Just move and click your mouse cursor on **Status**, **Event Log**, **Total Traffic** or **Station Number**. Corresponding web pages will be open immediately.

Central Management >> AP >> Dashboard

AP1-- IP:192.168.1.10 Device Name:VigorAP960C

AP1-- IP:192.168.1.10 Device Name:VigorAP960C

Note:

Only browser supporting [HTML5](#) can display dashboard correctly.

To access into the web user interface of VigorAP, simply move your mouse cursor on the VigorAP icon and click it. The system will guide you to access into the web user interface of VigorAP.

V-4-2 Status

This page displays current status (online, offline or SSID hidden, IP address, encryption, channel, version, password and etc.) of the access points managed by Vigor router. Please open **Central AP Management>>Function Support List** to check what AP Models are supported.

Central Management >> AP >> Status

Index	Device Name	IP Address	SSID	Ch.	STA List	Uptime	Ver.	Password	
 1	VigorAP960C	192.168.1.10	DrayTek-426E1E DrayTek-426E1E	11 36	0/128 0/128	0d 00:13	1.3.0	Password	

Note:

: AP Online

: AP Offline

: AP Hidden SSID

: Mesh Online

: Mesh Offline

: Mesh Hidden SSID

Maximum support 50 APs.

1. Display the overall mesh network information instead of the each AP in the mesh network.
2. When AP Devices connect via an intermediary switch, please ensure that UDP:4944 port and the HTTP port of AP Devices are not blocked so that the AP status can be retrieved.

Available settings are explained as follows:

Item	Description
Index	Click the index number link for viewing the settings summary of the access point.
Device Name	The name of the AP managed by Vigor router will be displayed here.
IP Address	Display the true IP address of the access point.
SSID	Display the SSID configured for the access point(s) connected to Vigor2962.
Ch.	Display the channel used by the access point.
STA List	Display the number of wireless clients (stations) connecting to the access point. In which, 0/64 means that up to 64 clients are allowed to connect to the access point. But, now no one connects to the access point. The number displayed on the left side means 2.4GHz; and the number displayed on the right side means 5GHz.
Uptime	Display the duration of the AP powered up.
Version	Display the firmware version used by the access point.
Password	Vigor2962 can get related information of the access point by accessing into the web user interface of the access point. This button is used to modify the logging password of the connected access point.

V-4-3 WLAN Profile

WLAN profile is used to apply to a selected access point. It is very convenient for the administrator to configure the setting for access point without opening the web user interface of the access point.

Central Management >> AP >> WLAN Profile

Set to Factory Default									
Profile	Name	Main SSID	Security	Multi-SSID	WLAN ACL	Rate Ctrl	Clone	To AP	To Local
1	Default	DrayTek-LAN-A	WPA+WPA2/PSK	Enable	None	None			
2	---	---	---	---	---	---	---	---	---
3	---	---	---	---	---	---	---	---	---
4	---	---	---	---	---	---	---	---	---
5	---	---	---	---	---	---	---	---	---

Click the number link of the selected profile to modify the content of the profile. Available settings are explained as follows:

Item	Description
Profile	There are five WLAN profiles offered to be configured. Simply click the index number link to open the modification page.
Name	Display the name of the profile. The default profile cannot be renamed.
Main SSID	Display the SSID configured by such wireless profile.
Security	Display the security mode selected by such wireless profile.
Multi-SSID	Enable means multiple SSIDs (more than one) are active. Disable means only SSID1 is active.
WLAN ACL	Display the name of the access control list.
Rate Ctrl	Display the upload and/or download transmission rate.
Clone	It can copy settings from an existing WLAN profile to another WLAN profile. First, you have to check the box of the existing profile as the original profile. Second, click Clone. The following dialog will appear.  Third, choose the profile index to accept the settings from the original profile. Forth, type a new name in the field of Renamed as. Last, click Apply to save the settings on this dialog. The new profile has been created with the settings coming from the original profile.
To AP	Click it to apply the selected wireless profile to the specified Access Point.

	 Simply choose the device you want from Existing Device field. Click >> to move the device to Selected Device field. Then, click OK. The selected WLAN profile will be applied to the selected access point immediately. Later the access point will reboot.
To Local	WLAN Profile configured in this page is specified for VigorAP connected to Vigor router. If required, these settings also can be applied to Vigor router. Select and check one of wireless profiles and click this button to apply the settings onto the WI-Fi wireless settings configured for such Vigor router.

How to edit the wireless LAN profile?

1. Select the WLAN profile (index number 1 to 5) you want to edit.
2. Click the index number link to display the following page.

Central Management >> AP >> WLAN Profile

WLAN Profile Edit

Specific APs

Note: The maximum station number of Wireless LAN (2.4GHz) will be applied to both Wireless LAN (2.4GHz) and Wireless LAN (5GHz) if the firmware version of AP900 is less than or equal to 1.1.4.1.

OK Cancel

Available settings are explained as follows:

Item	Description
AP Load Balance	It is used to determine the operation mode when the system detects overload between access points. Disable – Disable the function of AP load balance. By Station Number –The operation of load balance will be executed based on the station number configured in this page. It is used to limit the allowed number for the station connecting to the access point. The purpose is to prevent lots of stations connecting to access point at the same time and causing traffic unbalanced. Please define the required station number for WLAN (2.4GHz) and WLAN (5GHz) separately. By Traffic – The operation of load balance will executed according to the traffic configuration in this page. By Station Number or Traffic - The operation of load balance will be executed based on the station number or the traffic configuration.
Station Number Threshold	Set the number of stations as a threshold to activate AP load balance.

Traffic Threshold	Upload Limit -Use the drop down list to specify the traffic limit for uploading. Download Limit - Use the drop down list to specify the traffic limit for downloading.
Action When Threshold Exceeded	Stop accepting new connections - When the number of stations or the traffic reaches the threshold defined in this web page, Vigor router will stop any new connection asked by other access point. Dissociate existing station by longest idel time - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station which is idle for a longest time. Dissociate existing station by worst signal strength if it is less than - When the access point is overload (e.g., reaching the limit of station number or limit of network traffic), it will terminate the network connection of the client's station with the weakest signal.
Choose to Apply	Determine which AP shall be applied with the load balance. All APs - All APs shall be applied with the load balance. Specific APs - The function of load balance will be applied to the AP specified in this field.

After finishing all the settings here, please click **OK** to save the configuration.

V-5 Central Management (Switch)

Vigor router can manage lots of VigorSwitch devices connected to it. Through profile and group settings, the administrator can execute firmware/configuration backup, restore for VigorSwitch device, reboot the device or return to factory default settings of VigorSwitch at one time.

Web User Interface

V-5-1 Status

V-5-1-1 Switch Status

Uplink Device	Port	IP	MAC	Name/Description
Vigor Router	3	192.168.1.11	00:1D:AA:0C:CD:08	G2280

Note: Vigor router only temporarily records the IP address and MAC address of the client connects to the switch, record will be discarded after the client leaves the network.

Available settings are explained as follows:

Item	Description
Switch List	Displays the index number, switch name, IP address, model name and MAC address of the VigorSwitch device. Switch Name - The name link allows you to access into the web user interface of the Vigor Switch. IP - Displays the IP address of the switch. Model - Displays the model name of the switch. MAC - Displays the MAC address of the switch.
Search	Search - After specifying IP address, MAC address or name of the switch, click the Search button to find out the device and display the searching result on this page. Uplink Device - Displays the name of the server that Vigor switch connects to. Port - Indicates the port where the switch is connected to the router. This number link allows you to click to view more detailed information of the searched device.

Click the port number link (e.g., 3) to open the following page. Detailed information of the name, port number, IP address, MAC address, description, type, VLAN number, PVID value and PoE capability of the switch will be shown on this page.

Devices Connect to this port

Index	IP	MAC	Netbios Name
1	---	---	---

Note: Vigor router only temporarily records the IP address and MAC address of the client connects to the switch, record will be discarded after the client leaves the network.

In addition, this page will display the basic information (IP address, MAC address and Netbios Name) of "other" devices connected to this switch.

V-5-2 Profile

This page will show general information, such as name, group, IP address, MAC address, model and password of VigorSwitch only when it connects to Vigor2962 series. By clicking the index number link, a profile setting page for that switch will be shown. Note that each profile represents one VigorSwitch.

Central Management >> Switch >> Profile

Profile List

Index	Name	Group	IP Address	MAC Address	Model	Password	Process Status	Delete Profile
1	G2280	Default,	192.168.1.11	00:1D:AA:0C:CD:08	G2280	Password	Process Successfully	☒

Available settings are explained as follows:

Item	Description
Index	Click the number link to access into the switch profile. Note: Each connected VigorSwitch will have one setting profile. If there are many switches connected to Vigor2962, different index number will be used to represent different VigorSwitch.
Name	Display the user defined name of VigorSwitch.
Group	Display the group name of VigorSwitch(es).
IP Address	Display the IP address of VigorSwitch.
MAC Address	Display the MAC address of VigorSwitch.
Model	Display the model name of VigorSwitch.
Password	Click it to display the account information including username and password.
Delete Profile	Click the mark of "X" to delete the switch profile.

To edit profile for the selected switch:

1. Click index number link (e.g. #1) to open the following page.

Switch Profile 1

[Get Setting from External Switch](#)

General	VLAN	Port
Switch Name	G2280	
Comment		
Trap Community Name	public	
Login Password	**** Show	
IP Address	DHCP 192.168.1.11	

Note:

The router configuration will be updated when getting profile settings from external switch.

We will not copy settings of rate limit while copy configuration, because the format of rate limit are different between each model.

Available settings are explained as follows:

Item	Description
Switch Name	Type a name for the Switch. The purpose of name is used for identification. It is useful when there are many VigorSwitch (same modes) devices connecting to Vigor2962 series.
Comment	Enter the text in such field if additional explanation for the switch is required.
Trap Community Name	Enter the text in such field as trap community.
Login Password	Display the original login password for the VigorSwitch. However, if Group Password (in Central Management >>Switch>>Group) is configured with other string, then such field is not allowed to type any other password. And only the group password will be shown, instead.
IP Address	Display the dynamic IP address (of the connected switch) assigned by Vigor2962.
Save	Click it to save the settings.
Cancel	Click it to return to previous web page without saving the setting changes.
Send to Device	Click it to transfer the configuration change (e.g, login password, switch name, etc.) to the VigorSwitch immediately.

- After finished the settings, click **VLAN** tab to open following page.
Blank page due to LAN>>VLAN not configured previously:

4		Enable Port		☐		☐
5		Enable Port		☐		☐
6		Enable Port		☐		☐
7		Enable Port		☐		☐
8		Enable Port		☐		☐
9		Enable Port		☐		☐
10		Enable Port		☐		☐
11		Enable Port		☐		☐
12		Enable Port		☐		☐
13		Enable Port		☐		☐

Available settings are explained as follows:

Item	Description
Description	If required, type a brief description to explain the device connected to VigorSwitch via the LAN port.
Port Control	Disable Port – The port (e.g, Port 2 in this case) which is used to connect VigorSwitch and Vigor2962 will not be shutdown by Vigor2962 series. Other LAN ports of VigorSwitch allow to connect to any LAN device. When it is checked, after clicking Save, the network connection between that device and VigorSwitch will be terminated.

	By Schedule – Two schedule profiles can be specified here to force Vigor2962 executing specific action to VigorSwitch.
Rate Limit	Check the box for typing the ingress rate / egress rate for the selected VigorSwitch. After clicking Save , the value modified in this page will be written to VigorSwitch and enabled.

- Click **Save** to save the changes and then click **Send to Device**. Settings will be sent to VigorSwitch immediately.

Note:

- The router configuration will be updated when getting profile settings from external switch.
- Double quotation mark (") is not supported in Description columns.

V-5-3 Group

Different switches can be classified into different group(s). Specific password for a group can be defined and applied to every switch under that group.

Through the common password setting, it is not necessary for the system administrator to remember various login passwords to access into different VigorSwitch devices.

Central Management >> Switch >> Group

Index	Group Name	Member Switch
1	Default	G2280(192.168.1.10)
2		
3		
4		
5

7		
8		
9		
10		

Click any index number link to create a new switch group.

Index 1:

Group Name (max. 15 characters)

☐ Group Password

Existing Switch

IP Address	Switch Name

Member Switch

IP Address	Switch Name
192.168.1.10	G2280

Available settings are explained as follows:

Item	Description
Group Name	Type a name as the group name. Different switches can be classified within a group.
Group Password	Type a password that administrator can use to access into the managed VigorSwitch connecting to Vigor2962 series. All of the switches under the same group can be accessed into via such group password.
Existing Switch	Display all of the VigorSwitch devices connecting to Vigor2962.
Member Switch	Choose the switches you want to group and click the button ">>" to move the selected devices onto the field of Member Switch. Devices under Member Switch will be grouped under such group profile.
OK	Click it to save the configuration.
Cancel	Click it to exit the setting page without saving any change.

V-5-4 Maintenance

Such feature can execute configuration backup, restore of selected VigorSwitch device(s) or reboot the VigorSwitch devices remotely or reset the VigorSwitch devices with factory default settings, without accessing into the web user interface of VigorSwitch respectively. It is convenient for system administrator to manage VigorSwitch devices.

Central Management >> Switch >> Maintenance

Select Action

Action Type:

Config Backup

File/Path:

任何檔案

Selected Device

Device MAC Address

Device IP Address

OK

Cancel

Available settings are explained as follows:

Item	Description
Select Action	Action Type – Four actions including configuration backup, configuration restore, remote reboot and factory reset are offered by Vigor2962 to perform on VigorSwitch. File/Path – Click the button to find out the required file.
Selected Device	Use the drop down list to specify a VigorSwitch. Then the MAC address and IP address related to the device will be displayed on this area.
OK	Click it to immediately perform the action (configuration backup, configuration restore, remote reboot and factory reset) on the device(s) listed in Selected Device.
Cancel	Click it to cancel the setting changes.

V-5-5 Alert and Log

Alert and Log is helpful for the user to understand the abnormal situation occurred in VigorSwitch quickly. When the system detects an error, information of abnormal condition will be recorded to the database; or the system will send an alert to the specified device (via e-mail or SMS) to warn the user.

V-5-5-1 Alert Setup

This page is used to define the name of alert, level of alert (in color), and determine to record the data in the database, or send a notification message to the user based on the level.

Central Management >> Switch >> Alert and Log

Alert Setup

Switch and Port Setup

☒ Alert and Log

Alert Levels and Action [Set to Factory Default](#)

Index	Enable	Level Name	Color	Create Log	Send Notification	SMS/Email Service object
1	☒	No Alert max. 15 characters	No Color	No Log	No Notification	
2	☒	Minor Alert max. 15 characters		Enable	No Notification	
3	☒	Moderate Alert max. 15 characters		☒	☐	sms alert 1 - sms alert 1 - sms alert 1 - sms alert 1 -
4	☒	Major Alert max. 15 characters		☒	☐	sms alert 1 - sms alert 1 - sms alert 1 - sms alert 1 -

Available settings are explained as follows:

Item	Description
Alert and Log	Check it to enable this feature.
Alert Levels and Action	Level Name - Define names for representing the severity of alert event. The default names for index 1 to index 4 will be shown on each setting box. Index 5 to index 8 are reserved for user-defined. Color - Define the color for each level of alert. However, the color of index 1 is No color and unable to be changed. Create Log - Check the box to create log of alert. Such log will be seen on Alert Logs page. Note that No Log for index 1; and log for index 2 is enabled in default. Send Notification - If it is checked, Vigor router's system will send notification to specified phone number via SMS. SMS/Email Service Object - Choose the SMS object which

will get the SMS from Vigor router. Up to 4 objects can be selected at one time.

V-5-5-2 Switch and Port Setup

This page defines enabling switch alert and/or port alert for each switch.

Central Management >> Switch >> Alert and Log

Alert Setup	Switch and Port Setup				
Index	Switch Name	IP	Model	Switch Alert	Port Alert
1	G2280	192.168.1.11	G2280	Enable ▾	Enable ▾

OK Cancel

Available settings are explained as follows:

Item	Description
Switch Alert	Enable - Check it to enable alert mechanism for VigorSwitch.
Port Alert	Enable - Check it to enable alert mechanism for each port of VigorSwitch.

Click the Switch Name link (e.g., G2280 in this case) to get detailed settings.

Central Management >> Switch >> Alert and Log

Alert Setup	Switch and Port Setup				
Index	Switch Name	IP	Model	Switch Alert	Port Alert
1	G2280	192.168.1.11	G2280	Enable ▾	Enable ▾

[G2280](#) [Set to Factory Default](#)

Switch Alert

Incident	Level
Cold Start	Major Alert ▾
Warm Start	Major Alert ▾
Disconnect	Major Alert ▾
Reconnect	Minor Alert ▾

Port Alert

Port	Description	Device Disconnects	Device Reconnects	Schedule on/off	Shutdown En/Dis
1		No Alert ▾	No Alert ▾	No Alert ▾	No Alert ▾
2	Uplink	No Alert ▾	No Alert ▾	No Alert ▾	No Alert ▾
3		No Alert ▾	No Alert ▾	No Alert ▾	No Alert ▾

Otherwise, the router will be unable to monitor the External Device properly. Click the **Clear** button to Clear the off-line information and account information.

OK

When you finished the configuration, click **OK** to save it.

Info

Only DrayTek products can be detected by this function.

Part VI Others

Objects Settings

Define objects such as IP address, service type, keyword, file extension and others. These pre-defined objects can be applied in CSM.

USB

USB device connected on Vigor router can be regarded as a server or WAN interface. By way of Vigor router, clients on LAN can access, write and read data stored in USB storage disk with different applications.

VI-1 Objects Settings

This section allows the creation of objects and object groups from IP addresses, service types, keywords, file extensions, SMS and email recipients, and notification types. Once set up, these objects can be applied to firewall and content management rules.

Web User Interface

VI-1-1 IP Object

For IPs in a range and service ports in a limited range usually will be applied in configuring router's settings, therefore we can define them with *objects* and bind them with *groups* for using conveniently. Later, we can select that object/group for applying it. For example, all the IPs in the same department can be defined with an IP object (a range of IP address).

Up to 192 IP Objects can be created.

Objects Setting >> IP Object

Export IP Object

- ☒ Backup the current IP Objects with a CSV file
☐ Download the default CSV template to edit

Restore IP Object

未選擇任何檔案

Note:

For better compatibility, it's suggested to edit IP Objects with the provided default CSV template.

Available settings are explained as follows:

Item	Description
View	Use the drop down list to choose a type (Single Address, Range Address, Subnet Address, Mac Address or all) that IP object with the selected type will be shown on this page.
Set to Factory Default	Clear all profile settings.
Search	Enter a string of the IP object that you want to search.
Index	Profile number of the IP object.
Name	Name of the object.
Address	Displays the IP address configured for the object profile.
Export IP Object	Usually, the IP objects can be created one by one through the web page of Objects>>IP Object. However, to a user who wants to save more time in bulk creating IP objects, a quick method is offered by Vigor router to modify the IP objects with a single file, a CSV file. All of the IP objects (or the template) can be exported as a file by clicking Download. Then the user can open the CSV file through Microsoft Excel and modify all the IP objects at the same time. Backup the current IP Objects with a CSV file – Click it to backup current IP objects as a CSV file. Such file can be restored for future use. Download the default CSV template to edit – After clicking it, press Download to store the default CSM template (a table without any input data) to your hard disk. Download – Download the CSV file from Vigor router and store in your hard disk.
Restore IP Object	Select – Click it to specify a predefined CSV file. Restore – Import the selected CSV file onto Vigor router.

To set up a profile, click the profile number under Index column to bring up the configuration page.

Name	Name that identifies this profile. Maximum length is 15 characters.
Address Type	Type of Addresses. Any Address - Object covers all IPv6 addresses. Single Address - Object covers one IPv6 address. Range Address - Object covers a range of IPv6 addresses. Subnet Address - Object covers a range of IPv6 addresses specified in subnet notation. Mac Address - Object contains a MAC address.
Match Type	Specify the match type (128 Bits or Suffix 64 Bits) for the IPv6 address.
Mac Address	Enter MAC address of the network device, if Address Type is Mac Address.
Start IP Address	Enter beginning IP address, if Address Type is one of Single Address, Range Address and Subnet Address.
End IP Address	Enter ending IP address, if Address type is one of Single Address, Range Address and Subnet Address.
Prefix Length	Enter IPv6 prefix length, if Address type is Subnet Address.
Invert Selection	If selected, all addresses except the ones entered above will be used.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To blank out all settings in the IPv6 object, click **Clear**.

VI-1-4 IPv6 Group

Multiple **IPv6 Objects** can be placed into an **IPv6 Group**.

Objects Setting >> IPv6 Group

IPv6 Group Table:

[Set to Factory Default](#)

Select All	Selects all file extensions for the category.
Clear All	Deselects all file extensions for the category.

Select the file extensions you wish to be included in the profile. To save changes on the page, click **OK**. To discard changes, click **Cancel**. To blank out all settings in the current file extension object, click **Clear**.

VI-1-10 SMS/Mail Service Object

SMS Service Object

Up to 10 SMS Service Objects can be set up for use with **Application>>SMS Alert Service**.

Objects Setting >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default	
Index	Profile Name	SMS Provider		
<u>1.</u>				
<u>2.</u>				
<u>3.</u>				
<u>4.</u>				
<u>5.</u>				
<u>6.</u>				
<u>7.</u>				
<u>8.</u>				
<u>9.</u>	Custom 1			
<u>10.</u>	Custom 2			

Each item is explained as follows:

Item	Description
Set to Factory Default	Clear all profile settings.
Index	Index number of the profile.
Profile Name	Name that identifies the profile.
SMS Provider	The SMS provider selected for the profile.

To set up a profile, click the **SMS Provider** tab, and then click its index to bring up the configuration page.

Object Settings >> SMS / Mail Service Object

SMS Provider	Mail Server
Index	Profile Name
1.	

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	
Service Provider	kotsms.com.tw (TW) ▼
Username	Max: 31 characters
Password	Max: 31 characters
Quota	10
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

OK Clear Cancel

Available settings are explained as follows:

Item	Description
Profile Name	Name that identifies this profile. Maximum length is 31 characters.
Service Provider	Select a Service Provider from the dropdown list.
Username	Username used to log in to the service. Maximum length is 31 characters.
Password	Password used to log in to the service. Maximum length is 31 characters.
Quota	Remaining number of text messages allowed to be sent. The quota value reduces by 1 every time the router sends an SMS message. When the quota reaches 0, no SMS will be sent until it is reset to greater than 0.
Sending Interval	Minimum amount of time, in seconds, to wait between sending SMS messages.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To blank out all settings in the SMS service object, click **Clear**.

Customized SMS Service

The router offers an extensive list of preset SMS service providers for your convenience. However, if your service provider is not among the list of supported service providers, simply use Indexes 9 and 10 to create a customized SMS service profile.

Objects Setting >> SMS / Mail Service Object

SMS Provider	Mail Server	Set to Factory Default	
Index	Profile Name	SMS Provider	
1.			
2.			
3.			
4.			
5.			
6.			
7.			
8.			
9.	Custom 1		
10.	Custom 2		

To set up a customized profile, click the SMS Provider tab, and then click one of the 2 indexes (9 and 10) to bring up the configuration page.

Objects Setting >> SMS / Mail Service Object

Profile Index: 9

Profile Name	Custom 1
Service Provider	
Max: 255 characters	
Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser###&password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg###	
Username	Max: 31 characters
Password	Max: 31 characters
Quota	10
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

Available settings are explained as follows:

Item	Description
Profile Name	Display-only profile name, which is Custom 1 for Index 9 and Custom 2 for Index 10.
Service Provider	Enter an identifier for the service provider. Maximum length is 23 characters.
Entry box	Enter the URL for the SMS service. Maximum length is 255 characters. Contact the service provider for the appropriate

	URL to use.
Username	Username used to log in to the service. Maximum length is 31 characters.
Password	Password used to log in to the service. Maximum length is 31 characters.
Quota	Remaining number of text messages allowed to be sent. The quota value reduces by 1 every time the router sends an SMS message. When the quota reaches 0, no SMS will be sent until it is reset to greater than 0.
Sending Interval	Minimum amount of time, in seconds, to wait between sending SMS messages.

To save changes on the page, click **OK**. To discard changes, click **Cancel**. To blank out all settings in the SMS service object, click **Clear**.

Mail Service Object

Up to 10 **Mail Service Objects** can be set up for use with **Application>>SMS/Mail Alert Service**.

Objects Setting >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default	
Index		Profile Name		
1.				
2.

To set a new profile, please do the steps listed below:

1. Open **Object Setting>>Country Object**, and click the number (e.g., #1) under Index column for configuration in details.

- The configuration page will be shown as follows:

Objects Setting >> Country Object

Profile Index : 1

Name:

Available Country

- 1-Afghanistan
- 2-Aland Islands
- 3-Albania
- 4-Algeria
- 5-American Samoa
- 6-Andorra
- 7-Angola
- 8-Anguilla
- 9-Antarctica

Selected Country (Up to 16)

- 240-United Kingdom
- 241-United States

>>
<<

[Next >>](#)

Note:

The maximum number of Selected Country is 16.

Available settings are explained as follows:

Item	Description
Name	Enter a name for such profile. The maximum length of the name you can set is 15 characters.
Available Country / Selected Country	Select any country from Available Country. Click >> to move the selected country and place on Selected Country. Note that one country profile can contain 1 up to 16 countries.

- After finishing all the settings here, please click **OK** to save the configuration.

Objects Setting >> Country Object

Country Object Table:

[Set to Factory Default](#)

Index	Name	Index	Name
<u>1.</u>	Taiwan	<u>17.</u>	
<u>2.</u>		<u>18.</u>	
<u>3.</u>		<u>19.</u>	
<u>4.</u>		<u>20.</u>

<u>7.</u>		<u>23.</u>	
<u>8.</u>		<u>24.</u>	

Application Notes

A-1 How to Send a Notification to Specified Phone Number via SMS Service in WAN Disconnection

Follow the steps listed below:

1. Log into the web user interface of Vigor router.
2. Configure relational objects first. Open **Object Settings>>SMS/Mail Server Object** to get the following page.

Objects Setting >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default	
Index	Profile Name		SMS Provider	
<u>1.</u>				
<u>2.</u>				
<u>3.</u>				
<u>4.</u>				
<u>5.</u>				
<u>6.</u>				
<u>7.</u>				
<u>8.</u>				
<u>9.</u>	Custom 1			
<u>10.</u>	Custom 2			

Index 1 to Index 8 allows you to choose the built-in SMS service provider. If the SMS service provider is not on the list, you can configure Index 9 and Index 10 to add the new service provider to Vigor router.

3. Choose any index number (e.g., Index 1 in this case) to configure the SMS Provider setting. In the following page, Enter the username and password and set the quota that the router can send the message out.

Objects Setting >> SMS / Mail Service Object

Profile Index: 1

Profile Name	Local number
Service Provider	kotsms.com.tw (TW)
Username	abc5026
Password	
Quota	10
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

- After finished the settings, click **OK** to return to previous page. Now you have finished the configuration of the SMS Provider profile setting.

Objects Setting >> SMS / Mail Service Object

SMS Provider		Mail Server	Set to Factory Default
Index	Profile Name	SMS Provider	
1.	Local number	kotsms.com.tw (TW)	
2.			
3.			
4.			
5.			
6.			
7.			
8.			
9.	Custom 1		
10.	Custom 2		

- Open **Object Settings>>Notification Object** to configure the event conditions of the notification.

Object Settings >> Notification Object

			Set to Factory Default	
Index	Profile Name	Settings		
1.				
2.				
3.				
4.				
5.				
6.				
7.				
8.				

- Choose any index number (e.g., Index 1 in this case) to configure conditions for sending the SMS. In the following page, Enter the name of the profile and check the Disconnected and Reconnected boxes for WAN to work in concert with the topic of this paper.

Objects Setting >> Notification Object

Profile Index: 1

Profile Name		WAN_Notify	
Category	Status		
WAN	☒ Disconnected	☒ Reconnected	
VPN Tunnel	☐ Disconnected	☐ Reconnected	
High Availability	☐ Failover Occurred ☐ Config Sync Fail ☐ Router Unstable		

OK Clear Cancel

Note:

When High Availability is enabled, "Sending Interval" of **SMS Provider profile** should set to 0.

- After finished the settings, click **OK** to return to previous page. You have finished the configuration of the notification object profile setting.

Object Settings >> Notification Object

Set to Factory Default		
Index	Profile Name	Settings
1.	WAN_Notify	WAN
2.		
3.		
4.		
5.		
6.		
7.		
8.		

- Now, open **Application >> SMS / Mail Alert Service**. Use the drop down list to choose SMS Provider and the Notify Profile (specify the time of sending SMS). Then, Enter the phone number in the field of Recipient Number (the one who will receive the SMS).

Applications >> SMS / Mail Alert Service

SMS Alert		Mail Alert		Set to Factory Default		
Index	Enable	SMS Provider	Recipient Number	Notify Profile	Schedule(1-15)	
1	☒	1 - Local number ▼	0910222366	1 - WAN_Notify ▼	None ▼	None ▼
2	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
3	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
4	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
5	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
6	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
7	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
8	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
9	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼
10	☐	1 - Local number ▼		1 - WAN_Notify ▼	None ▼	None ▼

- Click **OK** to save the settings. Later, if one of the WAN connections fails in your router, the system will send out SMS to the phone number specified. If the router has only one WAN interface, the system will send out SMS to the phone number while reconnecting the WAN interface successfully.

Remark: How the customize the SMS Provider

Choose one of the Index numbers (9 or 10) allowing you to customize the SMS Provider. In the web page, Enter the URL string of the SMS provider and Enter the username and password. After clicking **OK**, the new added SMS provider will be added and will be available for you to specify for sending SMS out.

Objects Setting >> SMS / Mail Service Object

Profile Index: 9

Profile Name	Custom 1
Service Provider	clickatell
Max: 255 characters	
Please contact with your SMS provide to get the exact URL String eg:bulksms.vsms.net:5567/eapi/submission/send_sms/2/2.0?username=###txtUser###&password=###txtPwd###&msisdn=###txtDest###&message=###txtMsg###	
Username	test333
Password	
Quota	10
Sending Interval	3 (seconds)

Note:

1. Only one message can be sent during the "Sending Interval" time.
2. If the "Sending Interval" was set to 0, there will be no limitation.

Part VII Troubleshooting

Troubleshooting

This part will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration.

VII-1 Diagnostics

This section will guide you to solve abnormal situations if you cannot access into the Internet after installing the router and finishing the web configuration. Please follow sections below to check your basic installation status stage by stage.

- Checking if the hardware status is OK or not.
- Checking if the network connection settings on your computer are OK or not.
- Pinging the router from your computer.
- Checking if the ISP settings are OK or not.
- Backing to factory default setting if necessary.

If all above stages are done and the router still cannot run normally, it is the time for you to contact your dealer or DrayTek technical support for advanced help.

Web User Interface

This section contains utilities that can assist you in analyzing issues and failures during the setup and operation of the router.

Index	IPv6 Address	IAID	Link-layer Address	Leased Time

Available settings are explained as follows:

Item	Description
Index	Shows the index of the DHCP entry.
IP Address	Shows the IP address assigned by the router to the MAC address.
MAC Address	Shows the MAC address of this DHCP entry.
Leased Time	Shows the remaining time of the DHCP lease of the device.
HOST ID	Shows the host ID of this network device.
Refresh	Click to reload this page with the most up-to-date information.

VII-1-6 NAT Sessions Table

This screen shows the 128 newest entries in the NAT sessions table.

Click **Diagnostics** and click **NAT Sessions Table** to open the list page.

Diagnostics >> NAT Sessions Table

NAT Active Sessions Table (Limit: 128 entries)					Refresh
Private IP	:Port	#Pseudo Port	Peer IP	:Port	Interface

Available settings are explained as follows:

Item	Description
Private IP:	Shows the IP address of the LAN host.
Port #	Shows the port number used on the LAN host for this NAT session.
Pseudo Port	Shows the external port number used on the WAN interface for this NAT session.
Peer IP:	Shows the remote host's IP address.
Port	Shows the port number used on the remote host for this NAT session.
Interface	Shows the WAN interface used for this NAT session.
Refresh	Click to reload this page with the most up-to-date information.

VII-1-7 DNS Cache Table

The router can function as a DNS server which allows LAN clients to look up DNS information by sending DNS requests to the router. Such DNS information is temporarily cached on the router and can be viewed on this page.

Click **Diagnostics** and click **DNS Cache Table** to open the web page.

Diagnostics >> DNS Cache Table

IPv4 DNS Cache Table

ClearRefresh

Domain Name	IP Address	TTL(s)

IPv6 DNS Cache Table

ClearRefresh

Domain Name	IP Address	TTL(s)

Note:

The LAN DNS entry's TTL is static.

☐ When an entry's TTL is larger than 0s, this entry will be deleted from the table.

OK

Available settings are explained as follows:

Item	Description
Clear	Click to clear all cached DNS lookup entries.
Refresh	Click it to reload the page.
When an entry's TTL is larger than....	When this box is checked, DNS entries whose TTL (time to live, in seconds) exceeds the valued specified here will be deleted from the router's cache automatically. Be sure to click OK after making changes to have them saved.

VII-1-8 Ping Diagnosis

Click **Diagnostics** and click **Ping Diagnosis** to open the web page.

Diagnostics >> Ping Diagnosis

Ping Diagnosis

☒ IPV4 ☐ IPV6

Ping through: Source IP:

Ping to: IP Address:

Result | [Clear](#) |

Note:

1. If you want to ping a LAN PC or you don't want to specify which WAN to ping through, please select "Auto" in Ping Through.
2. If you select "Auto" in Source IP, we will fill Source IP according to the interface you ping through.

or

Diagnostics >> Ping Diagnosis

Ping Diagnosis

☐ IPV4 ☒ IPV6

Ping through:

Ping IPv6 Address:

Result | [Clear](#) |

Note:

1. If you want to ping a LAN PC or you don't want to specify which WAN to ping through, please select "Auto" in Ping Through.
2. If you select "Auto" in Source IP, we will fill Source IP according to the interface you ping through.

Available settings are explained as follows:

Item	Description
IPV4 /IPV6	Choose the interface for such function. Select the protocol to perform the ping operation.
Ping through	Select a WAN interface from drop down list to through which you want to perform the ping operation, or choose Auto to be let the router select the WAN interface.
Ping to	Select the type of target to which you wish to ping.

	list. The page will then be refreshed with updated information at the selected interval. 
Refresh	Click to refresh this page manually.
Index	Shows the index of the data flow.
IP Address	Shows the IP address of the monitored device.
TX rate (kbps)	Shows the transmission speed of the monitored device.
RX rate (kbps)	Shows the receiving speed of the monitored device.
Sessions	Shows the number of session that you specified on the Limit Session web page.
Action	Block - can prevent specified PC accessing into Internet within 5 minutes.  Unblock -The device with the IP address will be blocked for five minutes. The remaining time will be shown on the session column. Click it to cancel the IP address blocking. 
APP QoS	Use the drop down list to change the priority in data transmission for the specified IP address (host). 
Current /Peak/Speed	Current means current transmission rate and receiving rate for WAN interface. Peak means the highest peak value detected by the router in data transmission. Speed means line speed specified in WAN>>General Setup. If you do not specify any rate at that page, here will display Auto for instead.

VII-1-10 Port Mirror/Packet Capture

The **Port Mirror** function allows network traffic of select LAN ports to be forwarded to another LAN port for analysis. This is useful for enforcing policies, detecting unauthorized access, monitoring network performance, etc.

If selecting "Continuously Send All Packets to Mirror Port", the setting page will be shown as follows:

Diagnostics >> Port Mirror/Packet Capture

- ☒ Continuously Send All Packets to Mirror Port
☐ Download .pcap

☒ Enable ☐ Disable

	P1 WAN1	P2 WAN2	P3 LAN	P4 LAN	P5 LAN	P6 LAN
Mirror Port			☐	☐	☐	☐
Mirrored Tx Port	☐	☐	☐	☐	☐	☐
Mirrored Rx Port	☐	☐	☐	☐	☐	☐

OK

Available settings are explained as follows:

Item	Description
Continuously Send All Packets to Mirror Port	Select to send all packets to mirror port.
Enable/Disable	Select Enable to activate the function. Select Disable to cancel the function.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.
OK	Save the settings.

If selecting "Download .pcap", the setting page will be shown as follows:

Diagnostics >> Port Mirror/Packet Capture

- ☐ Continuously Send All Packets to Mirror Port
☒ Download .pcap

	P1 WAN1	P2 WAN2	P3 LAN	P4 LAN	P5 LAN	P6 LAN
Mirror Port			☐	☐	☐	☐
Mirrored Tx Port	☐	☐	☐	☐	☐	☐
Mirrored Rx Port	☐	☐	☐	☐	☐	☐

Status: Idle

Setting ☒ Capture All Packets ☐ Capture with Filter

Duration (seconds)

Available settings are explained as follows:

Item	Description
Download .pcap	If it is selected, the packets from the specified mirror port can be downloaded for analysis.
Mirror Port	One and only one port is selected as the mirror port, to which traffic is to be forwarded.
Mirrored Tx Port	Port(s) whose outbound traffic will be forwarded to the mirror port.
Mirrored Rx Port	Port(s) whose inbound traffic will be forwarded to the mirror port.
Setting	Capture All Packets - All packets will be captured for analysis. Capture with Filter - Only the packets filtered by ICMP, TCP, UDP, or TCP/UDP will be captured for analysis.
Duration	Set a period of time for Vigor router to capture the packets.
Filter Settings	It is available only when Capture with Filter is selected. Protocol - Filter the packet by using Any, ICMP, TCP, UDP, and TCP/UDP. IP Address - Filter the packet by IP address. If Customized IP is selected, please enter an IP address in the entry box. Port - It is available when TCP, UDP, or TCP/UDP is selected as the Protocol. Select Any or Customize Port. If Customize Port is selected, please enter a port number in the entry box.
Start	Click to begin the packet capturing.

	Diagnostics >> Port Mirror/Packet Capture Continuously Send All Packets to Mirror Port Download .pcap <table><thead><tr><th></th><th>P1 WAN1</th><th>P2 WAN2</th></tr></thead><tbody><tr><td>Mirror Port</td><td></td><td></td></tr><tr><td>Mirrored Tx Port</td><td>☒</td><td>☒</td></tr><tr><td>Mirrored Rx Port</td><td>☒</td><td>☒</td></tr></tbody></table> Status: Capturing Setting Capture All Packets Capture with Filter Duration 60 (seconds) Start Stop Downl		P1 WAN1	P2 WAN2	Mirror Port			Mirrored Tx Port	☒	☒	Mirrored Rx Port	☒	☒

Stop	Click to terminate the scanning job.												
Download	Click to download the packet capture result as a file with the file format,.pcap.												

After finishing all the settings here, please click **OK** to save the configuration.

VII-1-11 Traffic Graph

Click **Diagnostics** and click **Traffic Graph** to open the web page. Choose WAN1/WAN2 Bandwidth, Sessions, Ping Detect, daily or weekly for viewing different traffic graph. Click **Reset** to zero the accumulated RX/TX (received and transmitted) data of WAN. Click **Refresh** to renew the graph at any time.

Diagnostics >> Traffic Graph

The horizontal axis represents time. Yet the vertical axis has different meanings. For WAN1/WAN2 Bandwidth chart, the numbers displayed on vertical axis represent the numbers of the transmitted and received packets in the past.

For Sessions chart, the numbers displayed on vertical axis represent the numbers of the NAT sessions during the past.

VII-1-12 VPN Graph

Click **Diagnostics** and click **VPN Graph** to open the web page.

VPN Log Details

Select VPN Log Details to see log entries about VPN connections.

Diagnostics >> VPN Graph

Available settings are explained as follows:

Item	Description
Host to LAN/LAN to LAN	Select Host to LAN to view log entries on VPN connections that were initiated by VPN teleworkers. Select LAN to LAN to view log entries on LAN-to-LAN VPN connections to or from this router.
Index	Select a VPN connection to view its log entries.

VPN Graph

Select this tab to see a graphical representation of VPN traffic over time.

Diagnostics >> VPN Graph

VPN Log Details

VPN Graph

LAN to LAN ▾

or

Diagnostics >> Trace Route

Trace Route

☐ IPV4 ☒ IPV6

Trace Host / IP Address:

Run

Result

Clear

Available settings are explained as follows:

Item	Description
IPv4 / IPv6	Select the IP version used to perform the trace route.
Trace through	Select the WAN interface used to perform the trace route.
Protocol	Select either UDP or ICMP used to perform the trace route.
Host/IP Address	Enter the hostname or the IP address of trace route destination.

Trace Host/IP Address	Enter the hostname or the IPv6 address of trace route destination.
Run	Click this button to start the trace.
Clear	Click to clear the trace route result.

VII-1-14 Syslog Explorer

This page displays syslog information in real time. There are two options for displaying syslog information: Web Syslog and USB Syslog.

This page displays User/Firewall/call/WAN/VPN Syslog events and their time of occurrence. To enable Web Syslog, check the **Enable Web Syslog** checkbox, specify the type of Syslog events to view, and select the display mode. The log messages will start appearing as events matching the selected type occur.

Diagnostics >> Syslog Explorer

Available settings are explained as follows:

Item	Description
Enable Web Syslog	Check this box to enable Web Syslog.
Syslog Type	Select the type of Syslog info to monitor.
Export	Click to save the data as a file.
Refresh	Click to refresh this page manually.
Clear	Click to purge Syslog entries from the Web Syslog buffer.
Display Mode	Two display modes are available.  Stop record when fulls - When the Web Syslog buffer is full, no further logging will be performed. Always record the new event - Events are recorded in a FIFO manner. As the buffer gets full, oldest events are purged to make room for new events.
Time	Displays the time when the event occurred.
Message	Displays the event information.

VII-1-15 IPv6 TSPC Status

IPv6 TSPC (Tunnel Setup Protocol Client) status page could help you diagnose issues with IPv6 connections that utilize TSP.

If TSPC is configured properly, the router will display the following when the router has connected to the tunnel broker successfully.

[Diagnostics >> IPv6 TSPC Status](#)

WAN1	WAN2	Refresh
TSPC Enabled		
TSPC Connection Status		
Local Endpoint v4 Address :	114.44.54.220	
Local Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b9	
Router DNS name :	888866666.broker.freenet6.net	
Remote Endpoint v4 Address :	81.171.72.11	
Remote Endpoint v6 Address :	2001:05c0:1400:000b:0000:0000:0000:10b8	
Tspc Prefix :	2001:05c0:1502:0d00:0000:0000:0000:0000	
Tspc Prefixlen :	56	
Tunnel Broker :	amsterdam.freenet6.net	
Tunnel Status :	Connected	

Available settings are explained as follows:

Item	Description
Refresh	Click to refresh the page to show the latest status.
WAN1 ~ WAN2	Select the tab that corresponds to the WAN connection that you wish to view the IPv6 TSPC status.

VII-1-16 High Availability Status

This page displays the High Availability status of all routers that belong to the same DARP (DrayTek Address resolution Protocol) group.

Vigor routers that satisfy the following conditions are considered to be in the same DARP group:

- HA enabled
- the same Redundancy method
- the same Group ID
- the same Authentication Key
- the same Management Interface

Open [Diagnostics>>High Availability Status](#).

1. High Availability Status table displays 10 routers maximum. The local router will always show in the first row of this table.
2. A Status of "!" indicates that an error has occurred, refer to the **Details** page for more information.

Item	Description
Details/Back	Details - Click to display detailed status about HA configuration for the selected router. Back - Click to return to the previous page.
HA Setup	Click to navigate to Applications>>High Availability to modify the HA configuration.
Renew	Click to get the latest status of routers other than the primary router.
Refresh	Click to get the latest status of the primary router.
Status	“!” means an error has occurred. Refer to Detailed information and modify HA settings if required.
Router Name	Display the name of the device.
IP	Display the IPv4 address of such router.
Role	"Down" means the function of HA is disabled. "Primary" means the router is the primary HA router. "Secondary" means the router is a secondary HA router.
Stable	"No" means the primary router has not been identified yet. DARP is still negotiating. "YES" means the primary router is identified.
WAN	"At Least One UP" means that at least one WAN interface is connected to Internet. "All WANs Down" means that no WAN interface is currently connected to Internet.
Sync Status	"Not Ready" means configuration synchronization is unable to execute, or configuration synchronization is disabled, or synchronization initialization has executed but failed. "Ready" means configuration synchronization is ready to execute. "Progressing" means configuration synchronization is in progress. "Fail" means configuration synchronization has executed and failed; or the model name is incorrect. "Equal" means the corresponding settings are equal to the primary router.
Cached Time	Displays the elapsed time since the last status update of the other routers (i.e., other than the primary router).

To view detailed information of a router, click Status, Router Name IPv4 or Details, and the following page will be shown:

Diagnostics >> High Availability Status >> Details

VII-1-17 Authentication Information

Authentication User List

This page shows authentication requests handled by the Internal RADIUS or Local 802.1X services.

When the mouse cursor is hovered over a link under User Name, information about the RADIUS or 802.1X authentication attempt (including authentication failure information) will appear in a pop-up dialog box.

Authentication User List		Authentication Information Log	
User Name	Authentication Failure Times	User Name	Authentication Failure Times
test_1	0	test_sales	0

Note:

- 1.This is the authentication list for router's **Internal RADIUS** or Local 802.1X
- 2.For those clients are authenticated by external RADIUS server, please find the information from the server.

Authentication Information Log

This page will display the complete authentication log information.

Authentication User List		Authentication Information Log	
☐ Enable			Refresh Clear
	Syslog Type	Radius ▼	Display Mode always record the new event ▼
		Radius	
		802.1X	
		ALL	
Time			Message

Available settings are explained as follows:

Item	Description
Enable	Check to enable Authentication Information Log.
Refresh	Click to refresh the Authentication Information Log.
Clear	Click to clear the Authentication Information Log.
Syslog Type	Select the type of authentication information to be displayed: Radius, 802.1X, or ALL (both Radius and 802.1X).
Display Mode	Choose the mode that the logging information will be shown. Stop record when fulls – when the buffer is full, the system will stop recording. Always record the new event – when the buffer is full, the oldest event will be purged to make room for the new event.
Time	Display the time of the event.
Message	Displays the details of the authentication event.

VII-1-18 DoS Flood Table

This page shows IP addresses that are currently engaging in DoS flood as detected by the DoS Flooding Defense mechanism. It provides useful information to network engineers (e.g., MIS engineers) to diagnose the network environment to identify potentially malicious network traffic and entities. Identified IP addresses and the destination ports used in SYN, UDP, and ICMP Flood attacks will be shown on the respective tab pages.

IP addresses that are suspected to be attacking the network can be blocked by clicking the **Block** button on the SYN Flood, UDP Flood and ICMP Flood tab pages.

Diagnostics >> DoS Flood Table

IPv4

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	

IPv6

SYN Flood	UDP Flood	ICMP Flood	Refresh
Tracing IP		Destination Port	

Note:
You need to enable SYN/UDP/ICMP flood defense in [Firewall >> Defense Setup](#) to make this table effective.

Info

The icon -  - means there is something wrong (e.g., attacking the system) with that IP address.

VII-1-19 Route Policy Diagnosis

With the analysis done by such page, possible path (static route, routing table or policy route) of the packets sent out of the router can be traced.

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode ☒ Analyze a single packet
☐ Analyze multiple packets by uploading an input file

Packet Information

Protocol	ICMP	
Src IP	Specify an IP	192.168.1.2
Dst IP	Specify an IP	
Dst Port	Any Port	

Analyze

or

Diagnostics >> Route Policy Diagnosis

Test how the packets will be routed

- Mode ☐ Analyze a single packet
☒ Analyze multiple packets by uploading an input file

Input File

未選擇任何檔案 ([download](#) an example input file)

Analyze

Available settings are explained as follows:

Item	Description
Mode	Analyze a single packet – Choose such mode to make Vigor router analyze how a single packet will be sent by a route policy. Analyze multiple packets... – Choose such mode to make Vigor router analyze how multiple packets in a specified file will be sent by a route policy.
Packet Information	Specify the nature of the packets to be analyzed by Vigor router. ICMP/UDP/TCP/ANY - Specify a protocol for diagnosis. Src IP – Type an IP address as the source IP. Dst IP – Type an IP address as the destination IP. Dst Port – Use the drop down list to specify the destination port.

	Analyze – Click it to perform the job of analyzing. The analyzed result will be shown on the page..
Input File	It is available when Analyze multiple packets.. is selected as Mode. Select – Click the download link to get a blank example file. Then, click such button to select that blank “.csv” file for saving the result of analysis.  Analyze – Click it to perform the job of analyzing. The analyzed result will be shown on the page. If required, click export analysis to export the result as a file.  Note that the analysis was based on the current "load-balance/route policy" settings, we do not guarantee it will be 100% the same as the real case.

VII-2 Checking If the Hardware Status Is OK or Not

Follow the steps below to verify the hardware status.

1. Check the power line and WLAN/LAN cable connections. Refer to “**I-2 Hardware Installation**” for details.
2. Turn on the router. Make sure the **ACT LED** blink once per second and the correspondent **LAN LED** is bright.

3. If not, it means that there is something wrong with the hardware status. Simply back to “**I-2 Hardware Installation**” to execute the hardware installation again. And then, try again.

VII-3 Checking If the Network Connection Settings on Your Computer Is OK or Not

Sometimes the link failure occurs due to the wrong network connection settings. After trying the above section, if the link is still failed, please do the steps listed below to make sure the network connection settings is OK.

For Windows

Info

The example is based on Windows 7. As to the examples for other operation systems, please refer to the similar steps or find support notes in www.DrayTek.com.

1. Open **All Programs>>Getting Started>>Control Panel**. Click **Network and Sharing Center**.

2. In the following window, click **Change adapter settings**.

3. Icons of network connection will be shown on the window. Right-click on **Local Area Connection** and click on **Properties**.

4. Select **Internet Protocol Version 4 (TCP/IP)** and then click **Properties**.

5. Select **Obtain an IP address automatically** and **Obtain DNS server address automatically**. Finally, click **OK**.

For Mac OS

1. Double click on the current used Mac OS on the desktop.
2. Open the **Application** folder and get into **Network**.
3. On the **Network** screen, select **Using DHCP** from the drop down list of Configure IPv4.

VII-4 Pinging the Router from Your Computer

The default gateway IP address of the router is 192.168.1.1. For some reason, you might need to use “ping” command to check the link status of the router. **The most important thing is that the computer will receive a reply from 192.168.1.1.** If not, please check the IP address of your computer. We suggest you setting the network connection as **get IP automatically**. (Please refer to the previous section IX-3)

Please follow the steps below to ping the router correctly.

For Windows

1. Open the **Command Prompt** window (from **Start menu> Run**).
2. Enter **cmd**. The DOS command dialog will appear.

```

C:\> Command Prompt
Microsoft Windows XP [Version 5.1.2600]
(C) Copyright 1985-2001 Microsoft Corp.

D:\Documents and Settings\fae>ping 192.168.1.1

Pinging 192.168.1.1 with 32 bytes of data:

Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255
Reply from 192.168.1.1: bytes=32 time<1ms TTL=255

Ping statistics for 192.168.1.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

D:\Documents and Settings\fae>_

```

3. Enter **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“Reply from 192.168.1.1:bytes=32 time<1ms TTL=255”** will appear.
4. If the line does not appear, please check the IP address setting of your computer.

For Mac OS (Terminal)

1. Double click on the current used MacOs on the desktop.
2. Open the **Application** folder and get into **Utilities**.
3. Double click **Terminal**. The Terminal window will appear.
4. Enter **ping 192.168.1.1** and press [Enter]. If the link is OK, the line of **“64 bytes from 192.168.1.1: icmp_seq=0 ttl=255 time=xxxx ms”** will appear.

```
Terminal — bash — 80x24

Vigor10:~ draytek$
```

VII-5 Checking If the ISP Settings are OK or Not

If WAN connection cannot be up, check if the LEDs (according to the LED explanations listed on section I-1-1, Indicators and Connectors) are correct or not. If the LEDs are off, please:

- Change the **Physical Type** from **Auto negotiation** to other values (e.g., 100M full duplex).
- Next, change the physical type of modem (e.g., DSL/FTTX(GPON)/Cable modem) offered by ISP with the same value configured in Vigor router. Check if the LEDs on Vigor router are on or not.
- If not, please install an additional switch for connecting both Vigor router and the modem offered by ISP. Then, check if the LEDs on Vigor router are on or not.
- If the problem of LEDs cannot be solved by the above measures, please contact with the nearest reseller, or send an e-mail to DrayTek FAE for technical support.
- Check if the settings offered by ISP are configured well or not.

When the LEDs are on and correct, yet the WAN connection still cannot be up, please:

- Open **WAN >> Internet Access** page and then check whether the ISP settings are set correctly. Click **Details Page** of WAN1~WAN2 to review the settings that you configured previously.

WAN >> Internet Access

Internet Access

Index	Display Name	Physical Mode / Port	Access Mode	
WAN1		Ethernet / P1	Static or Dynamic IP	Details Page IPv6
WAN2		Ethernet / P2	Static or Dynamic IP	Details Page IPv6

VII-6 Backing to Factory Default Setting If Necessary

Sometimes, a wrong connection can be improved by returning to the default settings. Try to reset the router by software or hardware. Such function is available in **Admin Mode** only.

Info

After pressing factory default setting, you will lose all settings you did before. Make sure you have recorded all useful settings before you pressing. The password of factory default is null.

Software Reset

You can reset the router to factory default via Web page. Such function is available in **Admin Mode** only.

Go to **System Maintenance** and choose **Reboot System** on the web page. The following screen will appear. Choose **Using factory default configuration** and click **Reboot Now**. After few seconds, the router will return all the settings to the factory settings.

System Maintenance >> Reboot System

Reboot System

Do you want to reboot your router ?

- ☒ Using current configuration
☐ Using factory default configuration

Reboot Now

Auto Reboot Time Schedule

Schedule Profile : None, None, None, None

Note:

Action and Duration Time settings will be ignored.

OK

Cancel

Hardware Reset

While the router is running (ACT LED blinking), press the **Factory Reset** button and hold for more than 5 seconds. When you see the **ACT** LED blinks rapidly, please release the button. Then, the router will restart with the default configuration.

After restore the factory default setting, you can configure the settings for the router again to fit your personal request.

VII-7 Contacting DrayTek

If the router still cannot work correctly after trying many efforts, please contact your dealer for further help right away. For any questions, please feel free to send e-mail to support@DrayTek.com.

Part VIII Telnet Commands

Accessing Telnet of Vigor2962

This chapter also gives you a general description for accessing telnet and describes the firmware versions for the routers explained in this manual.

Info

For Windows 7 user, please make sure the Windows Features of Telnet Client has been turned on under Control Panel>>Programs.

Enter **cmd** and press Enter. The Telnet terminal will be open later.

In the following window, type **Telnet 192.168.1.1** as below and press Enter. Note that the IP address in the example is the default address of the router. If you have changed the default, enter the current IP address of the router.

Next, enter admin/admin for Account/Password. Then, enter ?. You will see a list of valid/common commands depending on the router that your use.

For users using previous Windows system (e.g., 2000/XP), simply click **Start >> Run** and type **Telnet 192.168.1.1** in the Open box as below. Next, type admin/admin for Account/Password. And, type ? to get a list of valid/common commands.

Telnet Command: csm appe prof

Commands under CSM allow you to set CSM profile to define policy profiles for different policy of IM (Instant Messenger)/P2P (Peer to Peer) application.

“csm appe prof “ is used to configure the APP Enforcement Profile name. Such profile will be applied in **Default Rule** of **Firewall>>General Setup** for filtering.

Syntax

csm appe prof -i INDEX [-v | -n NAME|setdefault]

Syntax Description

Parameter	Description
INDEX	It means to specify the index number of CSM profile, from 1 to 32.
- v	It means to view the configuration of the CSM profile.
- n	It means to set a name for the CSM profile.
NAME	It means to specify a name for the CSM profile, less then 15 characters.
setdefault	Reset to default settings.

Example

```
> csm appe prof -i 1 -n games
The name of APPE Profile 1 was setted.
```

Telnet Command: csm appe set

It is used to configure group settings for IM/P2P/Protocol and Others in APP Enforcement Profile.

csm appe set -i INDEX [-v GROUP| -e AP_IDX | -d AP_IDX]

Syntax Description

Parameter	Description
INDEX	Specify the index number of CSM profile, from 1 to 32.
- v	View the IM/P2P/Protocol and Others configuration of the CSM profile.
-e	Enable to block specific application.
-d	Disable to block specific application.
GROUP	Specify the category of the application. Available options are: IM, P2P, Protocol and Others.
AP_IDX	Each application has independent index number for identification in CLI command. Specify the index number of the application here. If you have no idea of the inex number, do the following (Take IM as an example): Type “csm appe set -i 1 -v IM”, the system will list all of the index numbers of the applications categorized under IM.
ACTION	Specify the action of the application, 0 or 1. 0: Block. All of the applications meet the CSM rule will be blocked. 1: Pass. All of the applications meet the CSM rule will be passed.

Example

```
> csm appe set -i 1 -v IM

      Type      Index      Name      Version  Advance
Advanced Option: (M)essage, (F)ile Transfer, (G)ame, (C)onference, and
(O)ther
Activities
-----
      IM        0          AIM          5.9 M F G C
      IM        1      AIM Login          8
      IM        2      AliWW          2008
      IM        3      Ares          2.0.9
      IM        4      BaiduHi        37378
      IM        5      Facebook      97.0.0.18.69
      IM        6      Fetion          2010
      IM        7      GaduGadu Protocol
      IM        8      Google Hangouts          18.0
      IM        9      ICQ          7
      IM       10      iMessage

>
```

Telnet Command: csm appe show

It is used to display group (IM/P2P/Protocol and Others) information APP Enforcement Profile.

csm appe show [-a|-i|-p|-t|-m]

Syntax Description

Parameter	Description
-a	View the configuration status for All groups.
-i	View the configuration status of IM group.
-p	View the configuration status of P2P group.
-t	View the configuration status of protocol group.
-m	View the configuration status of Others group.

Example

```
>csm appe show -t

      Type      Index      Name      Version  Advance
Advanced Option: (M)essage, (F)ile Transfer, (G)ame, (C)onference, and
(O)ther
Activities
-----
      PROTOCOL    52          DB2
      PROTOCOL    53          DNS
      PROTOCOL    54          FTP
      PROTOCOL    55          HTTP          1.1
      PROTOCOL    56          IMAP          4.1
      PROTOCOL    57      IMAP STARTTLS          4.1
      PROTOCOL    58          IRC          2.4.0
      .....

```

Telnet Command: csm appe config

It is used to display the configuration status (enabled or disabled) for IM/P2P/Protocol/Other applications.

csm appe config -v INDEX [-i|-p|-t|-m]

Syntax Description

Parameter	Description
<i>INDEX</i>	Specify the index number of CSM profile, from 1 to 32.
<i>-i</i>	View the configuration status of IM group.
<i>-p</i>	View the configuration status of P2P group.
<i>-t</i>	View the configuration status of protocol group.
<i>-m</i>	View the configuration status of Others group.

Example

```
> csm appe config -v 1 -m

      Group      Type      Index      Name      Enable      A
vance Enable
Advance abbreviation: Message, File Transfer, Game, Conference, and Other
Advance abbreviation: : M, F, G, C, and O
-----
      OTHERS      TUNNEL      75      DNSCrypt      Disable
      OTHERS      TUNNEL      76      DynaPass      Disable
      OTHERS      TUNNEL      77      FreeU         Disable
      OTHERS      TUNNEL      78      HTTP Proxy    Disable
      OTHERS      TUNNEL      79      HTTP Tunnel   Disable
      OTHERS      TUNNEL      80      Hamachi       Disable
      OTHERS      TUNNEL      81      MS Teredo     Disable
      OTHERS      TUNNEL      82      MS Teredo     Disable
      OTHERS      TUNNEL      83      PGPNet        Disable
      OTHERS      TUNNEL      84      Ping Tunnel   Disable

Telnet Command: csm ucf

It is used to configure settings for URL control filter profile.

Syntax

csm ucf show

csm ucf setdefault

csm ucf msg *MSG*

csm ucf obj *INDEX* [*-n PROFILE_NAME* | *-l [P|B|A]* | *uac* | *wf*]

csm ucf obj *INDEX -n PROFILE_NAME*

csm ucf obj *INDEX -p VALUE*

csm ucf obj *INDEX -l P|B|A*

csm ucf obj *INDEX uac*

csm ucf obj *INDEX wf*

Syntax Description

Parameter	Description
<i>show</i>	It means to display all of the profiles.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>msg MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>obj</i>	It means to specify the object for the profile.
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
<i>-n</i>	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
<i>-p</i>	Set the priority (defined by the number specified in VALUE) for the profile.
<i>VALUE</i>	Number 0 to 3 represent different conditions. 0: It means Bundle: Pass. 1: It means Bundle: Block. 2: It means Either: URL Access Control First. 3: It means Either: Web Feature First.
<i>-l</i>	It means the log type of the profile. They are: P: Pass, B: Block, A: All
<i>MSG</i>	It means to specify the Administration Message, less then 255 characters
<i>uac</i>	It means to set URL Access Control part.
<i>wf</i>	It means to set Web Feature part.

Example

```
> csm ucf obj 1 -n game -l B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[ ]Prevent web access from IP address.
No Obj NO.    Object Name
-----

No Grp NO.    Group Name
-----
```

Telnet Command: **csm ucf obj INDEX uac**

It means to configure the settings regarding to URL Access Control (uac).

Syntax

csm ucf obj INDEX uac -v

```

csm ucf obj INDEX uac -e
csm ucf obj INDEX uac -d
csm ucf obj INDEX uac -a P|B
csm ucf obj INDEX uac -i E|D
csm ucf obj INDEX uac -o KEY_WORD_Object_Index
csm ucf obj INDEX uac -g KEY_WORD_Group_Index

```

Syntax Description

Parameter	Description
INDEX	It means to specify the index number of CSM profile, from 1 to 8.
-v	It means to view the protocol configuration of the CSM profile.
-e	It means to enable the function of URL Access Control.
-d	It means to disable the function of URL Access Control.
-a	Set the action of specific application, P or B. B: Block. The web access meets the URL Access Control will be blocked. P: Pass. The web access meets the URL Access Control will be passed.
-i	Prevent the web access from any IP address. E: Enable the function. The Internet access from any IP address will be blocked. D: Disable the function.
-o	Set the keyword object.
KEY_WORD_Object_Index	Specify the index number of the object profile.
-g	Set the keyword group.
KEY_WORD_Group_Index	Specify the index number of the group profile.

Example

```

> csm ucf obj 1 uac -i E
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[pass]
[v]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----
  No  Grp NO.   Group Name
-----

> csm ucf obj 1 uac -a B
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v]Prevent web access from IP address.
  No  Obj NO.   Object Name
-----

```

No	Grp NO.	Group Name
-----	-----	-----

Telnet Command: **csm ucf obj INDEX wf**

It means to configure the settings regarding to Web Feature (wf).

Syntax

csm ucf obj INDEX wf -v

csm ucf obj INDEX wf -e

csm ucf obj INDEX wf -d

csm ucf obj INDEX wf -a P|B

csm ucf obj INDEX wf -s WEB_FEATURE

csm ucf obj INDEX wf -u WEB_FEATURE

csm ucf obj INDEX wf -f File_Extension_Object_index

Syntax Description

Parameter	Description
<i>INDEX</i>	It means to specify the index number of CSM profile, from 1 to 8.
<i>- v</i>	It means to view the protocol configuration of the CSM profile.
<i>-e</i>	It means to enable the restriction of web feature.
<i>-d</i>	It means to disable the restriction of web feature.
<i>-a</i>	Set the action of web feature, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-s</i>	It means to enable the the Web Feature configuration. Features available for configuration are: c: Cookie p: Proxy u: Upload
<i>-u</i>	It means to cancel the web feature configuration.
<i>-f</i>	It means to set the file extension object index number.
<i>File_Extension_Object_index</i>	Enter the index number (1 to 8) for the file extension object.

Example

```
> csm ucf obj 1 wf -s c
Profile Index: 1
Profile Name:[game]
Log:[none]
Priority Select : [Bundle : Pass]

[ ]Enable URL Access Control
Action:[block]
[v] Prevent web access from IP address.
  No  Obj NO.   Object Name
  -----
  No  Grp NO.   Group Name
  -----

[ ]Enable Restrict Web Feature
Action:[pass]
```

File Extension Object Index : [0]	Profile Name : []
[V] Cookie [] Proxy [] Upload	

Telnet Command: csm wcf

It means to configure the settings regarding to web control filter (wcf).

Syntax

csm wcf show

csm wcf look

csm wcf cache

csm wcf server WCF_SERVER

csm wcf msg MSG

csm wcf setdefault

csm wcf obj INDEX -v

csm wcf obj INDEX -a P|B

csm wcf obj INDEX -n PROFILE_NAME

csm wcf obj INDEX -l P|B|A

csm wcf obj INDEX -o KEY_WORD Object Index

csm wcf obj INDEX -g KEY_WORD Group Index

csm wcf obj INDEX -w E|D|P|B

csm wcf obj INDEX -s CATEGORY|WEB_GROUP

csm wcf obj INDEX -u CATEGORY|WEB_GROUP

Syntax Description

Parameter	Description
<i>show</i>	It means to display the web content filter profiles.
<i>Look</i>	It means to display the license information of WCF.
<i>Cache</i>	It means to set the cache level for the profile.
<i>Server WCF_SERVER</i>	It means to set web content filter server.
<i>Msg MSG</i>	It means de set the administration message. MSG means the content (less than 255 characters) of the message itself.
<i>setdefault</i>	It means to return to default settings for all of the profile.
<i>obj</i>	It means to specify the object profile.
<i>INDEX</i>	It means to specify the index number of web content filter profile, from 1 to 8.
<i>- v</i>	It means to view the web content filter profile.
<i>-a</i>	Set the action of web content filter profile, P or B. B: Block. The web access meets the web feature will be blocked. P: Pass. The web access meets the web feature will be passed.
<i>-n</i>	It means to set the profile name.
<i>PROFILE_NAME</i>	It means to specify the name of the profile (less than 16 characters)
<i>-l</i>	It means the log type of the profile. They are: P: Pass,

	B: Block, A: All
-o	Set the keyword object.
KEY_WORD_Object_Index	Specify the index number of the object profile.
-g	Set the keyword group.
KEY_WORD_Group_Index	Specify the index number of the group profile.
-w	It means to set the action for the black and white list. E:Enable, D:Disable, P:Pass, B:Block
-s	It means to choose the items under CATEGORY or WEB_GROUP.
-u	It means to discard items under CATEGORY or WEB_GROUP.
WEB_GROUP	Child_Protection, Leisure, Business, Chating, Computer Internet, Other
CATEGORY	Includes: "Advertisement & Pop-Ups", "Alcohol & Tobacco", "Anonymizers", "Arts", "Business", "Transportation", "Chat", "Forums & Newsgroups", "Compromised", "Computers & Technology", "Criminal & Activity", "Dating & Personals", "Down sites", "Education", "Entertainment", "Finance", "Gambling", "Games", "Government", "Hate & Intolerance", "Health & Medicine", "Illegal Drug", "Job Search", "Streaming Media & Downloads", "News", "Non-profits & NGOs", "Nudity", "Persional Sites", "Phishing & Fraud", "Politics", "Pornography & Sexually explicit", "Real Estate", "Religion", "Restaurants & Dining", "Search engines & Portals", "Shopping", "Social Networking", "Spam sites", "Sports", "Malware", "Translators", "Travel", "Violence", "Weapons", "Web-Based Email", "General", "Leisure & Recreation", "Botnets", "Cults", "Fashion & Beauty", "Greeting Cards", "Hacking", "Illegal Softwares", "Image Sharing", "Information Security", "Instant Messaging", "Network Errors", "Parked Domains", "Peer-to-Peer", "Private IP Address", "School Cheating", "Sex Education", "Tasteless", "Child Abuse Images", "Uncategorised Sites"

Example

```
> csm wcf obj 1 -n test_wcf
Profile Index: 1
Profile Name:[test_wcf]
[]White/Black list
Action:[block]

Telnet Command: csm dnsf

It means to configure the settings regarding to DNS filter.

csm dnsf enable *ON|OFF*

csm dnsf syslog *N|P|B|A*

csm dnsf wcf *INDEX*

csm dnsf ucf *INDEX*

csm dnsf cachetime *CACHE_TIME*

csm dnsf blockpage *show/on/off*

csm dnsf profile_show

csm dnsf profile_edit *INDEX*

csm dnsf profile_edit *INDEX -n PROFILE_NAME*

csm dnsf profile_edit *INDEX -I P|B|A*

csm dnsf profile_edit *INDEX -w WCF_PROFILE*

csm dnsf profile_edit *INDEX -u UCF_PROFILE*

csm dnsf profile_edit *INDEX -c CACHE_TIME*

csm dnsf profile_setdefault

csm dnsf local_bw *e/d/p/b/a/o/s/c*

Syntax Description

Parameter	Description
<i>enable</i>	Enable or disable DNS Filter. ON: enable. OFF: disable.
<i>syslog</i>	Determine the content of records transmitting to Syslog. P: Pass. Records for the packets passing through DNS filter will be sent to Syslog. B: Block. Records for the packets blocked by DNS filter will be sent to Syslog. A: All. Records for the packets passing through or blocked by DNS filter will be sent to Syslog. N: None. No record will be sent to Syslog.
<i>WCF INDEX</i>	Specify a WCF profile (1 to 8) as the base of DNS filtering. Type a number to indicate the index number of WCF profile (1 is first profile, 2 is second profile, and so on ...).
<i>UCF INDEX</i>	Specify a UCF profile (1 to 8) as the base of DNS filtering. Type a

	number to indicate the index number of UCF profile (1 is first profile, 2 is second profile, and so on ...).
<i>cachetime</i> <i>CACHE_TIME</i>	<i>CACHE_TIME</i> : It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.
<i>blockpage</i>	DNS sends block page for redirect port. When a web page is blocked by DNS filter, the router system will send a message page to describe that the page is not allowed to be visisted. ON: Enable the function of displaying message page. OFF: Disable the function of displaying message page. SHOW: Display the function of displaying message page is ON or OFF.
<i>profile_show</i>	Display the table of the DNS filter profile.
<i>profile_edit</i>	Modify the content of the DNS filter profile.
<i>-n</i> <i>PROFILE_NAME</i>	<i>PROFILE_NAME</i> : Enter the name of the DNS filter profile that you want to modify.
<i>-I</i> <i>P B A</i>	Specify the log type of the profile. P: Pass. B: Block. A: All.
<i>-w</i> <i>WCF_PROFILE</i>	<i>WCF_PROFILE</i> : Enter the index number of the WCF profile.
<i>-u</i> <i>UCF_PROFILE</i>	<i>UCF_PROFILE</i> : Enter the index number of the UCF profile.
<i>-c</i> <i>CACHE_TIME</i>	<i>-c</i> means to set the cache time for DNS filter. <i>CACHE_TIME</i> : It means to set the time for cache to live (available values are 1 to 24; 1 is one hour, 2 is two hours, and so on ...) for DNS filter.
<i>profile_setdefault</i>	Reset to factory default setting.
<i>local_bw</i> <i>e/d/p/b/a/o/s/c</i>	Set the Black/White List of DNS Filter Local Setting. e: Enable the function of black/white list. d: Disable the function of black/white list. p: Set the action as "Pass". b: Set the action as "Block". a 0/1/2/3/4 [value]: Set the address type. 0=mask, 1=single, 2=any, 3=range, 4=group and objects g item_number group_index: Select the group index (for the address type set with 4, group and objects) item_number=1 or 2 (group 1 or group 2) group_index=1 to 192 o item_number object_index: Select the object index (for the address type set with 4, group and objects) item_number=1 or 2 (object 1 or object 2) object_index=1 to 32 s: Show the config setting. c: Clear the config setting and reset to factory default settings.

Example

```
> csm dnsf profile_setdefault
setdefault!!!
>csm dnsf cachetime 20
dns cache time set up!!!
> csm dnsf local_bw e
Enable the Block and White List.
> csm dnsf local_bw a 1 192.168.1.11
Address Type: 0:mask, 1:single, 2:any, 3:range, 4:object and group
```

```

Set the [SINGLE] Address type
> csm dnsf local_bw s
Show Block/White List information for DNS Filter Local Setting
Block/White List:[ENABLE]
Action:[PASS]
Address type:[SINGLE]
Start ip address:[192.168.1.11]
End/Mask ip address:[0.0.0.0]
Group 1:[0]
Group 2:[0]
Object 1:[0]
Object 2:[0]
>

```

Telnet Command: ddns enable

Enable/disable the DDNS service.

Syntax Description

Parameter	Description
<i>Enable <0/1></i>	Enable or disable DDNS service. 1: enable. 0F: disable.

Example

```

> ddns enable 1
  Enable Dynamic DNS Setup
>

```

Telnet Command: ddns set

This command allows users to set Dynamica DNS account.

Syntax

ddns set *option <value>*

Syntax Description

Parameter	Description
<i>-S <value></i>	It means to specify Servive Provider. If user want to set User-Defined page, value must select 1. <value>= 1~19 1: User-Defined 2:3322 DDNS (www.3322.org) 3: ChangeIP.com (www.changeip.com) 4:ddns.com.cn (www.ddns.com.cn) 5: DtDNS (www.dtdns.com) 6: dyn.com (www.dyn.com) 7: DynAccess (www.dynaccess.com) 8: dynami.co.za (www.dynami.co.za) 9: freedns.afraid.org (freedns.afraid.org) 10: NO-IP.COM Free (www.no-ip.com) 11: opendns.com (www.opendns.com) 12: OVH (www.ovh.com) 13: Strato (www.strato.eu) 14: TwoDNS (www.twodns.de) 15: TZO (www.tzo.com) 16: ubddns.org (ubddns.org)

	17: Viettel DDNS (vddns.vn) 18: vigorddns.com (www.vigorddns.com) 19: ZoneEdit DDNS (dynamic.zoneedit.com)
<i>T</i> <value>	It means to type Service Type. <value>= 1~3 1: Dynamic 2: Custom 3: Static
<i>-D</i> <Host Name> <sub Domain Name>	It means to type Domain Name. i.e: Account index 1 setting Domain Name for Dynamic Service Type >> ddns set -i 1 -T 1 -D "host ddns.com.cn" i.e: Account index 2 setting Domain Name for Custom Service Type >> ddns set -i 2 -T 2 -D "domain name" i.e: Account index 3 setting Domain Name for Static Service Type >> ddns set -i 3 -T 3 -D "domain name"
<i>-L</i> <value>	It means to type Login Name. [value]: limit up to 64 characters
<i>-P</i> <value>	It means to type Password. [value]: limit up to 24 characters
<i>-i</i> <value>	It means index number of Dynamic DNS Account. <value>=1~6
<i>-E</i> <value>	It means to enable /disable Dynamic DNS Account. <value>=0~1 0: Disable 1: Enable
<i>-W</i> <value>	It means to specify WAN Interface. <value>=1~14 1: WAN1 First 2: WAN1 Only 3: WAN2 First 4: WAN2 Only 5: WAN3 First 6: WAN3 Only 7: WAN4 First example: To set WAN Interface: WAN1 First
<i>-C</i> <value>	It means to enable /disable Wildcards. <value>=0~1 0: Disable 1: Enable
<i>-B</i> <value>	It means to enable / disable Backup MX. <value>=0~1 0: Disable 1: Enable
<i>-M</i> <value>	It means to type Mail Extender. [value]: limit up to 60 characters
<i>-R</i> <value>	It means to type Determine Real WAN IP. <value>=0~1 0: WAN IP, 1: Internet IP
<i>-H</i> <value>	It means to type User-Defined Provider Host. <value>= limit up to 64 characters
<i>-A</i> <value>	It means to type User-Defined Service API. <value>= limit up to 256 characters
<i>-a</i> <value>	It means to type User-Defined Auth Type. <value>=0~1 0: basic 1: URL
<i>-N</i> <value>	It means to type User-Defined Connection Type. <value>=0~1 0: Http 1: Https
<i>-O</i> <value>	It means to type User-Defined Server Response. <value>: limit up to 32 characters

Example

```
> ddns set -i 1 -S 6 -T 1 -D "hostname dnsalias.net" -L user1 -P pwd1
> Save OK
```

Telnet Command: ddns log

Displays the DDNS log.

Example

```
>ddns log
>
```

Telnet Command: ddns time

Sets and displays the DDNS time.

Syntax

ddns time *<update in minutes>*

Syntax Description

Parameter	Description
<i>Update in minutes</i>	Enter the value as DDNS time. The range is from 1 to 14400.

Example

```
> ddns time
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1440
> ddns time 1000
ddns time <update in minutes>
Valid: 1 ~ 1440
%Now: 1000
```

Telnet Command: ddns forceupdate

This command will update DDNS automatically.

Example

```
> ddns forceupdate
Now updating DDNS ...
Please check result by using command "ddns log"
```

Telnet Command: ddns setdefault

This command will return DDS with factory default settings.

Example

```
>ddns setdefault
>Set to Factory Default.
```

Telnet Command: ddns show

This command allows users to check the content of selected DDNS account.

Syntax

ddns show -i <value>

Syntax Description

Parameter	Description
-i <value>	Display the content of selected DDNS account by entering the index number of the account. <value>=1~6

Example

```
> ddns show -i 1
-----
Index: 1
[ ] Enable Dynamic DNS Account
WAN Interface: WAN1 First
Service Provider: dyn.com (www.dyn.com)
Service Type: Dynamic
Domain Name: [].[]
Login Name:
[ ] Wildcards
[ ] Backup MX
Mail Extender:
Determine Real WAN IP: WAN IP

DrayTek>
```

Telnet Command: dos

This command allows users to configure the settings for DoS defense system.

Syntax

dos [-V | D | A]

dos [-s ATTACK_F [THRESHOLD][TIMEOUT]]

dos [-a | e [ATTACK_F][ATTACK_0] | d [ATTACK_F][ATTACK_0]]

dos [-o [LOG_TYPE]|p [LOG_TYPE] |l [LOG_TYPE]]

**dos -P [add4/remove4] [type] [value] |[add6/remove6] [type] [value] | [show] | remove4 all
|remove6 all]**

**dos -B [add4/remove4] [type] [value] |[add6/remove6] [type] [value] | [show] | remove4 all
|remove6 all]**

dos -o [0/1]

dos -p [0/1]

dos -l [0/1/2/3]

Syntax Description

Parameter	Description
-V	It means to view the configuration of DoS defense system.
-D	It means to deactivate the DoS defense system.
-A	It means to activate the DoS defense system.

-s	It means to enable the defense function for a specific attack and set its parameter(s).
ATTACK_F	It means to specify the name of flooding attack(s) or portscan, e.g., synflood, udpflood, icmpflood, or portscan.
THRESHOLD	It means the packet rate (packet/second) that a flooding attack will be detected. Set a value larger than 20.
TIMEOUT	It means the time (seconds) that a flooding attack will be blocked. Set a value larger than 5.
-a	It means to enable the defense function for all attacks listed in ATTACK_0.
-e	It means to enable defense function for a specific attack(s).
ATTACK_0	It means to specify a name of the following attacks: ip_option, tcp_flag, land, teardrop, smurf, pingofdeath, traceroute, icmp_frag, syn_frag, unknow_proto, fraggle.
-d	It means to disable the defense function for a specific attack(s).
-P [add4/remove4] [type] [value] [add6/remove6] [type] [value] [show] remove4 all remove6 all]	Add or remove the IPv4/IPv6 address in the white passing IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the whitelist. add6/remove6: Add/remove an IPv6 address to/from the whitelist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the whitelist.
-B [add4/remove4] [type] [value] [add6/remove6] [type] [value] [show] remove4 all remove6 all]	Add or remove the IPv4/IPv6 address in the black blocking IP list. add4/remove4: Add /remove an IPv4/IPv6 address to/from the blacklist. add6/remove6: Add/remove an IPv6 address to/from the blacklist. Type: Two types, -i and -c. In which, "-i" means the IPv4 address and "-c" means the country object. Value: Enter the IP address for -i; enter the index number of the country object profile. Show: Display the blacklist.
dos -o <0/1>	Enable/Disable dos defense log. 0: Disable 1: Enable
dos -p <0/1>	Enable/Disable spoofing defense log. 0: Disable 1: Enable
dos -l <0/1/2/3>	Enable/Disable dos defense black/white list log. 0: None 1: White list 2: Black List 3: All

Example

```
>dos -A
The Dos Defense system is Activated
```

```
>dos -s synflood 50 10
```

```
Synflood is enabled! Threshold=50 <pke/sec> timeout=10 <pke/sec>
```

Telnet Command: exit

Type this command will leave telnet window.

Telnet Command: Internet

This command allows you to configure detailed settings for WAN connection.

Syntax

internet *-W n -M n [-<command> <parameter> | ...]*

Syntax Description

Parameter	Description
<i>-W n</i>	It means to select WAN interface for configuration. n: 1 to x. The default is WAN1.
<i>-M n</i>	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 - 7, A and B) n=0: Offline n=1: PPPoE n=2: Dynamic IP n=3: Static IP n=4: PPTP with Dynamic IP, n=5: PPTP with Static IP, n=6: L2TP with Dynamic IP n=7: L2TP with Static IP n=A: 3G/4G USB Modem(PPP mode), n=B: 3G/4G USB Modem(DHCP mode)
<i><command><parameter> ...]</i>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-S <isp name></i>	It means to set ISP Name (max. 23 characters).
<i>-P <on/off></i>	It means to enable PPPoE Service.
<i>-u <username></i>	It means to set username (max. 49 characters) for Internet accessing.
<i>-p <password></i>	It means to set password (max. 49 characters) for Internet accessing.
<i>-a n</i>	It means to set PPP Authentication Type and n means different types (represented by 0-1). n=0: PAP/CHAP (this is default setting) n=1: PAP Only
<i>-t n</i>	It means to set connection duration and n means different conditions. n=-1: Always-on

	n=1 ~ 999: Idle time for offline (default 180 seconds)
-i <ip address>	It means that PPPoE server will assign an IP address specified here for CPE (PPPoE client). If you type 0.0.0.0 as the <ip address>, ISP will assign suitable IP address for you. However, if you type an IP address here, the router will use that one as a fixed IP.
-w <ip address>	It means to assign WAN IP address for such connection. Please type an IP address here for WAN port.
-n <netmask>	It means to assign netmask for WAN connection. You have to type 255.255.255.xxx (x is changeable) as the netmask for WAN port.
-g <gateway>	It means to assign gateway IP for such WAN connection.
-s <server ip>	It means to set PPTP/L2TP Server IP. <server ip>= ppp.qqq.rrr.sss: PPTP/L2TP server IP
-A <idx>	It means to set Always On mode, and <idx> as backup WAN#.
-B <mode>	It means to set Backup mode. <mode> 0: When any WAN disconnect; 1: When all WAN disconnect.
-V	It means to view Internet Access profile.
-C <sim pin code>	Set (PPP mode) SIM PIN code (max. 15 characters).
-O <init string>	Set (PPP mode) Modem Initial String (max. 47 characters).
-T <init string2>	Set (PPP mode) Modem Initial String2 (max. 47 characters)
-D <dial string>	Set (PPP mode) Modem Dial String (max. 31 characters).
-v <service name>	Set (PPP mode) Service Name (max. 23 characters).
-m <ppp username>	Set (PPP mode) PPP Username (max. 63 characters).
-o <ppp password>	Set (PPP mode) PPP Password (max. 62 characters).
-e n	Set (PPP mode) PPP Authentication Type. n= 0: PAP/CHAP (default), 1: PAP Only
-q n	(PPP mode) Index(1-15) in Schedule Setup-One
-x n	(PPP mode) Index(1-15) in Schedule Setup-Two
-y n	(PPP mode) Index(1-15) in Schedule Setup-Three
-z n	(PPP mode) Index(1-15) in Schedule Setup-Four
-Q <mode>	Set (PPP mode or DHCP mode) WAN Connection Detection Mode. <mode> 0: ARP Detect; 1: Ping Detect
-I <ping ip>	Set (PPP mode or DHCP mode) WAN Connection Detection Ping IP. <ping ip>= ppp.qqq.rrr.sss: WAN Connection Detection Ping IP
-L n	Set (PPP mode) WAN Connection Detection TTL (1-255) value.
-E <sim pin code>	Set (DHCP mode) SIM PIN code (max. 19 characters).
-G <mode>	Set (DHCP mode) Network Mode. <mode> 0: 4G/3G/2G; 1: 4G Only; 2: 3G Only;

	3: 2G Only
-N <apn name>	Set (DHCP mode) APN Name (max. 47 characters)
-U n	(DHCP mode) MTU(1000-1440)

Example

```
>internet -M 1 -S tcom -u username -p password -a 0 -t -1 -i 0.0.0.0
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 ISP Name set to tcom
WAN1 Username set to username
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
WAN1 Idle timeout set to always-on
WAN1 Gateway IP set to 0.0.0.0
> internet -W 1 -M 1 -u link1 -p link1 -a 0
You are going to watching and setting in WAN 1
WAN1 Internet Mode set to PPPoE/PPPoA
WAN1 Username set to link1
WAN1 Password set successful
WAN1 PPP Authentication Type set to PAP/CHAP
> internet -V
WAN1 Internet Mode:
PPPoE
ISP Name:
Username: link1
Authentication: PAP/CHAP
Idle Timeout: -1
WAN IP: Dynamic IP
```

Telnet Command: ip pubsubnet

This command allows users to enable or disable the IP routing subnet for your router.

Syntax

ip 2ndsubnet <Enable/Disable>

Syntax Description

Parameter	Description
<i>Enable</i>	Enable the function.
<i>Disable</i>	Disable the function.

Example

```
> ip 2ndsubnet enable
2nd subnet enabled!
```

Telnet Command: ip pubaddr

This command allows to set the **IP routed subnet** for the router.

Syntax

ip pubaddr ?

ip pubaddr <public subnet IP address>

Syntax Description

Parameter	Description

?	Display an IP address which allows users set as the public subnet IP address.
<i>public subnet IP address</i>	Specify an IP address. The system will set the one that you specified as the public subnet IP address.

Example

```
> ip pubaddr ?
% ip addr <public subnet IP address>
% Now: 192.168.0.1

> ip pubaddr 192.168.2.5
% Set public subnet IP address done !!!
```

Telnet Command: ip pubmask

This command allows users to set the mask for IP routed subnet of your router.

Syntax

ip pubmask ?

ip pubmask *<public subnet mask>*

Syntax Description

Parameter	Description
?	Display an IP address which allows users set as the public subnet mask.
<i>public subnet IP address</i>	Specify a subnet mask. The system will set the one that you specified as the public subnet mask.

Example

```
> ip pubmask ?
% ip pubmask <public subnet mask>
% Now: 255.255.255.0

> ip pubmask 255.255.0.0
% Set public subnet mask done !!!
```

Telnet Command: ip lanalias

This command is used for configuring WAN IP Alias.

Syntax

ip lanalias *[idx] [option]*

Syntax Description

Parameter	Description
<i>[idx]</i>	It means the index number of the profile. Idx: 1 to 5
<i>[option]</i>	The available commands with parameters are listed below.

-e <0/1>	It means to enable / disable the function of .. 0: disable 1: enable
-a <IP address>	It means to set auxiliary IP address.
-w n	It means to add an address for the selected WAN interface. N=0, none N=1, means WAN1 N=2, means WAN2 ...
-r	It means to remove the address of the selected WAN interface.

Example

```
> ip lanalias 1 -r
> ip lanalias 1 -e 1
> ip lanalias 1 -a 192.168.1.121
```

When you type *ip lanalias?*, the current auxiliary WAN IP Address table will be shown as the following:

Index no.	Status	IP address	IP pool

1	Enable	172.16.3.229	Yes
2	Enable	172.16.3.56	No
3	Enable	172.16.3.113	No

Telnet Command: ip addr

This command allows users to set/add a specified LAN IP your router.

Syntax

ip addr [*IP address*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.

Example

```
>ip addr 192.168.50.1
% Set IP address OK !!!
```

Info

When the LAN IP address is changed, the start IP address of DHCP server are still the same. To make the IP assignment of the DHCP server being consistent with this new IP address (they should be in the same network segment), the IP address of the PC must be fixed with the same LAN IP address (network segment) set by this command for accessing into the web user interface of the router. Later, modify the start addresses for the DHCP server.

Telnet Command: ip nmask

This command allows users to set/add a specified netmask for your router.

Syntax

ip nmask [*IP netmask*]

Syntax Description

Parameter	Description
<i>IP netmask</i>	It means the netmask of LAN IP.

Example

```
> ip nmask 255.255.0.0
% Set IP netmask OK !!!
```

Telnet Command: ip arp

ARP displays the matching condition for IP and MAC address.

Syntax

ip arp add [*IP address*] [*MAC address*] [*LAN or WAN*]

ip arp del [*IP address*] [*LAN or WAN*]

ip arp flush

ip arp status

ip arp accept [*0/1/2/3/4/5status*]

ip arp setCacheLife [*time*]

In which, **arp add** allows users to add a new IP address into the ARP table; **arp del** allows users to remove an IP address; **arp flush** allows users to clear arp cache; **arp status** allows users to review current status for the arp table; **arp accept** allows to accept or reject the source /destination MAC address; **arp setCacheLife** allows users to configure the duration in which ARP caches can be stored on the system. If **ip arp setCacheLife** is set with "60", it means you have an ARP cache at 0 second. Sixty seconds later without any ARP messages received, the system will think such ARP cache is expired. The system will issue a few ARP request to see if this cache is still valid.

Syntax Description

Parameter	Description
<i>IP address</i>	It means the LAN IP address.
<i>MAC address</i>	It means the MAC address of your router.
<i>LAN or WAN</i>	It indicates the direction for the arp function.
<i>0/1/2/3/4/5</i>	0: disable to accept illegal source mac address 1: enable to accept illegal source mac address 2: disable to accept illegal dest mac address 3: enable to accept illegal dest mac address 4: Decline VRRP mac into arp table 5: Accept VRRP mac into arp table status: display the setting status.
<i>Time</i>	Available settings will be 10, 20, 30,...2550 seconds.

Example

```
> ip arp accept status
Accept illegal source mac arp: disable

Accept illegal dest mac arp: disable

Accept VRRP mac into arp table: disable
> ip arp status
[ARP Table]
  Index IP Address      MAC Address      Netbios Name
  1    192.168.1.113    00-05-5D-E4-D8-EE  A1000351
```

Telnet Command: ip dhcpc

This command is available for WAN DHCP.

Syntax

ip dhcpc *option*

ip dhcpc *option -h|l*

ip dhcpc *option -d [idx]*

ip dhcpc *option -e [1 or 0] -w [wan unnumber] -c [option number] -v [option value]*

ip dhcpc *option -e [1 or 0] -w [wan unnumber] -c [option number] -x [option value]*

ip dhcpc *option -e [1 or 0] -w [wan unnumber] -c [option number] -a [option value]*

ip dhcpc *option -u [idx unnumber]*

ip dhcpc *release [wan number]*

ip dhcpc *renew [wan number]*

ip dhcpc *status*

Syntax Description

Parameter	Description
<i>option</i>	It is an optional setting for DHCP server. -h: display usage -l: list all custom set DHCP options -a: set option value by address list -c: set option number: 0~255 -d: delete custom dhcp client option by index number -e: enable/disable option feature, 1:enable, 0:disable -u: update by index number -v: set option value by string -w: set WAN number (e.g., 1=WAN1) -x: set option value by raw byte (hex)
<i>release</i>	It means to release current WAN IP address.
<i>renew</i>	It means to renew the WAN IP address and obtain another new one.
<i>status</i>	It displays current status of DHCP client.

Example

```
> ip dhcpc option -e 1 -w 1/2 -c 18 -v /path1
> ip dhcpc option -e 0 -w 2/6/7 -c 18 -x 2f70617468
```

% DHCP client option number and wan settings are duplicate!

```
> ip dhcpc option -e 0 -w 3/6/7 -c 18 -x 2f70617468
> ip dhcpc status
```

=====

WAN1:

DHCP Client Status: None active DHCP client!

=====

WAN2:

DHCP Client Status: None active DHCP client!

=====

WAN3:

DHCP Client Status: None active DHCP client!

=====

WAN4:

DHCP Client Status: None active DHCP client!

=====

WAN5:

DHCP Client Status: None active DHCP client!

=====

WAN6:

WAN21: <Virtual WAN>

DHCP Client Status: None active DHCP client!

=====
WAN22: <Virtual WAN>

DHCP Client Status: None active DHCP client!

=====
WAN23: <Virtual WAN>

DHCP Client Status: None active DHCP client!
```

Telnet Command: ip ping

This command allows users to ping IP address of WAN1/WAN2 for verifying if the WAN connection is OK or not.

Syntax

ip ping [*IP address*] [*AUTO/WAN1/WAN2*] [*Source IP Address*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the WAN IP address.
<i>AUTO/WAN1/WAN2</i>	It means the WAN port that the above IP address passes through.

Example

```
>ip ping 172.16.3.229 WAN1
Pinging 172.16.3.229 with 64 bytes of Data:
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Receive reply from 172.16.3.229, time=0ms
Packets: Sent = 5, Received = 5, Lost = 0 <0% loss>
```

Telnet Command: ip tracert

This command allows users to trace the routes from the router to the host.

Syntax

ip tracert [*Host/IP address*] [*WAN1/WAN2/WAN3/WAN4/WAN5/WAN6/WAN7*] [*Udp/Icmp*]

Syntax Description

Parameter	Description
<i>IP address</i>	It means the target IP address.
<i>WAN1/WAN2/WAN3/WAN4/WAN5/WAN6/WAN7</i>	It means the WAN port that the above IP address passes through.
<i>Udp/Icmp</i>	It means the UDP or ICMP.

Example

```
>ip tracert 22.128.2.62 WAN1
Traceroute to 22.128.2.62, 30 hops max
 1  172.16.3.7  10ms
 2  172.16.1.2  10ms
 3  Request Time out.
 4  168.95.90.66 50ms
 5  211.22.38.134 50ms
 6  220.128.2.62 50ms
Trace complete
```

Telnet Command: ip telnet

This command allows users to access specified device by telnet.

Syntax

ip telnet [*IP address*][*Port*]

Syntax Description

Parameter	Description
<i>IP address</i>	Enter the WAN or LAN IP address of the remote device.
<i>Port</i>	Type a port number (e.g., 23). Available settings: 0 ~65535.

Example

```
> ip telnet 172.17.3.252 23
>
```

Telnet Command: ip rip

This command allows users to set the RIP (routing information protocol) of IP.

Syntax

ip rip [*0/1/2*]

Syntax Description

Parameter	Description
<i>0/1/2</i>	0 means disable; 1 means first subnet and 2 means second subnet.

Example

```
> ip rip 1
%% Set RIP 1st subnet.
```

Telnet Command: ip wanrip

This command allows users to set the RIP (routing information protocol) of WAN IP.

Syntax

ip wanrip [*ifno*] **-e** [*0/1*]

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. 1: WAN1, 2: WAN2, 3: PVC3, 4: PVC4, 5: PVC5 Note: PVC3 ~PVC5 are virtual WANs.
-e	It means to disable or enable RIP setting for specified WAN interface. 1: Enable the function of setting RIP of WAN IP.

0: Disable the function.

Example

```
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol disable
WAN[6] Rip Protocol enable
WAN[7] Rip Protocol enable
> ip wanrip 5 -e 1
> ip wanrip ?
Valid ex:ip wanrip <ifno> -e <0/1>
<ifno> 1: WAN1,2: WAN2
       3: PVC3,4: PVC4,5: PVC5
-e <0/1> 0: disable, 1: enable
Now status:
WAN[1] Rip Protocol disable
WAN[2] Rip Protocol disable
WAN[3] Rip Protocol disable
WAN[4] Rip Protocol disable
WAN[5] Rip Protocol enable
```

Telnet Command: ip route

This command allows users to set static route.

Syntax

ip route add [*dst*] [*netmask*][*gateway*][*ifno*][*rtype*]

ip route del [*dst*] [*netmask*][*rtype*]

ip route status

ip route cnc

ip route tel

ip route default [*wan1/wan2/off/?*]

ip route clean [*1/0*]

Syntax Description

Parameter	Description
<i>add</i>	It means to add an IP address as static route.
<i>del</i>	It means to delete specified IP address.
<i>status</i>	It means current status of static route.
<i>dst</i>	It means the IP address of the destination.
<i>netmask</i>	It means the netmask of the specified IP address.
<i>gateway</i>	It means the gateway of the connected router.
<i>ifno</i>	It means the connection interface. 3=WAN1 4=WAN2 5=WAN3, 6=WAN4, 7=WAN5 However, WAN3, WAN4, WAN5 are router-borne WANs.
<i>rtype</i>	It means the type of the route. default : default route; static: static route.
<i>cnc</i>	It means current IP range for CNC Network.
<i>tel</i>	It means to display current IP range for China Telecom Network.
<i>default</i>	Set WAN1/WAN2/off as current default route.
<i>clean</i>	Clean all of the route settings. 1: Enable the function. 0: Disable the function.

Example

```
> ip route add 172.16.2.0 255.255.255.0 172.16.2.4 3 static
> ip route status

Codes: C - connected, S - static, R - RIP, * - default, ~ - private
C~      192.168.1.0/    255.255.255.0 is directly connected, LAN1
S       172.16.2.0/    255.255.255.0 via 172.16.2.4, WAN1
```

Telnet Command: ip igmp_proxy

This command allows users to enable/disable igmp proxy server.

Syntax

```
ip igmp_proxy set
ip igmp_proxy reset
ip igmp_proxy wan
ip igmp_proxy query
ip igmp_proxy ppp [0/1]
ip igmp_proxy status
ip igmp_proxy version
ip igmp_proxy syslog
```

Syntax Description

Parameter	Description
<i>set</i>	It means to enable proxy server.
<i>reset</i>	It means to disable proxy server.
<i>wan</i>	It means to specify WAN interface for IGMP service.
<i>t_home</i>	It means to specify t_home proxy server for using.
<i>On/off/show/help</i>	It means to turn on/off/display or get more information of the T_home service.
<i>query</i>	It means to set IGMP general query interval. The default value is 125000 ms.
<i>ppp <0/1></i>	0 - No need to set IGMP with PPP header. 1 - Set IGMP with PPP header.
<i>status</i>	It means to display current status for proxy server.
<i>version <v2, v3, auto, show></i>	It means to specify the IGMP version. V2, v3, auto, show
<i>Syslog <0/1></i>	Make IGMP log be recorded on syslog. 0: disable 1: enable

Example

```
> ip igmp t_home on
%T-Home Setting:
%T-Home Service is turned on.
%WAN1 : Enabled, connection type: PPPoE, without tag for ADSL
%WAN5 : Enabled, connection type: DHCP, tag: 8
%: PVC4(WAN5) is bound to PVC0(WAN1), protocol=MPoA 1483 Bridge
%IGMP Proxy Interface: WAN5(PVC)
%WAN5 for Router-borne Application/ IPTV on/off: ON
> ip igmp_proxy query 130000
This command is for setting IGMP General Query Interval
The default value is 125000 ms
Current Setting is:130000 ms
>
```

Telnet Command: ip igmp_snoop

This command allows users to enable or disable IGMP snoop function.

Syntax

ip igmp_snoop enable
ip igmp_snoop disable
ip igmp_snoop status
ip igmp_snoop table
ip igmp_snoop txquery <on/off> <v2/v3>

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable igmp snoop function
<i>disable</i>	It means to disable igmp snoop function.
<i>status</i>	It means to display current igmp configuration.
<i>table</i>	Displays the current setting of IGMP Snoop.
<i>txquery <on/off> <v2/v3></i>	It means to send out IGMP QUERY to LAN periodically. On: enable Off: disable v2: version v2 v3: version v3

Example

```

> ip igmp_snoop enable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Enabled.
> ip igmp_snoop disable
%% ip igmp snooping [enable|disable|status], IGMP Snooping is Disabled.
> ip igmp_snoop txquery on
igmp snoop txquery v2 is ON now.
it will send out IGMP QUERY to LAN priodic.

```

Telnet Command: ip session

This command allows users to set maximum session limit number for the specified IP; set message for exceeding session limit and set how many seconds the IP session block works.

Syntax

ip session on
ip session off
ip session default [num]
ip session defaulttp2p [num]
ip session status
ip session show
ip session timer [num]
ip session [block/unblock][IP]
ip session [add/del][IP1-IP2][num][p2pnum]

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.

<i>off</i>	It means to turn off session limit for each IP.
<i>default [num]</i>	It means to set the default number of session num limit.
<i>DefaultIp2p [num]</i>	It means to set the default number of session num limit for p2p.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all session limit settings in the IP range.
<i>timer [num]</i>	It means to set when the IP session block works. The unit is second.
<i>[block/unblock][IP]</i>	It means to block/unblock the specified IP address. Block: The IP cannot access Internet through the router. Unblock: The specified IP can access Internet through the router.
<i>add</i>	It means to add the session limits in an IP range.
<i>del</i>	It means to delete the session limits in an IP range.
<i>IP1-IP2</i>	It means the range of IP address specified for this command.
<i>num</i>	It means the number of the session limits, e.g., 100.
<i>p2pnnum</i>	It means the number of the session limits, e.g., 50 for P2P.

Example

```
> ip session default 100
> ip session add 192.168.1.5-192.168.1.100 100 50
> ip session on
> ip session status

IP range:
    192.168.1.5 - 192.168.1.100 : 100

Current ip session limit is turn on

Current default session number is 100
```

Telnet Command: ip bandwidth

This command allows users to set maximum bandwidth limit number for the specified IP.

Syntax

ip bandwidth *on*

ip bandwidth *off*

ip bandwidth *default* <tx_rate><rx_rate>

ip bandwidth *status*

ip bandwidth *show*

ip bandwidth *routing* <on/off>

ip bandwidth *schedule* <s1> <s2> <s3> <s4>

ip bandwidth <add/del> <IP1-IP2> <tx> <rx> <shared>

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on the IP bandwidth limit.
<i>off</i>	It means to turn off the IP bandwidth limit.
<i>default</i> <tx_rate><rx_rate>	It means to set default tx and rx rate of bandwidth limit. The range is from 0 – 65535 Kpbs.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all the bandwidth limits settings within the IP range.
<i>routing</i> <on/off>	on/off: Apply (on) or not apply (off) to the IP Routed Subnet.
<i>schedule</i> <s1> <s2> <s3> <s4>	Set the schedule profile. <s1> <s2> <s3> <s4>: Specify the profile index number. Up to four profiles can be set at one time. Available profiles numbers range from 1 to 16.
<add/del> <IP1-IP2> <tx> <rx> <shared>	Add/del: Add or delete the bandwidth within the IP range. IP1-IP2: Set the range of IP address specified for this command. tx: Set transmission rate for bandwidth limit. rx: set receiving rate for bandwidth limit. shared: the bandwidth will be shared for the IP range.

Example

```
> ip bandwidth default 200 800
> ip bandwidth add 192.168.1.50-192.168.1.100 10 60
> ip bandwidth status

IP range:
  192.168.1.50 - 192.168.1.100 : Tx:10K Rx:60K

Current ip Bandwidth limit is turn off
Auto adjustment is off
>
```

Telnet Command: ip bindmac

This command allows users to set IP-MAC binding for LAN host.

Syntax

ip bindmac on

ip bindmac off

ip bindmac strict_on

ip bindmac strict_off

ip bindmac add <IP> <MAC> <Comment>

ip bindmac del <IP/all>

ip bindmac subnet <all/set LAN_Index/unset LAN_Index/clear/show>

ip bindmac show

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on IP bandmac policy. Even the IP is not in the policy table, it can still access into network.
<i>off</i>	It means to turn off all the bindmac policy.
<i>strict_on</i>	It means that only those IP address in IP bindmac policy table can access into network.
<i>strict_off</i>	It means to turn off IP bindmac policy and only those IP can access network.
<i>add</i> <IP> <MAC> <Comment>	It means to add one ip bindmac. <IP>: Enter the IP address for binding with specified MAC address. <MAC>: Enter the MAC address for binding with the IP address specified. <Comment>: Enter words as a brief description.
<i>del</i> <IP/all>	It means to delete one IP bindmac. <IP>: Enter the IP address for binding with specified MAC address. <all>: It means to delete all the IP bindmac settings.
<i>subnet</i> <all/set LAN_Index/unset LAN_Index/clear/show>	It means to set the LAN subnet(s) for applying the rules of Bind IP to MAC all: Make all LAN subnets apply for the rules. set <LAN_Index>: Specify certain LAN subnet, e.g., set LAN2. unset <LAN_Index>: Remove certain LAN subnet by specifying the index number of LAN port, e.g., unset LAN3. clear: Remove all LAN subnets. show: Display current LAN subnet settings.
<i>show</i>	It means to display the IP address and MAC address of the pair of binded one.

Example

```
> ip bindmac add 192.168.1.46 00:50:7f:22:33:55 just for test
> ip bindmac show
```

```
ip bind mac function is turned OFF
ip bind mac function is STRICT OFF
Show all IP Bind MAC entries.
IP : 192.168.1.46 bind MAC : 00-50-7f-22-33-55 HOST ID :
    Comment : just
>
```

Telnet Command: ip bgp

Border Gateway Protocol (BGP) is a standardized protocol designed to exchange routing and reachability information among autonomous systems (AS) on the Internet.

Syntax

```
ip bgp mode <0/1>
ip bgp as <0~4294967295>
ip bgp hold <10~65535>
ip bgp retry <3~255>
ip bgp id <x.x.x.x>
ip bgp show
ip bgp neighbor <idx> mode <0/1>
ip bgp neighbor <idx> name <max len>
ip bgp neighbor <idx> ip <x.x.x.x>
ip bgp neighbor <idx> as <1~4294967295>
ip bgp neighbor <idx> weight <0~7>
ip bgp neighbor <idx> prepend <0~7>
ip bgp neighbor <idx> md5 <0/1>
ip bgp neighbor <idx> key <max len>
ip bgp neighbor <idx> show
ip bgp neighbor show all
ip bgp static <sid> <ip> <netmask>
ip bgp static <sid> delete
ip bgp static show
```

Syntax Description

Parameter	Description
<i>mode</i> <0/1>	Enable or disable the GMP. 0: disable 1: enable
<i>as</i> <0~4294967295>	Set the AS number for local router. <0~4294967295>
<i>hold</i> <10~65535>	Set the time interval (in seconds) to determine the peer is dead when the router is unable to receive any keepalive message from the peer within the time. <10~65535>: Default is 180 sec.
<i>retry</i> <3~255>	Set the BGP conntion retry time. <3~255>: Default is 120 sec
<i>id</i> <x.x.x.x>	Select a enabled local subnet IP as router ID. <x.x.x.x>: Enter an IP address.
<i>show</i>	Display all BGP settings.
<i>neighbor</i> <idx> <i>mode</i> <0/1>	Enable or disable the neighbor profile. <idx>: 1 to 8. Index number of the neighbor profile.

	0: disable 1: enable
<i>neighbor <idx> name <max len></i>	Set a name of the neighbor profile. <idx>: 1 to 8. Index number of the neighbor profile. <max len>: Enter a name (no more than 20 characters).
<i>neighbor <idx> ip <x.x.x.x></i>	Set the IP address for the specified neighbor profile. <idx>: 1 to 8. Index number of the neighbor profile. <x.x.x.x>: Enter an IP address (e.g., 192.168.1.33).
<i>neighbor <idx> as <1~4294967295></i>	Set an AS number for the specified neighbor profile. <idx>: 1 to 8. Index number of the profile. <1~4294967295>: Enter a number.
<i>neighbor <idx> weight <0~7></i>	Set the weight value for the specified neighbor profile. <idx>: 1 to 8. Index number of the neighbor profile. <0~7>: higher is better.
<i>neighbor <idx> prepend <0~7></i>	Set the prepend value for the specified neighbor profile. <idx>: 1 to 8. Index number of the neighbor profile. <0~7>: lower is better.
<i>neighbor <idx> md5 <0/1></i>	Enable or disable the MD5 authentication for the neighbor profile. <idx>: 1 to 8. Index number of the profile. 0: Disable. 1: Enable.
<i>neighbor <idx> key <max len></i>	Set the key used for the MD5 authentication. <idx>: 1 to 8. Index number of the neighbor profile. <max len>: Enter a name (no more than 20 characters).
<i>neighbor <idx> show</i>	Display the BGP setting for the specified neighbor profile. <idx>: 1 to 8. Index number of the profile.
<i>neighbor show all</i>	Display the BGP setting of neighbor profiles.
<i>static <sid> <ip> <netmask></i>	Set the IP address and subnet mask for specified static network profile. <sid>: 1 to 8. Index number of the static network profile. <ip>: Enter an IP address. <netmask>: Enter a netmask.
<i>static <sid> delete</i>	Remove / clear the settings for the selected static network profile. <sid>: 1 to 8. Index number of the profile.
<i>static show</i>	Display the BGP setting of static network profiles.

Example

```
> ip bgp id 255.255.255.0
Set BGP router id: 255.255.255.0
> ip bgp show
BGP is enable
Local autonomous system number: 33333
Hold time: 180
Connect retry time: 20
Router ID: 255.255.255.0
```

BGP neighbor:

Idx	Mode	As Number	Name	IP Addr	Status	weight
prepend						
1	En	0		Empty	None	0
2	Dis	0		Empty	None	0
3	Dis	0		Empty	None	0
4	Dis	0		Empty	None	0
5	Dis	0		Empty	None	0
6	Dis	0		Empty	None	0
7	Dis	0		Empty	None	0
8	Dis	0		Empty	None	0

BGP static networks:

Index: 8, IP addr: 192.168.2.56, mask: 255.255.255.254

Telnet Command: ip ospf

Users could use this command to configure OSPF (Open Shortest Path First) setting.

Syntax

ip ospf en

ip ospf dis

ip ospf status

ip ospf cfg show

ip ospf cfg set <idx> state <dis/en>

ip ospf cfg set <idx> area <value>

ip ospf cfg set <idx> lan <value>

ip ospf cfg set <idx> wan <value>

ip ospf nbr

Syntax Description

Parameter	Description
<i>en</i>	Enable the function of Open Short Path First.
<i>dis</i>	Disable the function of Open Short Path First.
<i>status</i>	Display interface status.
<i>cfg show</i>	Display configuration setting for all interfaces.
<i>cfg set <idx> state <dis/en></i>	Enable or disable the interface (LAN/WAN) setting. <idx>: 1 to 64. <dis/en>: disable or enable.
<i>cfg set <idx> area <value></i>	Set interface for area id: <idx>: 1 to 64. <value>: 1 to 2147483647.
<i>cfg set <idx> lan <value></i>	Set interface for LAN. <idx>: 1 to 64.

	<value>: 1 to 20.
<i>cfg set <idx> wan <value></i>	Set interface for WAN. <idx>: 1 to 64. <value>: 1 to 2.
<i>nbr</i>	Display interface neighbors.

Example

```
> ip ospf cfg set 1 state en
> ip ospf cfg set 1 area 100
> ip ospf cfg set 1 wan 1
> ip ospf cfg show
```

OSPF: Enable

```
-----
  Idx  State  Area_id  Interface  Auth  Key ID
    0    En    100      WAN_1     Dis   0
    1   Dis     0      LAN_1     Dis   0
    2   Dis     0      LAN_1     Dis   0
...
...
>
```

Telnet Command: ip maxnatuser

This command is used to set the maximum number of NAT users.

Syntax

ip maxnatuser *user no*

Syntax Description

Parameter	Description
<i>User no</i>	A number specified here means the total NAT users that Vigor router supports. 0 – It means no limitation.

Example

```
> ip maxnatuser 100
% Max NAT user = 100
```

Telnet Command: ip policy_rt

This command is used to set the IP policy route profile.

Syntax

ip policy_rt [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
<command><parameter>[...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
General Setup for Policy Route	
-i <value>	Specify an index number for setting policy route profile. Value: 1 to 60. "-1" means to get a free policy index automatically.
-e <0/1>	0: Disable the selected policy route profile. 1: Enable the selected policy route profile.
-o <value>	Determine the operation of the policy route. Value: add – Create a new policy route profile. del – Remove an existed policy route profile. edit – Modify an existed policy route profile. flush – Reset policy route to default setting.
-1 <any/range>	Specify the source IP mode. Range: Indicate a range of IP addresses. Any: It means any IP address will be treated as source IP address.
-2 <any/ip_range/ip_subnet/domain>	Specify the destination IP mode. Any: No need to specify an IP address for any IP address will be treated as destination IP address. ip_range: Indicates a range of IP addresses. ip_subnet: Indicates the IP subnet. domain: Indicates the domain name.

-3 <any/range>	Specify the destination port mode. Range: Indicate a range of port number. Any: It means any port number can be used as destination port.
-G <default/specific>	Specify the gateway mode.
-L <default/specific>	Specify the failover gateway mode.
-s <value>	Indicate the source IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.0)
-S <value>	Indicate the source IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.100)
-d <value>	Indicate the destination IP start. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.0)
-D <value>	Indicate the destination IP end. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.2.100)
-p <value>	Indicate the destination port start. Value: Type a number (1 ~ 65535) as the port start (e.g., 1000).
-P <value>	Indicate the destination port end. Value: Type a number (1 ~ 65535) as the port end (e.g., 2000).
-y <value>	Indicate the priority of the policy route profile. Value: Type a number (0 ~ 250). The default value is "150".
-I <value>	Indicate the interface specified for the policy route profile. Value: Available interfaces include, LAN1 ~ LAN8, IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN5, VPN_PROFILE_1 ~ VPN_PROFILE_100, WAN_1_IP_ALIAS_1 ~ WAN_4_IP_ALIAS_8
-g <value>	Indicate the gateway IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.3.1)
-I <value>	Indicate the failover IP address. Value: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.4.1)
-t <value>	It means "protocol". Value: Available settings include "TCP", "UDP", "TCP/UDP", "ICMP" and "Any".
-n <0/1>	Indicates the function of "Force NAT". 0: Disable the function. 1: Enable the function.
-a <0/1>	Indicates to enable the function of failover. 0: Disable the function. 1: Enable the function.
-f <value>	It means to specify the interface for failover. Value: Available interfaces include, NO_FAILOVER, Default_WAN, Policy1 ~ Policy60 LAN1 ~ LAN8 IP_Routed_Subnet, DMZ_Subnet, WAN1 ~ WAN5,

	VPN_PROFILE_1 ~ VPN_PROFILE_100, WAN_1_IP_ALIAS_1 ~ WAN_4_IP_ALIAS_8
-b <value>	It means "failback". Value: Available settings include, 0: Disable the function of "failback". 1: Enable the function of "failback".
-v	View current failback setting.
Diagnose for Policy Route	
-s <value>	It means "source IP". Value: Available settings include: Any: It indicates any IP address can be used as source IP address. "xxx.xxx.xxx.xxx": The type format (e.g, 192.168.1.0).
-d <value>	It means "destination IP". Value : Available settings include: Any: It indicates any IP address can be used as destination IP address. "xxx.xxx.xxx.xxx": Specify an IP address.
-p <value>	It means "destination port". Value: Specify a number or type Any (indicating any number).
-t <value>	It means "protocol". Value: Available settings include "ICMP", "TCP", "UDP" and "Any".

Example

```
> ip policy_rt diagnose -s 192.168.1.100 -d any -p any -t ICMP

-----
      Matched Route  (Priority)
-----
* No_Match

-----
      Matched Policy (Priority)
-----
* Policy_1 (200) [failovered!!]

* Conclusion:The packet was dropped because the send-to interface of the
mat
ched policy "policy 1" was inactive and there was no failover setting
> ip policy_rt -i -1 -o add -1 range -s 192.168.1.10 -S 192.168.1.20 -2
ip_range -d 202.211.100.10 -D 202.211.100.20 -g 202.211.100.1 -I WAN2
>
```

Telnet Command: ip lanDNSRes

This command is used to set LAN DNS profiles. With such feature, the user can configure some services (such as ftp, www or database) with domain name which is easy to be accessed.

Syntax

ip lanDNSRes [-<command> <parameter> | ...]

Syntax Description

Parameter	Description

-a <IP Address>	It is used to configure IP address mapping (IPv4/IPv6 Address or multiple subnet addresses). IP Address: type the IP address (e.g., 192.168.1.56).
-c <CNAME>	It is used to set CNAME. CNAME: Enter a string.
-d <address mapping index number>	It means to delete index number with address mapping configured. address mapping index number : type the index number which represents the address mapping profile.
-e <0/1>	It means to enable or disable the function of LAN DNS or DNS Forwarding Profile. 0: disable 1: enable
-i <profile setting index number>	It means to create LAN DNS profile with specified domain name. profile setting index number : type the index number which represents the profile with domain name configured.
-l	It means to list detailed information of profile configuration. > ip lanDNSRes -l % % Idx: 7 % State: Enable % Profile: DrayTekFTP % Domain Name: ftp.draytek.com % ----- Address Mapping Table ----- % Idx ReplyOnlySameSubnet IP Address % 1 Yes 172.16.2.10 % 2 Yes 172.16.3.10 % 3 Yes 172.16.4.10
-n<domain name>	It means to specify a domain name to be accessed.
-p<profile name>	It means to set name of the LAN DNS profile.
-r	It means to clear specified domain name profile and the address mapping setting.
-R	It means to set to factory default setting.
-s <0/1>	It means to determine all subnet packets or only the packets with the same subnet will be replied for address mapping profile. 0: reply all subnet packets. 1: reply only same subnet packet.
-z	It means to update LAN DNS configuration to DNS cache.

Example

```

> ip lanDNSRes -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip lanDNSRes -i 1 -a 172.16.2.10 -s 1
% Configure Set1's IP:172.16.2.10
% Configure Set1's Idx:1 ReplyOnlySameSubnet:Yes
> ip lanDNSRes -i 1 -a 172.16.3.10 -s 1
% Configure Set1's IP:172.16.3.10
% Configure Set1's Idx:2 ReplyOnlySameSubnet:Yes
> ip lanDNSRes -i 1 -a 172.16.4.10 -s 1
% Configure Set1's IP:172.16.4.10
% Configure Set1's Idx:3 ReplyOnlySameSubnet:Yes
> ip lanDNSRes -l
> ip lanDNSRes -l

```

```
%
% Idx: 7
% State: Enable
% Profile: DrayTekFTP
% Domain Name: ftp.draytek.com
% ----- Address Mapping Table -----
% Idx ReplyOnlySameSubnet IP Address
% 1 Yes 172.16.2.10
% 2 Yes 172.16.3.10
% 3 Yes 172.16.4.10
```

Telnet Command: ip dnsforward

This command is used to set LAN DNS profile for conditional DNS forwarding.

ip dnsforward [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-a <IP Address>	Set forwarded DNS server IP Address.
-d <DNS server mapping index number>	Delete the selected LAN DNS profile.
-e <0/1>	0: disable such function. 1: enable such function.
-i <profile setting index number>	Enter the index number of the profile.
-l	List the content of LAN DNS profile (including domain name, IP address and message).
-n <domain name>	Set domain name.
-p <profile name>	Set profile name for LAN DNS.
-r	Reset the settings for selected profile.
-R	Set to factory default settings.

Example

```
> ip dnsforward -i 1 -n ftp.drayTek.com
% Configure Set1's DomainName:ftp.drayTek.com
> ip dnsforward -i 1 -a 172.16.1.1
% Configure Set1's IP:172.16.1.1
> ip dnsforward -i 1 -l
```

```
% Idx: 1
% State: Disable
% Profile: test
% Domain Name: ftp.drayTek.com
% DNS Server IP: 172.16.1.1
>
```

Telnet Command: ip spoofdef

This command is used to enable/disable the IP Spoofing Defense.

Syntax

ip spoofdef <WAN/LAN><0/1>

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<WAN/LAN>	It means to block IP packet from WAN/LAN with inconsistent source IP address.
<0/1>	0: Disable the function. 1: Enable the function.

Example

```
> ip spoofdef WAN 0
% Setting saved:
> ip spoofdef LAN 1
Setting saved:
DrayTek> ip spoof def ?
Invalid Parameter
IP Spoofing Defense Usage:
Set IP Spoofing Defense: spoofdef <WAN/LAN> <0/1>
Ex: "spoofdef WAN 1" to block IP packet from WAN with inconsistent source IP
address
Current setting:
Block IP packet from WAN with inconsistent source IP address : Disable
Block IP packet from LAN with inconsistent source IP address : Enable
```

Telnet Command: ip6 addr

This command allows users to set the IPv6 address for your router.

Syntax

ip6 addr -s <prefix> <prefix-length> <LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/
USB1/USB2/VPN1/..VPN200>

ip6 addr -d <prefix> <prefix-length> <LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/
USB1/USB2/VPN1/..VPN200>

ip6 addr -a <LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2/VPN1/..VPN200>
-u

ip6 addr -v <LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 addr -t <old-prefix><old-prefix-length><new-prefix> <new-prefix-length>
<LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 addr -o <1/2>

ip6 addr -o 3 <prefix> <prefix-length> <WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 addr -l <prefix> <prefix-length> <LAN1/..LAN20>

ip6 addr <-p/-b> <prefix> <prefix-length> <WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 addr -x <LAN1/..LAN20 >

ip6 addr -c <LAN1/..LAN20>

ip6 addr -e <type> < LAN1/..LAN20>

Syntax Description

Parameter	Description
-s <prefix> <prefix-length> < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/ USB1/USB2/VPN1/..VPN200>	It means to add a static ipv6 address. <prefix>: It means to enter the prefix number of IPv6 address. <prefix-length>: It means to enter a fixed value as the length of the prefix. <<LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2/VPN1/..VPN200>>: It means to specify LAN/WAN/USB/VPN interface for such address.
-d <prefix> <prefix-length> < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/ USB1/USB2/VPN1/..VPN200>	It means to delete an ipv6 address. <prefix>: It means to enter the prefix number of IPv6 address. <prefix-length>: It means to enter a fixed value as the length of the prefix. < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2/VPN1/..VPN200>: It means to specify LAN/WAN/USB/VPN interface for such address.
-a < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/USB1/USB2/VPN1/..V PN200> -u	It means to show current address(es) status. < LAN1/..LAN20/ WAN1/WAN2/WAN3/ WAN4/WAN5/ USB1/USB2/VPN1/..VPN200>: It means to specify LAN/WAN/USB/VPN interface. <-u>: It means to show unicast address only.
-v < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/USB1/USB2>	It means to show prefix list status.
-t <old-prefix><old-prefix-length><new-prefix> <new-prefix-length> < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/USB1/USB2>	It means to update WAN static IPv6 address table. <old-prefix>: It means to enter the prefix number of IPv6 address. <old prefix-length>: It means to enter a fixed value as the length of the prefix. <new-prefix>: It means to enter the prefix number of IPv6 address. <new-prefix-length>: It means to enter a fixed value as the length of the prefix. < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>: It

	means to specify LAN/WAN/USB interface for such address.
-o <1/2>	<1>: It means to show old prefix list. <2>: It means to send old prefix option by RA.
-o <3> <prefix> <prefix-length> < WAN1/WAN2/WAN3/WAN4/ WAN5/USB1/USB2>	<3>: It means to set old prefix. <prefix>: It means to enter the prefix number of IPv6 address. <prefix-length>: It means to enter a fixed value as the length of the prefix. < WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>: It means to specify a WAN/USB interface for such address.
-l <prefix> <prefix-length> < LAN1/..LAN20>	It means to add a ULA. <prefix>: It means to enter the prefix number of IPv6 address. <prefix-length>: It means to enter a fixed value as the length of the prefix. <LAN1/..LAN20>: It means to specify a LAN interface for such address.
-p/-b <prefix> <prefix-length> < WAN1/WAN2/WAN3/WAN 4/WAN5/USB1/USB2>	It means to add/delete an prefix to/from prefix list. p: Add a prefix to a prefix list. b: Delete a prefix from a prefix list. <prefix>: It means to enter the prefix number of IPv6 address. <prefix-length>: It means to enter a fixed value as the length of the prefix. <WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2 >: It means to specify a WAN/USB interface for such address.
-x <LAN1/..LAN20>	It means to generate a ULA automatically. <LAN1/..LAN20>: It means to specify a LAN interface.
-c <LAN1/..LAN20>	It means to delete a ULA . <LAN1/..LAN20>: It means to specify a LAN interface.
-e <type> <LAN1/..LAN20>	It means to set ULA type. <type>: 0, disable; 1, static; 2, auto <LAN1/..LAN20>: It means to specify a LAN interface.

Example

```
> ip6 addr -a
DMZ
Unicast Address:
FE80::1649:BCFF:FE0D:1F48/64 (Link)
Multicast Address:
FF02::1:FF00:0
FF02::1:FF0D:1F48
FF02::1
LAN20
Unicast Address:
FE80::1649:BCFF:FE0D:1F48/64 (Link)
Multicast Address:
FF02::1:FF00:0
FF02::1:FF0D:1F48
```

```

FF02::1
LAN19
Unicast Address:
FE80::1649:BCFF:FE0D:1F48/64 (Link)
Multicast Address:
FF02::1:FF00:0
FF02::1:FF0D:1F48
FF02::1
LAN18
Unicast Address:
....

```

Telnet Command: ip6 dhcp req_opt

This command is used to configure option-request settings for DHCPv6 client.

Syntax

ip6 dhcp req_opt <LAN1|LAN2|...|LAN20|WAN1|...|WAN5|USB1|USB2> [-<command>
<parameter>| ...]

Syntax Description

Parameter	Description
<i>req_opt</i>	It means option-request.
<i>LAN1 LAN2 ... LAN20 WAN1 ... WAN5 USB1 USB2</i>	It means to specify LAN or WAN interface for such address.
<i>[<command> <parameter> ...]</i>	The available commands with parameters are listed below. <i>[...]</i> means that you can Enter several commands in one line.
<i>-a</i>	It means to show current DHCPv6 status.
<i>-s</i>	It means to ask the SIP.
<i>-S</i>	It means to ask the SIP name.
<i>-d</i>	It means to ask the DNS setting.
<i>-D</i>	It means to ask the DNS name.
<i>-n</i>	It means to ask NTP.
<i>-i</i>	It means to ask NIS.
<i>-I</i>	It means to ask NIS name.
<i>-p</i>	It means to ask NISP.
<i>-P</i>	It means to ask NISP name.
<i>-b</i>	It means to ask BCMCS.
<i>-B</i>	It means to ask BCMCS name.
<i>-r</i>	It means to ask refresh time.

<i>Parameter</i>	1: the parameter related to the request will be displayed. 0: the parameter related to the request will not be displayed.

Example

```
> ip6 dhcp req_opt WAN2 -S 1
> ip6 dhcp req_opt WAN2 -r 1
> ip6 dhcp req_opt WAN2 -a
% Interface WAN2 is set to request following DHCPv6 options:
%   sip name
>
```

Telnet Command: ip6 dhcp client

This command allows you to use DHCPv6 protocol to obtain IPv6 address from server.

Syntax

ip6 dhcp client <WAN1|...|WAN5|USB1|USB2> [-<command> <parameter>| ...]

Syntax Description

Parameter	Description
<i>client</i>	It means the dhcp client settings.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-r	It means to send RELEASE MESSAGE.
-p [IAID]	It means to request identity association ID for Prefix Delegation.
-n [IAID]	It means to request identity association ID for Non-temporary Address.
-t <time>	It means to set solicit interval. <time>: 0 ~ 7 seconds (default value is 0).
-c <parameter>	It means to send rapid commit to server. 1: Enable 0: Disable
-i <parameter>	It means to send information request to server. 1: Enable 0: Disable
-e <parameter>	It means to enable or disable the DHCPv6 client. 1: Enable 0: Disable
-m <parameter>	It means to enable/disable server DUID set by Link layer and time. 1: Enable 0: Disable
-d	It means to display the client DUID.
-A <parameter>	It means to set authentication protocol. 0: Undefine 2: delayed protocol
-R <parameter>	It means to set realm value (max: 31 characters) in delayed protocol.

	<parameter>: Enter a string.
-S <parameter>	It means to set shared secret (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
-K <parameter>	It means to set key ID (1~65535) in delayed protocol. <parameter>: Enter a number.

Example

```

> ip6 dhcp client WAN2 -p 2008::1
> ip6 dhcp client WAN2 -a
  Interface WAN2 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_PD whose IAID equals to 2008
> ip6 dhcp client WAN2 -n 1023456
> ip6 dhcp client WAN2 -a
  Interface WAN2 has following DHCPv6 client settings:
    DHCPv6 client enabled
    request IA_NA whose IAID equals to 2008
> system reboot

```

Telnet Command: ip6 dhcp server

This command allows you to configure DHCPv6 server.

Syntax

ip6 dhcp server [-<command> <parameter>| ...]

Syntax Description

Parameter	Description
server	It means the dhcp server settings.
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-a	It means to show current DHCPv6 status.
-b	It means to show current DHCPv6 IP assignment table.
-n <name>	It means to set a pool name.
-c <parameter>	It means to send rapid commit to server. 1: Enable 0: Disable
-e <parameter>	It means to enable or disable the DHCPv6 server. 1: Enable 0: Disable
-t <time>	It means to set prefer lifetime.
-y <time>	It means to set valid lifetime.
-u <time>	It means to set T1 time.
-o <time>	It means to set T2 time.

<i>-i <pool_min_addr></i>	It means to set the start IPv6 address of the address pool.
<i>-x <pool_max_addr></i>	It means to set the end IPv6 address of the address pool.
<i>-R</i>	It means to send reconfigure packet to the client.
<i>-r <0/1></i>	It means to disable (0) or enable (1) the auto range.
<i>-N <0/1></i>	It means to disable (0) or enable (1) the random address allocation.
<i>-d <addr></i>	It means to set the first DNS IPv6 address. <addr> : Enter an IPv6 address.
<i>-D <addr></i>	It means to set the second DNS IPv6 address. <addr> : Enter an IPv6 address.
<i>-m <1/0></i>	It means to enable(1) or disable (0) the server DUID set by Link Layer and Time.
<i>-q <name></i>	It means to set DNS domain search list. <name>: Enter a name.
<i>-z <0/1></i>	It means to disable (0) or enable (1) the DHCP PD.
<i>pdadd <suffix> <prefix_len> <client linklocal><client DUID></i>	It means to add PD node.
<i>pddel <PD index></i>	It means to delete PD node. <PD index>: Enter a number.
<i>-A <parameter></i>	It means to set authentication protocol. <parameter>: Enter 0, 2 or 3. 0: Undefine 2: delayed protocol 3: Reconfigure key
<i>-M <parameter></i>	It means to set realm value (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
<i>-S <parameter></i>	It means to set shared secret (max: 31 characters) in delayed protocol. <parameter>: Enter a string.
<i>-K <parameter></i>	It means to set key ID (1~65535) in delayed protocol. <parameter>: Enter a number.

Example

```
> ip6 dhcp server -d FF02::1
> ip6 dhcp server -i ff02::1
> ip6 dhcp server -x ff02::3
> ip6 dhcp server -a
% Interface LAN has following DHCPv6 server settings:
%   DHCPv6 server disabled
%   maximum address of the pool: FF02::3
%   minimum address of the pool: FF02::1
%   1st DNS IPv6 Addr: FF02::1
```

Telnet Command: ip6 internet

This command allows you to configure settings for accessing Internet.

Syntax

ip6 internet *-W n -M n [-<command> <parameter> | ...]*

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-W n	W means to set WAN interface and n means different selections. Default is WAN1. n=1: WAN1 n=2: WAN2 n=3: WAN3 . . n=X: WANx
-M n	M means to set Internet Access Mode (Mandatory) and n means different modes (represented by 0 – 5) n= 0: Offline, n=1: PPP, n=2: TSPC, n=3: AICCU, n=4: DHCPv6, n=5: Static n=6:6in4-Static n=7:6rd
-m n	It means to set IPv6 MTU. N = any value (0 means “unspecified”).
6rd	
-C <n>	It means to set 6rd connection mode. n=0: Auto n=1: Static
-s <server>	It means to set 6rd IPv4 Border Relay. <server>: Enter a string.
-m <n>	It means to set 6rd IPv4 address mask length. <n>: Enter a number.
-p <prefix>	It means to set IPv6 prefix for 6rd connection. <prefix>: Enter a prefix number of IPv6 address.
-l <n>	It means to set the prefix length for 6rd connection. <n>: It means to enter a fixed value as the length of the prefix.
6in4	
-s <server>	It means to set 6in4 remote endpoint IPv4 address.
-l <IPv6 Addr>	It means to set the IPv6 address for 6in4 connection.
-P <n>	It means to set IPv6 WAN prefix length for 6in4 connection.
-p <prefix>	It means to set 6in4 LAN Routed Prefix.
-l <n>	It means to set 6in4 LAN Routed Prefix length.
-T <n>	It means to set 6in4 Tunnel TTL.
TSPC/AICCU	
-u <username>	It means to set username (max. 63 characters). <username>: Enter a string.
-P <password>	It means to set Password (max. 63 characters).

	<password>: Enter a password.
-s <server>	It means to set Tunnel Server IP. <server>: Enter an IPv4 Address or URL (max. 63 characters)
<i>AICCU</i>	
-p <prefix>	It means to set Subnet Prefix (AICCU). <prefix>: Enter a prefix number of IPv6 address.
-l <n>	It means to set Subnet Prefix length (AICCU). <n>: Enter a number.
-o <1/0>	It means to set AICCU always on. 1: on 0: off
-f	It means to set AICCU tunnel ID.
<i>Static</i>	
-w <addr>	It means to set Default Gateway. <addr>: Enter an IPv6 address.
<i>Others</i>	
-d <server>	It means to set 1st DNS Server IP. <server>: Enter an IPv6 address.
-D <server>	It means to set 2nd DNS Server IP. <server>: Enter an IPv6 address.
-t <dhcp/ra/none>	It means to set ipv6 PPP WAN test mode for DHCP or RA. <dhcp/ra/none> : Enter dhcp, ra or none.
-V	It means to view IPv6 Internet Access Profile.
-k	It means to dial the Tunnel on the WAN.
-j	It means to drop the Tunnel on the WAN.
-r n	It means to set Prefix State Machine RA timeout.
-c n	It means to set Prefix State Machine DHCPv6 Client timeout.
-q <0/1/2>	It means to set WAN detection mode. 0: NS Detect 1: Ping Detect 2: Always On
-z <value>	It means to set Ping Detect TTL (0-255). <value>: Enter 0~255.
-x <hostname/ IPv6 addr>	It means to set Ping Detect Host (hostname or IPv6 address). <hostname/ipv6 addr> : Enter a hostname or an IPv6 address.
-i <value>	It means to set ipv6 connection interval. <value>: Enter a number (1500-60000 (unit:10ms)).
-b <0/1>	It means to enable DNSv6 based on DHCPv6. 1 = on 0 = off
-R <0/1>	It means to Enable RIPng. 1 = on 0 = off

Example

```
> ip6 internet -W 2 -M 2 -u 88886666 -p draytek123456 -s amsterdam.freenet6.net
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> system reboot
```

Telnet Command: ip6 neigh

This command allows you to display IPv6 neighbour table.

Syntax

ip6 neigh -s <inet6_addr> <eth_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 neigh -d <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2>

ip6 neigh -a <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2>

Syntax Description

Parameter	Description
-s <inet6_addr> <eth_addr> < LAN1/..LAN20/ WAN1/WAN2/WAN3/WAN4/ WAN5/ USB1/USB2>	It means to add a neighbour. <inet6_addr>: Enter an IPv6 address. <eth_addr>: Enter a submask address. < LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2>: Specify an interface for the neighbor.
-d <inet6_addr> < LAN1/..LAN20/WAN1/WAN2 /WAN3/WAN4/WAN5/ USB1/USB2>	It means to delete a neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2>: Specify an interface for the neighbor.
-a <inet6_addr> < LAN1/..LAN20/WAN1/WAN2 /WAN3/WAN4/WAN5/ USB1/USB2>	It means to show neighbour status. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/ USB1/USB2>: Specify an interface for the neighbor.

Example

```
> ip6 neigh -s 2001:2222:3333::1111 00:50:7F:11:ac:22:WAN2
    Neighbour 2001:2222:3333::1111 successfully added!
> ip6 neigh -a

Telnet Command: ip6 pneighbor

This command allows you to add a proxy neighbour.

Syntax

ip6 pneighbor -s <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 pneighbor -d <inet6_addr><LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

ip6 pneighbor -a <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>

Syntax Description

Parameter	Description
-s <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>	It means to add a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>: Specify an interface for the proxy neighbor.
-d <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>	It means to delete a proxy neighbour. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>: Specify an interface for the proxy neighbor.
-a <inet6_addr> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>	It means to show proxy neighbour status. <inet6_addr>: Enter an IPv6 address. <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2>: Specify an interface for the proxy neighbor.

Example

```
> ip6 neigh -s FE80::250:7FFF:FE12:300 LAN
%      Neighbour FE80::250:7FFF:FE12:300 successfully added!
```

Telnet Command: ip6 route

This command allows you to

Syntax

ip6 route -s <prefix> <prefix-length> <gateway> <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2/VPN1/..VPN200> <-D>

ip6 route -d <prefix> <prefix-length>

ip6 route -a <LAN1/..LAN20/WAN1/WAN2/WAN3/WAN4/WAN5/USB1/USB2/VPN1/..VPN200>

ip6 route -D

ip6 route -/

Syntax Description

Parameter	Description

<code>-s <prefix> <prefix-length> <gateway> < LAN1/..LAN20/WAN1/WAN2/ WAN3/WAN4/WAN5/USB1/USB 2/VPN1/..VPN200> <-D></code>	It means to add a route. <prefix>: It means to enter the prefix number of IPv6 address. <prefix length>: It means to enter a fixed value as the length of the prefix. <gateway>: It means to enter the gateway of the router. < LAN1/..LAN20/WAN1/WAN2/ WAN3/WAN4/WAN5/USB1/USB2/VPN1/..VPN200>: It means to specify LAN or WAN or VPN interface for such address. <-D>: It means that such route will be treated as the default route.
<code>-d <prefix> <prefix-length></code>	It means to delete a route. <prefix>: It means to enter the prefix number of IPv6 address. <prefix length>: It means to enter a fixed value as the length of the prefix.
<code>-a < LAN1/..LAN20/WAN1/WAN2/ WAN3/WAN4/WAN5/USB1/USB 2/VPN1/..VPN200></code>	It means to show the route status. < LAN1/..LAN20/WAN1/WAN2/ WAN3/WAN4/WAN5/USB1/USB2/VPN1/..VPN200>: It means to specify LAN or WAN or VPN interface for such address.
<code>-/</code>	It means to clear the routing table.

Example

```
> ip6 route -s FE80::250:7FFF:FE12:500 16 FE80::250:7FFF:FE12:100 LAN1
%      Route FE80::250:7FFF:FE12:500/16 successfully added!
> ip6 route -a LAN1
PREFIX/PREFIX-LEN                                I/F METRIC FLAG NEXT-HOP
-----

0
FF00::/8                                         LAN1   256 U  ::
>
```

Telnet Command: ip6 ping

This command allows you to ping an IPv6 address or a host.

Syntax

ip6 ping <IPV6 address/Host> <LAN1/..LAN20/WAN1/WAN2/
WAN3/WAN4/WAN5/USB1/USB2> <send count> <data_size>

Syntax Description

Parameter	Description

<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i>LAN1/..LAN20/WAN1/WAN2 /WAN3/WAN4/WAN5 /USB1/USB2</i>	It means to specify LAN or WAN interface for such address. <send count>: Set how many packets sent for ping. <data_size>: 1 to 1452. Set the data size for each packet to be pinged.

Example

```
> ip6 ping 2001:4860:4860::8888 WAN2 2 100
Pinging 2001:4860:4860::8888 with 100 bytes of Data:

Receive reply from 2001:4860:4860::8888, time=330ms
Receive reply from 2001:4860:4860::8888, time=330ms

Packets: Sent = 5, Received = 5, Lost = 0 <% loss>
>
```

Telnet Command: ip6 tracert

This command allows you to trace the routes from the router to the host.

Syntax

ip6 tracert <IPv6 address/Host> <LAN1/LAN2/.../LAN20/WAN1/.../WAN5/USB1/USB2>

Syntax Description

Parameter	Description
<i>IPv6 address/Host</i>	It means to specify the IPv6 address or host for ping.
<i>< LAN1/LAN2/.../LAN20/ WAN1/.../WAN5/USB1/USB2 ></i>	It means to specify an interface for such address.

Example

```
> ip6 tracert 2001:4860:4860::8888 LAN1
traceroute to 2001:4860:4860::8888, 30 hops max through protocol ICMP
 1 2001:5C0:1400:B::10B8      340 ms
 2 2001:4DE0:1000:A22::1      330 ms
 3 2001:4DE0:A::1             330 ms
 4 2001:4DE0:1000:34::1       340 ms
 5 2001:7F8:1: :A501:5169:1    330 ms
 6 2001:4860::1:0:4B3          350 ms
 7 2001:4860::8:0:2DAF         330 ms
 8 2001:4860::2:0:66E         340 ms
 9 Request timed out.          *
10 2001:4860:4860::8888       350 ms
Trace complete.
```

```
>
```

Telnet Command: ip6 tspc

This command allows you to display TSPC status.

Syntax

ip6 tspc <ifno>

Syntax Description

Parameter	Description
<i>ifno</i>	It means the connection interface. ifno=1 (means WAN1) info=2 (means WAN2)

Example

```
> ip6 tspc 2
Local Endpoint v4 Address : 111.243.177.223
Local Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b9
Router DNS name : 8886666.broker.freenet6.net
Remote Endpoint v4 Address :81.171.72.11
Remote Endpoint v6 Address : 2001:05c0:1400:000b:0000:0000:0000:10b8
Tspc Prefixlen : 56
Tunnel Broker: Amsterdam.freenet.net

Status: Connected

>
```

Telnet Command: ip6 radvd

This command allows you to enable or disable RADVD server.

Syntax

ip6 radvd <LAN1|LAN2|...|LAN20> [-<command> <parameter>| ...]

Syntax Description

Parameter	Description
<<command> <parameter>/...>	The available commands with parameters are listed below. <...> means that you can Enter several commands in one line.
-s <0/1>	It means to enable or disable the default lifetime of the RADVD server. 1: Enable the RADVD server. 0: Disable the RADVD server.
-D <0/1/2>	It means to set RDNSS Disable/Enable/Deploy (0/1/2) when WAN is up.
-d <lifetime>	It means to set RA default lifetime.
-i <lifetime>	It means to set RA min interval time(sec).
-I <lifetime>	It means to set RA MAX interval time(sec).
-h <hoplimit>	It means to set RA hop limit.

-m <mtu/auto>	It means to set RA MTU, 1280-1500. mtu: auto - auto select MTU from WAN,
-e <time>	It means to set reachable time.
-a <time/infinity>	It means to set retransmit timer /infinity.
-p <0/1/2>	It means to set radvd default preference Low/Medium/High. 0-low 1-medium 2-high
-v	It means to view radvd configuration.
-V	It means to view setting in RA.
-L <time/infinity>	It means to set prefix valid lifetime.
-P <time/infinity>	It means to set prefix preferred lifetime.
-r <num>	It means to to set RA test for item. <num>: 0, 121, 124 0: default, 121: logo 121, 124: logo 124..
-R	It means to reload Config and send RA for subnets.
-u	It means to view MTU on all interfaces.

Example

```
> ip6 radvd LAN1 -s 1
% [LAN1] setting !
%   Enable LAN1 radvd OK!
  This setting will take effect after rebooting.
  Please use "sys reboot" command to reboot the router.
> ip6 radvd LAN1 -d 1800
% [LAN1] setting !
%   Set default lifetime ok: 1800 !
> ip6 radvd LAN1 -V
% [LAN1] setting !
%   Default Lifetime      : 0 seconds
%   min interval time    : 200 seconds
%   MAX interval time    : 600 seconds
%   Hop limit            : 64
%   MTU                  : 0
%   Reachable time       : 0
%   Retransmit time      : 0
%   Preference           : Medium
>
```

Telnet Command: ip6 mngt

This command allows you to manage the settings for access list.

Syntax

ip6 mngt list

ip6 mngt list [add <Index> <IPv6 Object Index> | remove <Index> | flush]

ip6 mngt status

ip6 mngt <internet|http|telnet|ping|https|ssh|enforce_https> <on|off>

Syntax Description

Parameter	Description
<i>list</i>	It means to show the setting information of the access list.
<i>add</i> <Index> <IPv6 Object Index> <i>remove</i> <Index> <i>flush</i>	It means to add an IPv6 address which can be used to execute management through Internet. <Index>: 1 to 10. Ten profiles can be set for IPv6 access list. <IPv6 Object Index>: It means the index number of IP object (1 to 64) . <i>remove</i> <Index>: It means to remove (delete) the specified IP object.
<i>flush</i>	It means to clear the IPv6 access table.
<i>status</i>	It means to show the status of IPv6 remote management.
<i>internet/</i> <i>http/telnet/ping/https/ssh</i> <i>/enforce_https</i>	These protocols are used for accessing Internet.
<i>on/off</i>	It means to enable (on) or disable (off) the Internet accessing through http/telnet/ping.

Example

```
> ip6 mngt list add 1 1
%% Set OK.
% IPv6 Access List :
> ip6 mngt status
% IPv6 Remote Management :
internet access : off, telnet : off, http : off, https : off, ssh :
off, ping : off, enforce_https : off
>
```

Telnet Command: ip6 online

This command allows you to check the online status of IPv6 LAN /WAN.

Syntax

ip6 online <WAN1/.../WAN5/USB1/USB2>

Syntax Description

Parameter	Description
< WAN1/.../WAN5/ USB1/USB2>	It means the connection interface.

Example

```
> ip6 online WAN1
% WAN1 online status :
% IPv6 WAN1 Disabled
% Default Gateway : ::
% Interface : DOWN
% UpTime : 0:00:00
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% IPv6 DNS Server: :: Static
% Tx packets = 0, Tx bytes = 0, Rx packets = 0, Rx bytes = 0
```

```
% MTU Onlink: 1280 , Config MTU : 0
>
```

Telnet Command: ip6 aiccu

This command allows you to set IPv6 settings for WAN interface with connection type of AICCU.

Syntax

ip6 aiccu -i <ifno> -r

ip6 aiccu -i <ifno> -s

Syntax Description

Parameter	Description
<Ifno>	It means the connection interface. 1=WAN1 2=WAN2
-r	It means to remove (delete) the specified index number with IPv6 settings.
-s	It means to display the AICCU status.

Example

```
> ip6 aiccu -i 1 -s
Status: Idle
>
```

Telnet Command: ip6 ntp

This command allows you to set IPv6 settings for NTP (Network Time Protocols) server.

Syntax

ip6 ntp -h

ip6 ntp -v

ip6 ntp -p <0/1>

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-v	It is used to show the NTP state.
-p <0/1>	It is used to specify NTP server for IPv6. 0 – Auto 1 – First Query IPv6 NTP Server.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
>
```

Telnet Command: ip6 lan

This command allows you to set IPv6 settings for LAN interface.

Syntax

ip6 lan -l n <-</w:d:D:m:o:s> <parameter> / ... >

Syntax Description

Parameter	Description
-h	It is used to display the usage of such command.
-l <n>	It means to selete LAN interface to be set. n= 1: LAN1 n= 2: LAN2, ... x: LANx. Default is LAN1
-w <n>	It means to selete WAN interface to be primary interface. n= 0: None, n=1: WAN1 , n=2: WAN2, ... x: WANx.
-d <server>	It means to set 1st DNS Server IP. <server>: Enter the IPv6 Address.
-D <server>	It means to set 2nd DNS Server IP. <server>: Enter the IPv6 Address.
-m <n>	It means to set ipv6 LAN management. n=0:OFF n=1:SLAAC. Default is SLAAC n=2:DHCPv6
-o <n>	It means to enable Other option(O-bit) flag. (O-bit is redundant when management is DHCPv6) n=0: Disable n=1: Enable.
-e <n>	It means to add an extension WAN. n: 1: WAN1, 2: WAN2, ... x: WANx.
-E <n>	It means to delete an extension WAN. n: 1: WAN1 ,2: WAN2, ... x: WANx.
-b <map>	It means to set bit map(decimal) for extension WAN. <map>: 0: WAN1; 1: WAN2, ... n: WAN(n+1).
-f <n>	It means to disable IPv6. n=1: Disable IPv6, n=0: Enable IPv6.
-R <n>	It means to enable /disable RIPng. n=1: Enable RIPng, n=0: Disable RIPng.
-s <n>	It means to show IPv6 LAN setting. n=0:show all. Default is show all. n=1 to 8: LAN1 to LAN8. n=17: DMZ.

Example

```
> ip6 ntp -p 1
% Set NTP Priority: IPv6 First
%   Set LAN1!

%   Set primary WAN1!

% Set 1st DNS server 2001:4860:4860::8888

%   Set Other Option Enable!
```

```
% [LAN1] support ipv6!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

% [LAN2] setting:
% Primary WAN      : WAN1
% Management      : SLAAC
% Other Option     : Disable
% WAN Exten       : None
% Subnet ID       : 2
% Static IP(0)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(1)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(2)    : ::/0
%                  [ifno: 0, enable: 0]
% Static IP(3)    : ::/0
%                  [ifno: 0, enable: 0]
% DNS1            : 2001:4860:4860::8888
% DNS2            : 2001:4860:4860::8844
% ULA Type        : OFF
% RIPng           : Enable

>
```

Telnet Command: ip6 session

This command allows you to set sessions limit for IPv6 address.

Syntax

ip6 session *on*

ip6 session *off*

ip6 session *default* <num>

ip6 session *status*

ip6 session *show*

ip6 session *add* <P1-IP2><num>

ip6 session *del* <P1>/<all>

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on session limit for each IP.
<i>off</i>	It means to turn off session limit for each IP.
<i>default</i> <num>	It means to set the default number of session num limit. <num>: Enter a number.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all IP range session limit settings.
<i>add</i> <P1-IP2><num>	<add/del>: It means to add the session limit for an IPv6 range. <IP1-IP2> : Specify a range for IPv6 addresses. <num>: Enter a number.
<i>del</i> <IP1> / <i>all</i>	<del>: It means to delete the session limit for an IPv6 range. <IP1> : Specify the first IPv6 address within the IPv6 range. <i>all</i> : Delete all the session limits.

Example

```
> ip6 session on
> ip6 session add 2100:ABCD::2-2100:ABCD::10 100
> ip6 session status
```

```
IPv6 range:
  2100:ABCD::2 - 2100:ABCD::10 : 100

Current ip6 session limit is turn on

Current default session number is 100
```

Telnet Command: ip6 bandwidth

This command allows you to set IPv6 settings for bandwidth control.

Syntax

ip6 bandwidth on

ip6 bandwidth off

ip6 bandwidth default <tx_rate> <rx_rate>

ip6 bandwidth status

ip6 bandwidth show

ip6 bandwidth add <IP1-IP2> <tx><rx><shared>

ip6 bandwidth del < IP1-IP2> /all

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on bandwidth limit for each IP.
<i>off</i>	It means to turn off bandwidth limit for each IP.
<i>default <tx_rate> <rx_rate></i>	It means to set the default transmission (tx), receiving (rx) rate of bandwidth limit (0-30000 Kbps/Mbps). <tx_rate>: Enter a number. <rx_rate>: Enter a number.
<i>status</i>	It means to display the current settings.
<i>show</i>	It means to display all IP range bandwidth limit settings.
<i>add <IP1-IP2> <tx><rx><shared></i>	<add>: It means to add the bandwidth limit for an IPv6 range. <del>: It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <IP1-IP2> - Specify a range for IPv6 addresses. <tx><rx>: It means the bandwidth limit for transmission and receive rate. <shared>: It means the bandwidth will be shared for the IPv6 range.
<i>del < IP1-IP2> /all</i>	It means to delete the bandwidth limit for an IPv6 range by first IP (IP1) or 'del all'. <IP1-IP2> - Specify a range for IPv6 addresses. all: Delete all the bandwidth limits.

Example

```
> ip6 bandwidth on
> ip6 bandwidth add 2001:ABCD::2-2001:ABCD::10 512 5M shared
> ip6 bandwidth status

IPv6 range:
  2001:ABCD::2 - 2001:ABCD::10 : Tx:512K Rx:5M shared

Current ip6 Bandwidth limit is turn on

Current default ip6 Bandwidth rate is Tx:2000K Rx:8000K bps

>
```

Telnet Command: ipf view

IPF users to view the version of the IP filter, to view/set the log flag, to view the running IP filter rules.

Syntax

ipf view [-VcdhrtzZ]

Syntax Description

Parameter	Description
-V	It means to show the version of this IP filter.
-c	It means to show the running call filter rules.
-d	It means to show the running data filter rules.
-h	It means to show the hit-number of the filter rules.
-r	It means to show the running call and data filter rules.
-t	It means to display all the information at one time.
-z	It means to clear a filter rule's statistics.
-Z	It means to clear IP filter's gross statistics.

Example

```
> ipf view -V -c -d
ipf: IP Filter: v3.3.1 (1824)
Kernel: IP Filter: v3.3.1
Running: yes
Log Flags: 0x80947278 = nonip
Default: pass all, Logging: available
```

Telnet Command: ipf set

This command is used to set general rule, filter set and filter rule for firewall.

Syntax

ipf set <Options>

ipf set <SET_NO><Options>

ipf set <SET_NO> rule <RULE_NO><Options>

Syntax Description

Parameter	Description
<Options>	It means to set the firewall general setup and default rule.
<SET_NO><Options>	It means to set the firewall filter set including comments and next filter set.

<code><SET_NO> rule <RULE_NO><Options></code>	It means to set the firewall rule in filter set. For detailed information, refer to Telnet Command: ipf rule.
<i>About ipf set <options></i>	
<code>-v</code>	It means to view the configuration of general set.
<code>-c <p1></code>	It means to setup Call Filter. <p1>: Specify the index number (1 to 12) of the set profile. To disable the setting, enter "0".
<code>-d <p1></code>	It means to setup Data Filter. <p1>: Specify the index number (1 to 12) of the set profile. To disable the setting, enter "0".
<code>-p <p1><p2></code>	It means to setup actions for packet not matching any rule and whether record syslog. <p1>: Type "0" to let packets not matching any rule pass; Type "1" to block the packets not matching any rule. <p2>: "0" means the log related to rule matching will not be recorded on Syslog; "1" means the log related to rule matching will be recorded on Syslog. For example, to set pass for packet not matching any rule and enable syslog, <code>-p 0 1</code> .
<code>-R <v4/v6> <Enable/Disable></code>	It means to accept routing packet from WAN. <v4/v6>: IPv4 or IPv6. <Enable/Disable>: Enter 0 (enable) or 1 (disable). Set Accept routing packet from WAN by IPv4, please enter <code>-R v4 0</code> .
<code>-L <p1></code>	It means to enable or disable the Strict Security Firewall function. <p1>: Enter 1(enable) or 0 (disable).
<code>-C <p1></code>	It means to setup Code Page. <p1>: Enter a code page number (0 to 20). For example, ipf set -C 20. 0. None 1. ANSI(1250)-Central Europe 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. ANSI/OEM(874)-Thai 17. ANSI/OEM(932)-Japanese Shift-JIS 18. ANSI/OEM(936)-Simplified Chinese GBK 19. ANSI/OEM(949)-Korean 20. ANSI/OEM(950)-Traditional Chinese Big5
<code>-M <p1><p2></code>	It means to setup APP Enforcement and Syslog. <p1>: Enter a number (0 to 32). In which, 0 means none; 1 to 32

	mens the index number of the profile. <p2>: "0" means the log related to APP Enforcement will not be recorded on Syslog; "1" means the log related to APP Enforcement will be recorded on Syslog.
-U <p1><p2>	It means to setup URL Content Filter for packets not matching any rule. <p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile. <p2>: "0" means the log related to URL Content Filter will not be recorded on Syslog; "1" means the log related to URL Content Filter will be recorded on Syslog.
-W <p1><p2>	It means to setup Web Content Filter for packets not matching any rule. <p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile. <p2>: "0" means the log related to Web Content Filter will not be recorded on Syslog; "1" means the log related to Web Content Filter will be recorded on Syslog.
-D <p1><p2>	It means to setup DNS Filter for packets not matching any rule. <p1>: Enter a number (0 to 8). In which, 0 means none; 1 to 8 mens the index number of the profile. <p2>: "0" means the log related to DNS Filter will not be recorded on Syslog; "1" means the log related to DNS Filter will be recorded on Syslog.
-a <p1>	It means to configure the advanced settings.
-f <p1>	It means to accept large incoming fragmented UDP or ICMP packets. <p1>: Enter 1(enable) or 0 (disable).
-t <p1>	It means to enable or disable the Transparent Mode. <p1>: Enter 1(enable) or 0 (disable).
-E <p1><p2>	It means to set the maximum count for session limitation. <p1>: Enter a number (0 to 50000) <p2>: "0" means the log related to session control will not be recorded on Syslog; "1" means the log related to session control will be recorded on Syslog.
-Q <p1><p2>	It means to set the QoS Class. <p1>: Enter a number (0 to 4). 0: None 1: Class 1 2: Class 2 3: Class 3 4: Default Class <p2>: "0" means the log related to QoS Class will not be recorded on Syslog; "1" means the log related to QoS Class will be recorded on Syslog.
-Y <p1><p2>	It means to set the User Management. <p1>: Enter a number (-1 to 2). -1: None 0: All 1: user object 2: user group <p2>: 1 to 200(if p1 is set with 1, user object) or 1 to 32(if p1 is set with 2, user group)
-y <p1>	It means the log related to User Management will be or be not recorded on Syslog.

	<p1>: Enter 1(enable) or 0 (disable).
-w <p1>	It means to set the window size of TCP protocol. <p1>: Enter a value (0 to 65535).
-A <p1>	It means to enable or disable the function of packet capture. <p1>: Enter 1(enable) or 0 (disable).
-m <Comments>	It means to set comment for a filter set. <Comments>: Enter a description for the filter set.
-v	It means to view the comment and the next filter set.
-n <NEXT_SET_NO>	It means to specify the next filter set of current filter set. <NEXT_SET_NO>: Enter a number (1 to 12). For example, ipf set 1 -n 2.

Example

```

> ipf set
> ipf set 1 -m sansansan
> ipf set 1 -v
Filter Set 1 Comment: sansansan
Next Filter Set: 0
> DrayTek> ipf set -c 3 -p 0 1

Setting saved.

DrayTek> ipf set -R "v4 1"

Setting saved.

DrayTek> ipf set -R "v6 1"

Setting saved.

DrayTek> ipf set -v

Call Filter: Enable (Start Filter Set = 3)
Data Filter: Enable (Start Filter Set = 2)
Log Flag   : Disable

Actions for packet not matching any rule:
Pass or Block      : Pass
CodePage           : ANSI(1252)-Latin I
Max Sessions Limit : 150000
Current Sessions   : 0
Mac Bind IP        : Non-Strict
QOS Class          : None
Packet Capture     : Disable
APP Enforcement    : None
URL Content Filter : None
WEB Content Filter : None
DNS Filter         : None
Load-Balance policy : Auto-select
-----
CodePage           : ANSI(1252)-Latin I
Window size        : 65535
Session timeout    : 60
DrayTek Banner     : Enable
-----
Accept large incoming fragmented UDP or ICMP packets: Enable
Transparent Mode   : Disable
-----
Block routing packet from WAN:
[v] IPv4
[v] IPv6
-----
[v] Enable Strict Security Firewall

```

>

Telnet Command: ipf rule

This command is used to set filter rule for firewall.

Syntax

ipf rule s r [*-<command>* *<parameter>*] | ...

ipf rule s r -v

Syntax Description

Parameter	Description
s	It means the Filter Set. s: Enter a value (1 to 12).
r	It means Filter Rule r: Enter a value (1~7).
[<i><command></i> <i><parameter></i>]...	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <i><0/1></i>	It means to enable or disable the rule setting. 0: disable 1:enable
-v	It is used to show current filter rule settings.
-D <i><value></i>	It means to set the direction of packet flow. It is for Data Filter only. 0: LAN/ RT/VPN -> WAN 1: WAN -> LAN/DMZ/RT/VPN 2: LAN/ RT/VPN -> LAN/ RT/VPN
-I " <i><e/d><para1, para2,...></i> "	It means to set incoming interface. e: Enable the function. d: Disable the function. Para1, para2,...: Available values include all, LAN1, LAN2,...LAN20, RT, VPN, WAN1, WAN2,...WAN23 Example: > ipf rule 3 1 -e 1 -I "e LAN1"
-O " <i><e/d><para1, para2,...></i> "	It means to set outgoing interface. e: Enable the function. d: Disable the function. Para1, para2,...: Available values include all, LAN1, LAN2,...LAN20, RT, VPN, WAN1, WAN2,...WAN23 Exampe: > ipf rule 3 1 -e 1 -O "e LAN2"
-s " <i>o/o6/g/g6/c <field></i> <i><obj></i> "	It means to specify source IP object, IP group. o: Indicates "IPv4 object". o6: Indicates IPv6 object". g: Indicates "IPv4 group". g6: Indicates "IPv6 group". c: Indicates country object. field: Indicates the quantity of objects/groups that can be set for this rule at one time. -2 object profiles are allowed for IPv4 -2 group profiles are allowed for IPv4 group -3 object profiles are allowed for IPv6 -1 group profiles is allowed for IPv6 group

	obj : indicates index number of object or index number of group. -Range for IPv4, from 1 to 192, 0 means none. -Range for IPv4 group, from 1 to 32, 0 means none. -Range for IPv6, from 1 to 64, 0 means none. -Range for IPv6 group, from 1 to 32, 0 means none. -Ranges for country object, from 1 to 32. For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as source IP. Exampe: > ipf rule 3 1 -e 1 -s "o 1 2"
-s "u <Address Type> <Start IP Address> <End IP Address> / <Address Mask>"	It means to configure source IP address including address type, start IP address, end IP address and address mask. u : It means "user defined". Address Type : Type the number (representing different address type). 0 : Subnet Address 1 : Single Address 2 : Any Address 3 : Range Address Example: Set Subnet Address => -s "u 0 192.168.1.10 255.255.255.0" Set Single Address => -s "u 1 192.168.1.10 " Set Any Address => -s "u 2 " Set Range Address => -s "u 3 192.168.1.10 192.168.1.15"
-d "o/o6/g/g6/c <field> <obj>"	It means to specify destination IP object, IP group. - o: Indicates "IPv4 object". - o6: Indicates IPv6 object". - g: Indicates "IPv4 group". - g6: Indicates "IPv6 group". - c: Indicates country object. field: Indicates the quantity of objects/groups can be set for this rule at one time. -2 object profiles are allowed for IPv4 -2 group profiles are allowed for IPv4 group -3 object profiles are allowed for IPv6 -1 group profiles is allowed for IPv6 group obj : indicates index number of object or index number of group. -Range for IPv4, from 1 to 192, 0 means none. -Range for IPv4 group, from 1 to 32, 0 means none. -Range for IPv6, from 1 to 64, 0 means none. -Range for IPv6 group, from 1 to 32, 0 means none. -Ranges for country object, from 1 to 32. For example, -s "o 1 2" means IPv4 object profile 1 and 2 are set as destination IP. Exampe: > ipf rule 3 1 -e 1 -d "o 2 2"
-d "u <Address Type> <Start IP Address> <End IP Address> /<Address Mask>"	It means to configure destination IP address including address type, start IP address, end IP address and address mask. u : It means "user defined". Address Type : Type the number (representing different address type). 0 : Subnet Address 1 : Single Address 2 : Any Address 3 : Range Address Example:

	Set Subnet Address => -d "u 0 192.168.1.10 255.255.255.0" Set Single Address => -d "u 1 192.168.1.10" Set Any Address => -d "u 2" Set Range Address => -d "u 3 192.168.1.10 192.168.1.15"
-S o/g <obj>	It means to specify Service Type object. o : indicates "object" profile. g: indicates "group" profile. <obj> : indicates index number of object or index number of group. Available settings range from 1-96. For example, -S "o 1" means the first service type object profile.
-S "u <protocol> <source_port_value> <destination_port_vale>"	It means to configure advanced settings for Service Type, such as protocol and port range. u : it means "user defined". <protocol> : It means TCP(6),UDP(17), TCP/UDP(255), Any(0), ICMP(1), ICMPv6(58), Other(other) <source_port_value> : 1 : Port OP, range is 0-3. 0:=, 1:!=, 2:>, 3:< 3 : Port range of the Start Port Number, range is 1-65535. 5 : Port range of the End Port Number, range is 1-65535. <destination_port_value>: 2 : Port OP, range is 0-3, 0==, 1:!=, 2:>, 3:< 4 : Port range of the Start Port Number, range is 1-65535. 6: Port range of the End Port Number, range is 1-65535.
-f <value>	It means to set fragment type. 0 : Don't care. 1 : Unfragmented. 2 : Fragmented. 3 : Too Short
-F "<Param 0> <Param 1>"	It means the Filter action you can specify. <param 0>: Enter the number to set the filter action. 0 : Pass Immediately. 1 : Block Immediately. 2 : Pass if no further match. 3 : Block if no further match. <Param 1>: Let the log be recorded on Syslog. 0 : Disable Log. 1 : Enable Log.
-m "<Param 0> <Param 1>"	It means to set MAC Bind IP type and the Syslog. <param 0>: Enter the number to choose the type. 0 : Non-Strict. 1 : Strict. <Param 1>: Let the log be recorded on Syslog. 0 : Disable Log. 1 : Enable Log.
-Y <Param 0> <Param 1>	It means to set the User Management. <param 0>: Enter the number to choose the type. -1 : None. 0 : All. 1 : User Object 2 : User group

	<Param 1>: Let the log be recorded on Syslog if <param 0> is set with None/ALL. 0 : Disable. 1 : Enable. Enter the the user object number (1 to 200) / group number (1 to 32) if <param 0> is set with User Object.
-y <value>	It means the log related to User Management will be or be not recorded on Syslog. <value>: Enter 1(enable) or 0 (disable).
-L <Param 0> <Param 1>	It means to set the maximum count for the session limitation. <param 0>: Enter the number (0 to 150000) to choose the type. <Param 1>: Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-q <Param 0> <Param 1>	It means to set the classification for QoS. <Param 0>: 1- Class 1, 2 - Class 2, 3 - Class 3, 4 - Other <Param 1>: Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-A "<Param 0>"	It means to enable or disable the packet capture function. <Param 0>: Enter 0 or 1. 0 : Disable. 1 : Enable.
-I <Param 0> <Param 1>	It means load balance policy. Such function is used for "debug" only. <Param 0>: Enter 0, 1, 2, or 3. 0:Auto-Select, 1:WAN 1. 2:WAN 2. 3:WAN 3. <Param 1>: Enter 0 or 1. 0:Disable Log. 1:Enable Log.
-a "<Param 0> <Param 1>"	It means to specify which APP Enforcement profile will be applied. <Param 0> : Available settings range from 0 ~ 32. "0" means no profile will be applied. <Param 1> : Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-u <Param 0> <Param 1>	It means to specify which URL Content Filter profile will be applied. <Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied. <Param 1> : Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-w "<Param 0> <Param 1>"	It means to specify which Web Content Filter profile will be applied. <Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied.

	<Param 1> : Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-n "<Param 0> <Param 1>"	It means to specify which DNS Filter profile will be applied. <Param 0> : Available settings range from 0 ~ 8. "0" means no profile will be applied. <Param 1> : Let the log be recorded on Syslog. 0 : Disable. 1 : Enable.
-N <value>	It means to set the Next Filter Set. <value> : Available settings range from 0 ~ 12. "0" means no profile will be applied. 0 : None 1 : Set#1; 2: Set#2, and so on.
-c <0~20>	It means to set code page. Different number represents different code page. 0. None 1. ANSI(1250)-Central Europe 2. ANSI(1251)-Cyrillic 3. ANSI(1252)-Latin I 4. ANSI(1253)-Greek 5. ANSI(1254)-Turkish 6. ANSI(1255)-Hebrew 7. ANSI(1256)-Arabic 8. ANSI(1257)-Baltic 9. ANSI(1258)-Viet Nam 10. OEM(437)-United States 11. OEM(850)-Multilingual Latin I 12. OEM(860)-Portuguese 13. OEM(861)-Icelandic 14. OEM(863)-Canadian French 15. OEM(865)-Nordic 16. ANSI/OEM(874)-Thai 17. ANSI/OEM(932)-Japanese Shift-JIS 18. ANSI/OEM(936)-Simplified Chinese GBK 19. ANSI/OEM(949)-Korean 20. ANSI/OEM(950)-Traditional Chinese Big5
-C "<Windows Size> <Session_Timeout>"	It means to set Window size and Session timeout (Minute). <Windows Size> - Available settings range from 1 ~ 65535. <Session_Timeout> - Make the best utilization of network resources.
-b <value>	It means to enable or disable the DrayTek Banner. <value>: 0 : Disable; 1 : Enable.
-t "i <Param 0> <Param 1>"	It means to set schedule profile. Totally, there are four sets of schedule profiles can be specified. <param 0>: Enter the index number (1 to 4) for each set. <param 1>: Enter the index number (0 to 15) of the schedule profile for each set. 0 means none. For example, -t "i 1 3" means schedule profile #3 is configured for set #1. Exampe: > ipf rule 3 1 -e 1 -t "i 1 3"
-t "c <value>"	It means to enable or disable the function of clearing sessions when the schedule is ON.

	<value>: 0 : Disable; 1 : Enable.
-M <Your Comments>	It means to set comments for the filter rule. <Your Comments>: Enter a brief description.
-U "<up/down>"	It means to move up or move down the order of a filter rule in the filter set. up: It indicates move the filter rule up. down: It indicates move the filter rule down.

Example

```

> ipf rule 3 1 -e 1 -M testtest -s "u 1 192.168.1.20" -F "0 1"
Setting saved.
> ipf rule 3 1 -v
Filter Set 3 Rule 1:

Status      : Enable
Comments: testtest
Index(1-15) in Schedule Setup: <null>, <null>, <null>, <null>

Clear sessions when schedule is ON: Disable

Direction   : LAN/RT/VPN -> WAN
Src Interface : LAN1, LAN2, LAN3, LAN4, LAN5, LAN6, LAN7, LAN8, LAN9, LAN10,
LAN 1, LAN12, LAN13, LAN14, LAN15, LAN16, LAN17, LAN18, LAN19, LAN20, Routed,
VPN,Dst Interface : WAN1, WAN2, WAN3, WAN4, WAN5, WAN6, WAN7, WAN8, WAN9, WAN10,
WAN11, WAN12, WAN13, WAN14, WAN15, WAN16, WAN17, WAN18, WAN19, WAN20, WAN21,
WAN22, WAN23
Source IP      : 192.168.1.20
Destination IP : Any
Service Type   : Any
Fragments      : Don't Care

Pass or Block      : Pass Immediately
Branch to Other Filter Set : None
Max Sessions Limit : 150000
Current Sessions   : 0
Mac Bind IP        : Non-Strict
Qos Class          : None
Packet Capture     : Disable
APP Enforcement     : None
URL Content Filter  : None
WEB Content Filter  : None
DNS Filter          : None
Load-Balance policy : Auto-select
Log                : Enable
-----
CodePage           : ANSI(1252)-Latin I
Window size        : 65535
Session timeout    : 60
DrayTek Banner     : Enable
-----
Strict Security Checking

```

Telnet Command: ipf flowtrack

This command is used to set and view flowtrack sessions.

Syntax

ipf flowtrack set <-r/-e>

ipf flowtrack view <-f/-b>

ipf flowtrack set -i<IP address> -p<value>-t<value>

Syntax Description

Parameter	Description
-r	It means to refresh the flowtrack.
-e	It means to enable or disable the flowtrack.
-f	It means to show the sessions state of flowtrack. If you do not specify any IP address, then all the session state of flowtrack will be displayed.
-b	It means to show all of IP sessions state.
-i <IP address>	It means to specify IP address (e.g., -i 192.168.2.55).
-p <value>	It means to type a port number (e.g., -p 1024). Available settings are 0 ~ 65535.
-t <value>	It means to specify a protocol (e.g., -t tcp). Available settings include: <i>tcp</i> <i>udp</i> <i>icmp</i>

Example

```
> ipf flowtrack set -e
Current flowtrack ON
> ipf flowtrack set -i 192.168.1.102 -p 1024 -t tcp
> ipf flowtrack view -f
Start to show the flowtrack sessions state:

ORIGIN>> 192.168.1.1:19181 -> 192.168.1.10: 443 ,ifno=0 nat=-1
REPLY >> 192.168.1.10: 443 -> 192.168.1.1:19181 ,ifno=0 nat=-1
        proto=6, age=666084170(4700), flag=20009, timeout=1, num=0, size=0
        origin TCP>> end=0x0, max_end=0x0, max_win=0x0
        reply TCP>> end=0x0, max_end=0x0, max_win=0x0
End to show the flowtrack sessions state
>
```

Telnet Command: ipf flowtest

This command is used to for RD debug in firewall diagnose.

Telnet Command: Log

This command allows users to view log for WAN interface such as call log, IP filter log, flush log buffer, etc.

Syntax

log *[-cfhiptwx?] [-F a | c | f | w]*

Syntax Description

Parameter	Description
-c	It means to show the latest call log.
-f	It means to show the IP filter log.
-F	It means to show the flush log buffer. a: flush all logs c: flush the call log f: flush the IP filter log w: flush the WAN log
-h	It means to show this usage help.
-p	It means to show PPP/MP log.
-t	It means to show all logs saved in the log buffer.
-w	It means to show WAN log.
-X	It means to show packet body hex dump.

Example

```
> log -w
25:36:25.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:33.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:41.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:49.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    Next server IP = 0.0.0.0
    Relay agent IP = 0.0.0.0
25:36:57.580 ---->DHCP (WAN-5) Len = 548XID = 0x7880fdd4
    Client IP      = 0.0.0.0
    Your IP        = 0.0.0.0
    --- MORE ---   ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: ldap user

This command is used to configure the LDAP profile.

Syntax

ldap user [*INDEX*][*OPTION*]

Syntax Description

Parameter	Description
<i>INDEX</i>	Specify the index number (1 to 8) of the LDAP profile.
<i>OPTION</i>	
<i>-n</i> <i>VALUE</i>	Setup Profile Name.
<i>-b</i> <i>VALUE</i>	Setup Base Distinguished Name.
<i>-a</i> <i>VALUE</i>	Setup Additional Filter.
<i>-g</i> <i>VALUE</i>	Setup Group Distinguished Name.
<i>-c</i> <i>VALUE</i>	Setup Common Name Identifier.
<i>-v</i>	View detail information of the LDAP profile.

Example

```
>ldap user 1 -n LD_user_test1
Profile Name has been updated!
>ldap user 1 -v
Profile Index:1
Profile Name:LD_user_test1
Common Name Identifier:
Base Distinguished Name:
Additional Filter:
Group distinguished Name:
```

Telnet Command: ldap set

This command is used to set general settings (e.g., IP address, port number) for LDAP server.

Syntax

ldap set <*Options*><*Value*>

Syntax Description

Parameter	Description
<i>enable</i> <0-1>	Enable or disable LDAP function. 0 : Disable the function. 1 : Enable the function.
<i>type</i> <0-2>	Set the bind type as Simple(0),Anonymous(1), and Regular(2).
<i>ssl</i> <0-1>	Enable or disable LDAP function via SSL tunnel. 0 : Disable the function. 1 : Enable the function.
<i>IP</i> < <i>VALUE</i> >	Set IP address for LDAP server.
<i>port</i> < <i>VALUE</i> >	Set port number for LDAP server.
<i>dn</i> < <i>VALUE</i> >	Set Regular DN value
<i>PWD</i> < <i>VALUE</i> >	Set Regular password value.

Example

```
>ldap set enable 1
>ldap enabled.
>ldap set ssl 1
LDAP with SSL has been enabled!
>ldap set IP 192.168.100.155
LDAP Server IP has been setting.
>ldap set port 389
LDAP Server Port has been setting.
>ldap set dn dc=example,dc=com
LDAP Regular DN has been setting.
>ldap set PWD 123456
LDAP Regular Password has been setting.
```

Telnet Command: ldap view

This command is used to check current status of LDAP settings configuration.

Syntax

ldap view

Example

```
> ldap view ?
LDAP Enable:Enable.
LDAP Bind Type:Simple
LDAP with SSL:Enable
LDAP Regular DN:dc=example,dc=com
LDAP Regular Password:123456
LDAP Server IP:192.168.100.155
LDAP Server Port:389
>
```

Telnet Command: tacacsplus set

This command allows users to configure general settings for TACACS+ server

Syntax

tacacsplus set <Options><Value>

Syntax Description

Parameter	Description
<i>enable [0-1]</i>	Disable (0)/enable(1) the TACACS+ server.
<i>IP <VALUE></i>	Set the IP address of TACACS+ server.
<i>port <VALUE></i>	Set the port number of TACACS+ server.
<i>shared_secret <VALUE></i>	Set the Shared Secret value of TACACS+ Server.

Example

```
> tacacsplus set enable 1
TACACS+ enabled!
```

```
This setting will take effect after rebooting.  
Please use "sys reboot" command to reboot the router.
```

```
> tacacsplus set IP 192.168.1.59  
TACACS+ Server IP has been setting.  
This setting will take effect after rebooting.  
Please use "sys reboot" command to reboot the router.  
> tacacsplus view  
TACACS+ Enable:Enable.  
TACACS+ Server IP:192.168.1.59  
TACACS+ Server Port:49  
TACACS+ Type:ASCII  
TACACS+ Shared Secret:  
>
```

Telnet Command: tacacsplus view

This command allows users to check the general settings for TACACS+ server

Syntax

tacacsplus view

Example

```
> tacacsplus view  
TACACS+ Enable:Enable.  
TACACS+ Server IP:192.168.1.59  
TACACS+ Server Port:49  
TACACS+ Type:ASCII  
TACACS+ Shared Secret:
```

Telnet Command: mngt ftpport

This command allows users to set FTP port for management.

Syntax

mngt ftpport <FTP port>

Syntax Description

Parameter	Description
<i>FTP port</i>	It means to Enter the number for FTP port. The default setting is 21.

Example

```
> mngt ftpport 21  
% Set FTP server port to 21 done.
```

Telnet Command: mngt httpport

This command allows users to set HTTP port for management.

Syntax

mngt httpport <Http port>

Syntax Description

Parameter	Description
<i>Http port</i>	It means to enter the number for HTTP port. The default setting is 80.

Example

```
> mngt httpport 80
% Set web server port to 80 done.
```

Telnet Command: mngt httpsport

This command allows users to set HTTPS port for management.

Syntax

mngt httpsport <*Https port*>

Syntax Description

Parameter	Description
<i>Https port</i>	It means to Enter the number for HTTPS port. The default setting is 443.

Example

```
> mngt httpsport 443
% Set web server port to 443 done.
```

Telnet Command: mngt sslvpnport

This command allows users to set SSL VPN port for management.

Syntax

mngt sslvpnport <*SSL VPN port*>

Syntax Description

Parameter	Description
<i>SSL VPN port</i>	It means to type the number for SSL VPN port. The default setting is 443.

Example

```
> mngt sslvpnport 1010
% Set SSL VPN port to 1010 done.
```

Telnet Command: mngt telnetport

This command allows users to set telnet port for management.

Syntax

mngt telnetport <Telnet port>

Syntax Description

Parameter	Description
<i>Telnet port</i>	It means to Enter the number for telnet port. The default setting is 23.

Example

```
> mngt telnetport 23
% Set Telnet server port to 23 done.
```

Telnet Command: mngt sshport

This command allows users to set SSH port for management.

Syntax

mngt sshport <ssh port>

Syntax Description

Parameter	Description
<i>ssh port</i>	It means to Enter the number for SSH port. The default setting is 22.

Example

```
> mngt sshport 23
% Set ssh port to 23 done.
```

Telnet Command: mngt noping

This command is used to pass or block Ping from LAN PC to the internet.

Syntax

mngt noping *on*

mngt noping *off*

mngt noping *viewlog*

mngt noping *clearlog*

Syntax Description

Parameter	Description
<i>on</i>	All PING packets will be forwarded from LAN PC to Internet.
<i>off</i>	All PING packets will be blocked from LAN PC to Internet.
<i>viewlog</i>	It means to display a log of ping action, including source MAC and source IP.
<i>clearlog</i>	It means to clear the log of ping action.

Example

```
> mngt noping off  
No Ping Packet Out is OFF!!
```

Telnet Command: mngt defenseworm

This command can block specified port for passing through the router.

Syntax

mngt defenseworm *on*

mngt defenseworm *off*

mngt defenseworm *<add port>*

mngt defenseworm *<del port>*

mngt defenseworm *<viewlog>*

mngt defenseworm *<clearlog>*

Syntax Description

Parameter	Description
<i>on</i>	It means to activate the function of defense worm packet out.
<i>off</i>	It means to inactivate the function of defense worm packet out.
<i>add port</i>	It means to add a new TCP port for block.
<i>del port</i>	It means to delete a TCP port for block.
<i>viewlog</i>	It means to display a log of defense worm packet, including source MAC and source IP.
<i>clearlog</i>	It means to remove the log of defense worm packet.

Example

```
> mngt defenseworm add 21  
Add TCP port 21  
Block TCP port list: 135, 137, 138, 139, 445, 21  
> mngt defenseworm del 21  
Delete TCP port 21  
Block TCP port list: 135, 137, 138, 139, 445
```

Telnet Command: mngt rmtcfg

This command can allow the system administrators to login from the Internet. By default, it is not allowed.

Syntax

mngt rmtcfg *<status>*

mngt rmtcfg *<enable>*

mngt rmtcfg *<disable>*

mngt rmtcfg *<http/https/ftp/telnet/ssh/tr069/snmp><on/off>*

Syntax Description

Parameter	Description
<i>status</i>	It means to display current setting for your reference.
<i>enable</i>	It means to allow the system administrators to login from the Internet.
<i>disable</i>	It means to deny the system administrators to login from the Internet.
<i>http/https/ftp/telnet/ssh/t r069/snmp</i>	It means to specify one of the servers/protocols for enabling or disabling.
<i>on/off</i>	on – enable the function. off – disable the function.

Example

```
> mngt rmtcfg ftp on
Enable server fail
Remote configure function has been disabled
please enable by enter mngt rmtcfg enable

> mngt rmtcfg enable
%% Remote configure function has been enabled.
> mngt rmtcfg ftp on
%% FTP server has been enabled.
```

Telnet Command: mngt lanaccess

This command allows users to manage accessing into Vigor router through LAN port.

Syntax

mngt lanaccess -e <0/1> -s <value> -i <value> -l <value>

mngt lanaccess -E

mngt lanaccess -f

mngt lanaccess -d

mngt lanaccess -v

mngt lanaccess -h

Syntax Description

Parameter	Description
<i>-e <0/1></i>	It means to enable/disable the function. 0-disable the function. 1-enable the function.
<i>-s <value></i>	It means to specify service offered. Available values include: FTP, HTTP, HTTPS, ENFORCE_HTTPS, TELNET, SSH, None, All
<i>-i <value></i>	It means the interface which is allowed to access. Available values include: LAN1~LAN20, IP Routed Subnet, None, All Note: LAN1 is always allowed for accessing into the router.
<i>-l <value></i>	It means the IP object index allowed to access. Available values include: 1 to 192
<i>-E <0/1></i>	It means to enable the function of specific IP allowed to be access.

	0-disable the function. 1-enable the function.
<i>-f</i>	It means to flush all of the settings.
<i>-d</i>	It means to restore the factory default settings.
<i>-v</i>	It means to view current settings.
<i>-h</i>	It means to get the usage of such command.

Example

```
> mngt lanaccess -e 1 -s FTP -i LAN1 -I 1
> mngt lanaccess -v
Current LAN Access Control Setting:
* Enable:Yes
* Service:
  - FTP:Yes
  - HTTP:No
  - HTTPS:No
  - TELNET:No
  - SSH:No
  - TR069:No
  - Enforce HTTPS:No
* Subnet:
  - LAN 49: enabled
    - Specific IP(IP object:1) is disabled
  - LAN 50: disabled
    - Specific IP(IP object:0) is disabled
  - LAN 51: disabled
    - Specific IP(IP object:0) is disabled
  - LAN 52: disabled
    - Specific IP(IP object:0) is disabled
  - LAN 53: disabled
    - Specific IP(IP object:0) is disabled
  - LAN 54: disabled
    - Specific IP(IP object:0) is disabled
  - LAN 55: disabled
    - Specific IP(IP object:0) is disabled
...
...
>
```

Telnet Command: mngt echoicmp

This command allows users to reject or accept PING packets from the Internet.

Syntax

mngt echoicmp <enable>

mngt echoicmp <disable>

Syntax Description

Parameter	Description
<i>enable</i>	It means to accept the echo ICMP packet.

<i>disable</i>	It means to drop the echo ICMP packet.

Example

```
> mngt echoicmp enable
%% Echo ICMP packet enabled.
```

Telnet Command: mngt accesslist

This command allows you to specify that the system administrator can login from a specific host or network. A maximum of ten IPs/subnet masks is allowed.

Syntax

mngt accesslist *list*

mngt accesslist add <Index><IP Object Index>

mngt accesslist remove <index>

mngt accesslist flush

Syntax Description

Parameter	Description
<i>list</i>	It can display current setting for your reference.
<i>add</i>	It means adding a new entry.
<i>index</i>	It means to specify the number (1 to 10) of the entry.
<i>IP Object Index</i>	It means to specify an IP object by entering the index number of the object profile. Available value: 1 to 192.
<i>remove</i>	It means to delete the selected item.
<i>flush</i>	It means to remove all the settings in the access list.

Example

```
> mngt accesslist add 1 1
%% Set OK.
> mngt accesslist list
%% Access list :
  [Index]      [IP Object Index]      [IP/CIDR or StartIP ~ EndIP]
=====
   1           1                     192.168.1.9 ~ 192.168.1.9
>
```

Telnet Command: mngt wanlogin

This command allows you to enable or disable WAN login function.

Syntax

mngt wanlogin *enable*

mngt wanlogin *disable*

Example

```
> mngt wanlogin enable
```

```
%% wan login enabled.  
>
```

Telnet Command: mngt snmp

This command allows you to configure SNMP for management.

Syntax

mngt snmp [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-e <1/2>	1: Enable the SNMP function. 2: Disable the SNMP function.
-g <Community name>	It means to set the name for getting community by typing a proper character. (max. 23 characters)
-s <Community name>	It means to set community by typing a proper name. (max. 23 characters)
-m <IP address>	It means to set one host as the manager to execute SNMP function. Please Enter IPv4 address to specify certain host.
-t <Community name>	It means to set trap community by typing a proper name. (max. 23 characters)
-n <IP address>	It means to set the IPv4 address of the host that will receive the trap community.
-T <seconds>	It means to set the trap timeout <0~999>.
-V	It means to list SNMP setting.

Example

```
>mngt snmp -e 1 -g draytek -s DK -m 192.168.1.20,192.168.5.192/26,10.20.3.40/24  
-t trapcom -n 192.168.1.20,10.20.3.40 -T 88  
SNMP Agent Turn on!!!  
Get Community set to draytek  
Set Community set to DK  
Manager Host IP set to 192.168.1.20,192.168.5.192/26,10.20.3.40/24  
Trap Community set to trapcom  
Notification Host IP set to 192.168.1.20,10.20.3.40  
Trap Timeout set to 88 seconds  
>
```

Telnet Command: mngt bfp

This command allows you to configure brute force protect (BFP) for system management.

Syntax

mngt bfp [<command><parameter>|...]

Syntax Description

Parameter	Description
[<command>	The available commands with parameters are listed below.

<i><parameter> [...]</i>	<i>[...]</i> means that you can Enter several commands in one line.
<i>-e 0/1</i>	Enable / disable the BFP function. 0 - Disable 1 - Enable
<i>-s <service></i>	It means to enable different service. service - Available types are FTP, HTTP, HTTPS, TELNET, TR069, SSH, and All.
<i>-l <failure></i>	It means to set login failure retry times. failure - Available number is from 1 to 255.
<i>-p <penalty></i>	It means to set penalty time for BFP. The unit is sec.
<i>-v</i>	It means to view current settings.

Example

```
> mngt bfp -e 1
> mngt bfp -s FTP
> mngt bfp -l 10
> mngt bfp -v
Current Brute Force Protection Setting:
* Enable: yes
* Service:
  - FTP:      yes
  - HTTP:     no
  - HTTPS:    no
  - TELNET:   no
  - TR069:    no
  - SSH:      no
* Maximum login failures: 10
* Penalty period: 0
```

Telnet Command: mngt cert_import

This command allows you to import a certificate to Vigor router.

Syntax

mngt cert_import local_cert *[URL]* *[password]*

mngt cert_import trusted_ca *[URL]*

Syntax Description

Parameter	Description
<i>local_cert url <URL></i> <i><password></i>	URL - Enter a URL(http://...) for downloading the certificate. The file is encrypted with the file format of "xxxx.p12". Password - Enter the password for decrypting the .p12 certificate.
<i>trusted_ca <URL></i>	URL - Enter a URL(http://...) for downloading the certificate. The file is encrypted with the file format of "xxxx.p12".

Telnet Command: mngt telnettimeout

This command allows you to configure the timeout for telnet connection.

Syntax

mngt telnettimeout *<value>*

Syntax Description

Parameter	Description
<value>	Range from 60 to 300. The default value is 300 (seconds).

Example

```
> mngt telnettimeout 100
% Telnet timeout : 100s
>
```

Telnet Command: mngt ssttimeout

This command allows you to configure the timeout for SSH connection.

Syntax

mngt ssttimeout <value>

Syntax Description

Parameter	Description
<value>	Range from 60 to 300. The default value is 300 (seconds).

Example

```
> mngt ssttimeout 200
% SSH timeout : 200s
>
```

Telnet Command: msubnet switch

This command is used to configure multi-subnet.

Syntax

msubnet switch <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <On/Off>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
<On/Off>	On means turning on the subnet for the specified LAN interface. Off means turning off the subnet.

Example

```
> msubnet switch 2 On
% LAN2          Subnet On!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet addr

This command is used to configure IP address for the specified LAN interface.

Syntax

msubnet addr <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <IP address>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
IP address	Enter the private IP address for the specified LAN interface.

Example

```
> msubnet addr 2 192.168.5.1
% Set LAN2 subnet IP address done !!!
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
% Change LAN2 HA Virtual IP from 192.168.2.2 to 192.168.5.2
```

Telnet Command: msubnet nmask

This command is used to configure net mask address for the specified LAN interface.

Syntax

msubnet nmask <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <IP address>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
IP address	Enter the subnet mask address for the specified LAN interface.

Example

```
> msubnet nmask 2 255.255.0.0
% Set LAN2 subnet mask done !!!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet status

This command is used to display current status of subnet.

Syntax

msubnet status <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.

Example

```
> msubnet status 2
% LAN2          Off: 0.0.0.0/0.0.0.0, PPP Start IP: 0.0.0.60
% DHCP server: Off
% Dhcp Gateway: 0.0.0.0, Start IP: 0.0.0.10, Pool Count: 50
```

Telnet Command: msubnet dhcp

This command allows you to enable or disable DHCP server for the subnet.

Syntax

msubnet dhcp <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <on/off>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
On/Off	On means enabling the DHCP server for the specified LAN interface. Off means disabling the DHCP server.

Example

```
> msubnet dhcp 3 off
% LAN3          Subnet DHCP Server disabled!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet nat

This command is used to configure the subnet for NAT or Routing usage.

Syntax

msubnet nat <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <on/off>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
On/Off	On - It means the subnet will be configured for NAT usage. Off - It means the subnet will be configured for Routing usage.

Example

```
> msubnet nat 2 off
% LAN2 Subnet is for Routing usage!
%Note: If you have multiple WAN connections, please be reminded to setup a
Load-Balance policy so that packets from this subnet will be forwarded to the
right WAN interface!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet gateway

This command is used to configure an IP address as the gateway used for subnet.

Syntax

msubnet gateway <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <Gateway IP>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
Gateway IP	Specify an IP address as the gateway IP.

Example

```
> msubnet gateway 2 192.168.1.13
% Set LAN2 Dhcp Gateway IP done !!!
```

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.

Telnet Command: msubnet ipcnt

This command is used to defined the total number allowed for each LAN interface.

Syntax

msubnet ipcnt <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <IP counts>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
IP counts	Specify a total number of IP address allowed for each LAN interface. The available range is from 0 to 220.

Example

```
> msubnet ipcnt 2 15  
This setting will take effect after rebooting.  
Please use "sys reboot" command to reboot the router.
```

Telnet Command: msubnet talk

This command is used to establish a route between two LAN interfaces.

Syntax

msubnet talk <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <On/Off>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
On/Off	On - It means Off - It means

Example

```
> msubnet talk 1 2 on  
% Please enable your Vlan.  
> vlan on  
VLAN is Enable!  
> msubnet talk 1 2 on  
% Enable routing between LAN1 and LAN2!  
> msubnet talk ?
```

```

% msubnet talk <1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1>
<1/2/3/4
/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1> <On/Off>
% where 1:LAN1, 2:LAN2, 3:LAN3, 4:LAN4, 5:LAN5, 6:LAN6, 7:LAN7, 8:LAN8, 9:LAN9,
10:LAN10, 11:LAN11, 12:LAN12, 13:LAN13, 14:LAN14, 15:LAN15, 16:LAN16,

>

```

Telnet Command: msubnet startip

This command is used to configure a starting IP address for DHCP.

Syntax

msubnet startip <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20><Gateway IP>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
<Gateway IP>	Type an IP address as the starting IP address for a subnet.

Example

```

> msubnet startip 2 192.168.2.90
%Set LAN2 Dhcp Start IP done !!!

This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet startip ?
DrayTek> msubnet startip ?
% msubnet startip <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1>
<Gateway IP>
% Now: LAN2 192.168.2.90; LAN3 192.168.3.10; LAN4 192.168.4.10; LAN5

Telnet Command: msubnet pppip

This command is used to configure a starting IP address for PPP connection.

Syntax

msubnet pppip <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <Start IP>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
Start IP	Enter an IP address as the starting IP address for PPP connection.

Example

```
> msubnet pppip 2 192.168.2.250
% Set LAN2 PPP(IPCP) Start IP done !!!
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> msubnet pppip ?
% msubnet pppip <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>LAN1>
<Start IP>
% Now: LAN2 192.168.2.250; LAN3 192.168.3.200; LAN4 192.168.4.200; LAN5
192.168.5.200; LAN6 192.168.6.200; LAN7 192.168.7.200; LAN8 192.168.8.200;

```

Telnet Command: msubnet nodetype

This command is used to specify the type for node which is required by DHCP option.

Syntax

msubnet nodetype <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <count>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
count	Choose the following number for specifying different node type. 1= B-node 2= P-node 4= M-node 8= H-node 0= Not specify any type for node.

Example

```
> msubnet nodetype ?
% msubnet nodetype <2/3/4/5/6> <count>
```

```
% Now: LAN2 0; LAN3 0; LAN4 0; LAN5 0; LAN6 0

% count: 1. B-node 2. P-node 4. M-node 8. H-node

> msubnet nodetype 2 1
% Set LAN2 Dhcp Node Type done !!!

> msubnet nodetype ?
% msubnet nodetype <2/3/4/5/6> <count>
% Now: LAN2 1; LAN3 0; LAN4 0; LAN5 0; LAN6 0

% count: 1. B-node 2. P-node 4. M-node 8. H-node
```

Telnet Command: msubnet primWINS

This command is used to configure primary WINS server.

Syntax

msubnet primWINS <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <WINS IP>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
WINS IP	Enter the IP address as the WINS IP.

Example

```
> msubnet primWINS 2 192.168.3.5
% Set LAN2 Dhcp Primary WINS IP done !!!

> msubnet primWINS ?
% msubnet primWINS <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>LAN1>
<WINS IP>
% Now: LAN2 192.168.3.5; LAN3 0.0.0.0; LAN4 0.0.0.0; LAN5 0.0.0.0; LAN6 0.0.0.0;

```

Telnet Command: msubnet secWINS

This command is used to configure secondary WINS server.

Syntax

msubnet secWINS <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <WINS IP>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2,

2/13/14/15/16/17/18/19/20>	3=LAN3, ...20=LAN20.
WINS IP	Enter the IP address as the WINS IP.

Example

```
> msubnet secWINS 2 192.168.3.89
% Set LAN2 Dhcp Secondary WINS IP done !!!

> msubnet secWINS ?
% msubnet secWINS <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1>
<WINS IP>
% Now: LAN2 192.168.3.89; LAN3 0.0.0.0; LAN4 0.0.0.0; LAN5 0.0.0.0; LAN6 0.0.0.0

```

Telnet Command: msubnet tftp

This command is used to set TFTP server for multi-subnet.

Syntax

msubnet tftp <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20><TFTP server name>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.
TFTP server name	Type a name to indicate the TFTP server.

Example

```
> msubnet tftp 2 publish
% Set LAN2 TFTP Server Name done !!!

> msubnet tftp ?
% msubnet tftp <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1> <TFTP
server name>

LAN20

Telnet Command: msubnet mtu

This command allows you to configure MTU value for LAN/DMZ/IP Routed Subnet.

Syntax

msubnet mtu <interface> <value>

Syntax Description

Parameter	Description
<i>interface</i>	Available settings include LAN1~LAN20, IP_Routed_Subnet.
<i>value</i>	1000 ~ 1500 (Bytes), default: 1500 (Bytes)

Example

```
> msubnet mtu LAN1 1492
Set LAN1 subnet mtu as 1492
> msubnet mtu ?
Usage:
  >msubnet mtu <interface> <value>
  <interface>: LAN1~LAN20,IP_Routed_Subnet,  <value>:    1000 ~ 1500
(Bytes), default: 1500 (Bytes)
  e.x: >msubnet mtu LAN1 1492
Current Settings:
  LAN1 MTU:          1492 (Bytes)
  LAN2 MTU:          1500 (Bytes)
  LAN3 MTU:          1500 (Bytes)
  LAN4 MTU:          1500 (Bytes)
  LAN5 MTU:          1500 (Bytes)
  ...
```

Telnet Command: msubnet leasetime

This command is used to set leasetime for multi-subnet.

Syntax

msubnet leasetime <2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> <Lease Time (sec).>

Syntax Description

Parameter	Description
<2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20> 0>	It means LAN interface. For example, 2=LAN2, 3=LAN3, ...20=LAN20.

Lease Time (sec.)	Enter a value (range: 10 to 2592000).

Example

```
> % msubnet leasetime
<1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20LAN1> <Lease Time
(sec.)>

```

Telnet Command: object ip obj

This command is used to create an IP object profile.

Syntax

object ip obj setdefault

object ip obj INDEX -v

object ip obj INDEX -n NAME

object ip obj INDEX -i INTERFACE

object ip obj INDEX -s INVERT

object ip obj INDEX -a <TYPE> <START_IP><END/MASK_IP>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
<i>-v</i>	It means to view the information of the specified object profile. Example: <i>object ip obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ip obj 9 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any

	INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ip obj 8 -i 0</i>
-s INVERT	It means to set invert selection for the object profile. INVERT=0, means disabling the function. INVERT=1, means enabling the function. Example: <i>object ip obj 3 -s 1</i>
-a <TYPE>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Rang Example: <i>object ip obj 3 -a 2</i>
<START_IP>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. Enter an IP address.
<END/MASK_IP>	Enter an IP address (different with START_IP) as the end IP address.

Example

```

> object ip obj 1 -n marketing
> object ip obj 1 -a 1 192.168.1.45
> object ip obj 1 -v
IP Object Profile 1
Name :[marketing]
Interface:[Any]
Address type:[single]
Start ip address:[192.168.1.45]
End/Mask ip address:[0.0.0.0]
Invert Selection:[0]

```

Telnet Command: object ip grp

This command is used to integrate several IP objects under an IP group profile.

Syntax

object ip grp setdefault

object ip grp INDEX -v

object ip grp INDEX -n NAME

object ip grp INDEX -i INTERFACE

object ip grp INDEX -a IP_OBJ_INDEX

Syntax Description

Parameter	Description

<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object ip grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ip grp 8 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP group. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=2, means WAN Example: <i>object ip grp 3 -i 0</i>
<i>-a IP_OBJ_INDEX</i>	It means to specify IP object profiles for the group profile. Example: <i>:object ip grp 3 -a "1 2 3 4 5"</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```

> object ip grp 2 -n First
IP Group Profile 2
Name   :[First]
Interface:[Any]
Included ip object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object ip grp 2 -i 1
> object ip grp 2 -a "1 2"
IP Group Profile 2
Name   :[First]
Interface:[Lan]
Included ip object index:
[0:][1]
[1:][2]
[2:][0]
[3:][0]
[4:][0]
[5:][0]

```

[6:][0]
[7:][0]

Telnet Command: object ipv6 obj

This command is used to create an IPv6 object profile.

Syntax

object ipv6 obj setdefault

object ipv6 obj INDEX -v

object ipv6 obj INDEX -n NAME

object ipv6 obj INDEX -i INTERFACE

object ipv6 obj INDEX -s INVERT

object ipv6 obj INDEX -e MATCH_TYPE

object ipv6 obj INDEX -a TYPE <START_IP><END_IP><Prefix Length>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified object profile.
<i>-v</i>	It means to view the information of the specified object profile. Example: <i>object ipv6 obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object ipv6 obj 9 -n bruce</i>
<i>-i INTERFACE</i>	It means to define an interface for the IP object. INTERFACE=0, means any INTERFACE=1, means LAN INTERFACE=3, means WAN Example: <i>object ipv6 obj 8 -i 0</i>
<i>-e MATCH_TYPE</i>	It means to set the match type of ipv6 object profile. MATCH_TYPE=0, means 128 bits MATCH_TYPE=1, means suffix 64 bits interface ID Example: <i>object ipv6 obj 8 -i 0</i>
<i>-s INVERT</i>	It means to set invert selection for the object profile. INVERT=0, means disabling the function. INVERT=1, means enabling the function. Example: <i>object ipv6 obj 3 -e 1</i>
<i>-a TYPE</i>	It means to set the address type and IP for the IP object profile. TYPE=0, means Mask TYPE=1, means Single TYPE=2, means Any TYPE=3, means Range TYPE=4, means MAC Example: <i>object ipv6 obj 3 -a 2</i>

<START_IP><END_IP><Prefix Length>	When the TYPE is set with 2, you have to type an IP address as a starting point and another IP address as end point. <START_IP><END_IP>: Type an IPv6 address as the start IPv6 address and another IPv6 address (different with START_IP) as the end IPv6 address. <Prefix Length>: Specify the prefix length.

Example

```
> obj ipv6 obj 3 -a 3 2607:f0d0:1002:51::4 2607:f0d0:1002:51::4
Setting saved.
> obj ipv6 obj 3 -v
IPv6 Object Profile 3
Name      :[]
Address Type:[range]
Start IPv6 Address:[2607:F0D0:1002:51::4]
End IPv6 Address:[2607:F0D0:1002:51::4]
Prefix Length:[0]
MAC Address:[00:00:00:00:00:00]
Invert Selection:[0]
Match Type:[0]
```

Telnet Command: object ipv6 grp

This command is used to integrate several IPv6 objects under an IPv6 group profile.

Syntax

object ipv6 grp setdefault

object ipv6 grp INDEX -v

object ipv6 grp INDEX -n NAME

object ipv6 grp INDEX -a IP_OBJ_INDEX

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
-v	It means to view the information of the specified group profile. Example: <i>object ipv6 grp 1 -v</i>
-n NAME	It means to define a name for the IP group. NAME: Type a name with less than 15 characters. Example: <i>object ipv6 grp 8 -n bruce</i>
-a IP_OBJ_INDEX	It means to specify IP object profiles for the group profile. Example: <i>:object ipv6 grp 3 -a 1 2 3 4 5</i> The IP object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
> object ipv6 grp 1 -n marketingtest
IPv6 Group Profile 1
Name      :[marketingtest]
Included ip object index:
```

```

[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object ipv6 grp 1 -a 1 2 3 4 5
IPv6 Group Profile 1
Name :[marketingtest]
Included ip object index:
[0:][1]
[1:][2]
[2:][3]
[3:][4]
[4:][5]
[5:][0]
[6:][0]
[7:][0]

```

Telnet Command: object country obj

This command is used to create country object profile.

Syntax

```

object country set INDEX -v
object country set INDEX -n NAME
object country set INDEX -a COUNTRY_INDEX
object country activate
object country setdefault
object country list

```

Syntax Description

Parameter	Description
<i>INDEX</i>	It means the index number of the specified country object profile (1 to 32).
<i>COUNTRY_INDEX</i>	It means the code number of a country. To get the detailed information of the code number, use "object country list" to get the one you need.
<i>activate</i>	It means to activate the country object profile.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>list</i>	Displays a list of country with code number. For example, "222" means "Taiwan"; "241" means "United States".

Example

```

> object country set 1 -n Best
Country object Profile 1
Name :[Best]

```

```

Included country index:
Set ok!
> object country set 1 -a 222
Country object Profile 1
Name   :[Best]
Included country index:
[0:][222] Taiwan

Set ok!
>

```

Telnet Command: object service obj

This command is used to create service object profile.

Syntax

object service obj setdefault

object service obj INDEX -v

object service obj INDEX -n NAME

object service obj INDEX -p PROTOCOL

object service obj INDEX -s CHK <START_P><END_P>

object service obj INDEX -d CHK <START_P><END_P>

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified service object profile.
<i>-v</i>	It means to view the information of the specified service object profile. Example: <i>object service obj 1 -v</i>
<i>-n NAME</i>	It means to define a name for the IP object. NAME: Type a name with less than 15 characters. Example: <i>object service obj 9 -n bruce</i>
<i>-i PROTOCOL</i>	It means to define a PROTOCOL for the service object profile. PROTOCOL =0, means any PROTOCOL =1, means ICMP PROTOCOL =2, means IGMP PROTOCOL =6, means TCP PROTOCOL =17, means UDP PROTOCOL =58, means ICMPv6, PROTOCOL =255, means TCP/UDP Other values mean other protocols. Example: <i>object service obj 8 -i 0</i>
<i>CHK</i>	It means the check action for the port setting. 0=equal(=), when the starting port and ending port values are the same, it indicates one port; when the starting port and ending port values are different, it indicates a range for the port and available for this service type. 1=not equal(!=), when the starting port and ending port values are the same, it indicates all the ports except the port defined here; when the starting port and ending port values are different, it

	indicates that all the ports except the range defined here are available for this service type. 2=larger(>), the port number greater than this value is available.. 3=less(<), the port number less than this value is available for this profile.
-s CHK <START_P><END_P>	It means to set source port check and configure port range (1~65565) for TCP/UDP. START_P: Enter a port number to indicate the starting source port. END_P: Enter a port number to indicate the ending source port. Example: <i>object service obj 3 -s 0 100 200</i>
-d CHK <START_P><END_P>	It means to set destination port check and configure port range (1~65565) for TCP/UDP. START_P: Enter a port number to indicate the starting destination port. END_P: Enter a port number to indicate the ending destination port. Example: <i>object service obj 3 -d 1 100 200</i>

Example

```

> object service obj 1 -n limit
> object service obj 1 -p 255
> object service obj 1 -s 1 120 240
> object service obj 1 -d 1 200 220
> object service obj 1 -v
Service Object Profile 1
Name      :[limit]
Protocol:[TCP/UDP]
Source port check action:[!=]
Source port range:[120~240]
Destination port check action:[!=]
Destination port range:[200~220]
>

```

Telnet Command: object service grp

This command is used to integrate several service objects under a service group profile.

Syntax

object service grp setdefault

object service grp INDEX -v

object service grp INDEX -n NAME

object service grp INDEX -a SER_OBJ_INDEX

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number of the specified group profile.
<i>-v</i>	It means to view the information of the specified group profile. Example: <i>object service grp 1 -v</i>
<i>-n NAME</i>	It means to define a name for the service group. NAME: Type a name with less than 15 characters.

	Example: <i>object service grp 8 -n bruce</i>
-a <i>SER_OBJ_INDEX</i>	It means to specify service object profiles for the group profile. Example: <i>:object service grp 3 -a 1 2 3 4 5</i> The service object profiles with index number 1,2,3,4 and 5 will be group under such profile.

Example

```
>object service grp 1 -n Grope_1
Service Group Profile 1
Name   :[Grope_1]
Included service object index:
[0:][0]
[1:][0]
[2:][0]
[3:][0]
[4:][0]
[5:][0]
[6:][0]
[7:][0]

> object service grp 1 -a 1 2

Telnet Command: object kw

This command is used to create keyword profile.

Syntax

object kw obj setdefault

object kw obj show PAGE

object kw obj INDEX -v

object kw obj INDEX -n NAME

object kw obj INDEX -a CONTENTS

object kw obj INDEX -c

Syntax Description

Parameter	Description
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>show PAGE</i>	It means to show the contents of the specified profile. PAGE: Enter the page number.

<i>show</i>	It means to show the contents for all of the profiles.
<i>INDEX</i>	It means the index number of the specified keyword profile.
<i>-v</i>	It means to view the information of the specified keyword profile.
<i>-n NAME</i>	It means to define a name for the keyword profile. NAME: Type a name with less than 15 characters.
<i>-a CONTENTS</i>	It means to set the contents for the keyword profile. Example: <i>object kw obj 40 -a test</i>
<i>-c</i>	It means to clear the content of keyword object profile. Example: <i>object kw obj 40 -c</i>

Example

```
> object kw obj 1 -n children
Profile 1
Name  :[children]
Content:[]
> object kw obj 1 -a gambling
Profile 1
Name  :[children]
Content:[gambling]

> object kw obj 1 -v
Profile 1
Name  :[children]
Content:[gambling]
```

Telnet Command: object fe

This command is used to create File Extension Object profile.

Syntax

object fe show

object fe setdefault

object fe obj INDEX -v

object fe obj INDEX -n NAME

object fe obj INDEX -e CATEGORY|FILE_EXTENSION

object fe obj INDEX -d CATEGORY|FILE_EXTENSION

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>INDEX</i>	It means the index number (from 1 to 8) of the specified file extension object profile.
<i>-v</i>	It means to view the information of the specified file extension object profile.
<i>-n NAME</i>	It means to define a name for the file extension object profile. NAME: Type a name with less than 15 characters.
<i>-e</i>	It means to enable the specific CATEGORY or FILE_EXTENSION.

-d	It means to disable the specific CATEGORY or FILE_EXTENSION
CATEGORY FILE_EXTENSION	CATEGORY: Image, Video, Audio, Java, ActiveX, Compression, Execution Example: <i>object fe obj 1 -e Image</i> FILE_EXTENSION: ".bmp", ".dib", ".gif", ".jpeg", ".jpg", ".jpg2", ".jp2", ".pct", ".pcx", ".pic", ".pict", ".png", ".tif", ".tiff", ".asf", ".avi", ".mov", ".mpe", ".mpeg", ".mpg", ".mp4", ".qt", ".rm", ".wmv", ".3gp", ".3gpp", ".3gpp2", ".3g2", ".aac", ".aiff", ".au", ".mp3", ".m4a", ".m4p", ".ogg", ".ra", ".ram", ".vox", ".wav", ".wma", ".class", ".jad", ".jar", ".jav", ".java", ".jcm", ".js", ".jse", ".jsp", ".jtk", ".alx", ".apb", ".axs", ".ocx", ".olb", ".ole", ".tlb", ".viv", ".vrml", ".ace", ".arj", ".bzip2", ".bz2", ".cab", ".gz", ".gzip", ".rar", ".sit", ".zip", ".bas", ".bat", ".com", ".exe", ".inf", ".pif", ".reg", ".scr", ".torrent". Example: <i>object fe obj 1 -e .bmp</i>

Example

```
> object fe obj 1 -n music
> object fe obj 1 -e Audio
> object fe obj 1 -v
Profile Index: 1
Profile Name:[music]

Telnet Command: object sms

This command is used to create short message object profile.

Syntax

object sms show

object sms setdefault

object sms obj INDEX -v

object sms obj INDEX -n NAME

object sms obj INDEX -s Service Provider

object sms obj INDEX -u Username

object sms obj INDEX -p Password

object sms obj INDEX -q Quota

object sms obj INDEX -i Interval

object sms obj INDEX -l URL

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 10) of the specified SMS object profile.
-v	It means to view the information of the specified SMS object profile.
-n <i>[NAME]</i>	It means to define a name for the SMS object profile. NAME: Type a name with less than 15 characters.
-s <i>[Service Provider]</i>	It means to specify the number of the service provider which offers the service of SMS. Different numbers represent different service provider. 0 : kotsms.com.tw (TW) 2 : textmarketer.co.uk (UK) 4 : messagemedia.co.uk (UK) 5 : bulksms.com (INT) 6 : bulksms.co.uk (UK) 7 : bulksms.2way.co.za (ZA) 8 : bulksms.com.es (ES) 9 : usa.bulksms.com (US) 10 : bulksms.de (DE) 11 : www.pswin.com (EU) 12 : www.messagebird.com (EU) 13 : www.lusosms.com (EU) 14 : www.vibeactivemedia.com (UK)
-u <i>[Username]</i>	It means to define a user name for the SMS object profile. Type a user name that the sender can use to register to selected SMS provider.
-p <i>[Password]</i>	It means to define a password for the SMS object profile. Type a password that the sender can use to register to selected SMS provider.
-q <i>[Quota]</i>	Enter the number of the credit that you purchase from the service provider. Note that one credit equals to one SMS text message on the standard route.
-l <i>[Interval]</i>	It means to set the sending interval for the SMS to be delivered. Enter the shortest time interval for the system to send SMS.

-I [URL]	It means to set the URL for Custom 1 and Custom 2 profiles. The profile name for Custom 1 and Custom 2 are defined in default and can not be changed.

Example

```
> object sms obj 1 -n CTC
> object sms obj 1 -n CTC
> object sms obj 1 -s 0
> object sms obj 1 -u carrie
> object sms obj 1 -p 19971125cm
> object sms obj 1 -q 2
> object sms obj 1 -i 50
> object sms obj 1 -v
Profile Index: 1
Profile Name:[CTC]
SMS Provider:[kotsms.com.tw (TW)]
Username:[carrie]
Password:[*****]
Quota:[2]
Sending Interval:[50(seconds)]
```

Telnet Command: object mail

This command is used to create mail object profile.

Syntax

object mail show

object mail setdefault

object mail obj INDEX -v

object mail obj INDEX -n Profile Name

object mail obj INDEX -s SMTP Server

object mail obj INDEX -I Use SSL

object mail obj INDEX -m SMTP Port

object mail obj INDEX -a Sender Address

object mail obj INDEX -t Authentication

object mail obj INDEX -u Username

object mail obj INDEX -p Password

object mail obj INDEX -i Sending Interval

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 10) of the specified mail object profile.
<i>-v</i>	It means to view the information of the specified mail object profile.
<i>-n [Profile Name]</i>	It means to define a name for the mail object profile. Profile Name: Type a name with less than 15 characters.
<i>-s [SMTP Server]</i>	It means to set the IP address of the mail server.
<i>-I [Use SSL]</i>	It means to use port 465 for SMTP server for some e-mail server uses https as the transmission method. 0 - disable 1 - enable to use the port number.
<i>-m [SMTP Port]</i>	It means to set the port number for SMTP server.
<i>-a [Sender Address]</i>	It means to set the e-mail address (e.g., johnwash@abc.com.tw) of the sender.

<i>-t Authentication</i>	The mail server must be authenticated with the correct username and password to have the right of sending message out. 0 – disable 1 – enable to use the port number.
<i>-u Username</i>	Type a name for authentication. The maximum length of the name you can set is 31 characters.
<i>-p Password</i>	Type a password for authentication. The maximum length of the password you can set is 31 characters.
<i>-i Sending Interval</i>	Define the interval for the system to send the SMS out. The unit is second.

Example

```
> object mail obj 1 -n buyer
> object mail obj 1 -n buyer
> object mail obj 1 -s 192.168.1.98
> object mail obj 1 -m 25
> object mail obj 1 -t 1
> object mail obj 1 -u john
> object mail obj 1 -p happy123456
> object mail obj 1 -i 25
> object mail obj 1 -v
Profile Index: 1
Profile Name:[buyer]
SMTP Server:[192.168.1.98]
SMTP Port:[25]
Sender Address:[]
Use SSL:[disable]
Authentication:[enable]
Username:[john]
Password:[*****]
Sending Interval:[25(seconds)]
```

Telnet Command: object noti

This command is used to create notification object profile.

Syntax

object noti show

object noti setdefault

object noti obj INDEX -v

object noti obj INDEX -n Profile Name

object mail obj INDEX -e Category Status

object mail obj INDEX -d Category Status

Syntax Description

Parameter	Description
<i>show</i>	It means to show the contents for all of the profiles.
<i>setdefault</i>	It means to return to default settings for all profiles.
<i>[INDEX]</i>	It means the index number (from 1 to 8) of the specified notification object profile.
<i>-v</i>	It means to view the information of the specified notification object profile.
<i>-n [Profile Name]</i>	It means to define a name for the notification object profile. Profile Name: Type a name with less than 15 characters.

-e	It means to enable the status of specified category.
-d	It means to disable the status of specified category.
[Category]	Available categories are: 1: WAN; 2: VPN Tunnel; 3: Temperature Alert; 4: WAN Budget; 5: CVM; 6: High Availability
[status]	For WAN - 1: Disconnected; 2: Reconnected. For VPN Tunnel - 1: Disconnected; 2: Reconnected. For Temperature Alert - 1: Out of Range. For WAN Budget - 1: Limit Reached. For CVM - 1: CPE Offline; 2: Backup Fail; 3: Restore Fail; 4: FW Update Fail; 5: VPN Profile Setup Fail. For High Availability - 1: Failover Occurred, Config Sync Fail, and Router Unstable

Example

```
> object noti obj 1 -n markbei
> object noti obj 1 -e 1 1
> object noti obj 1 -e 2 1
> object noti obj 1 -e 5 3
> object noti obj 1 -v
> object noti obj 1 -e 1 1
> object noti obj 1 -e 2 1
> object noti obj 1 -e 5 3
> object noti obj 1 -v
Profile Index: 1
Profile Name:[]
      Category              Status
WAN          [v]Disconnected    [ ]Reconnected
VPN Tunnel   [v]Disconnected    [ ]Reconnected
Temperature Alert [ ]Out of Range
WAN Budget Alert [ ]Limit Reached
CVM Alert    [ ]CPE Offline
              [ ]CPE Config Backup Fail
              [v]CPE Config Restore Fail
              [ ]CPE Firmware Fpgrade Fail
              [ ]CPE VPN Profile Setup Fail
High Availability [ ]Failover Occurred
                  Config Sync Fail
                  Router Unstable
```

Telnet Command: object schedule

This command is used to create schedule object profile.

Syntax

object schedule set *INDEX option*

object schedule view

object schedule setdefault

Syntax Description

Parameter	Description
<i>set</i>	It means to set the schedule profile.
<i>[INDEX]</i>	It means the index number (from 1 to 15) of the specified object profile.
<i>option</i>	Available options for schedule.
<i>-e [value]</i>	It means to enable the schedule setup. 0 - disable 1 - enable
<i>-c [comment]</i>	It means to set brief description for the specified profile. The length range of the comment: 0 ~ 32 characters.
<i>-D [year][month][day]</i>	It means to set the starting date of the profile. [year] - Must be between 2000-2049. [month] - Must be between 1-12. [day] - Must be between 1-31. For example: To set Start Date 2015/10/6, type > object schedule set 1 -D "2015 10 6"
<i>-T [hour][minute]</i>	It means to set the starting time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Start Time 10:20, type > object schedule set 1 -T "10 20"
<i>-d [hour][minute]</i>	It means to set the duration time of the profile. [hour] - Must be between 0-23. [minute] - Must be between 0-59. For example: To set Duration Time 3:30, type > object schedule set 1 -d "3 30"
<i>-a [value]</i>	It means to set the action used for the profile. [value] - 0:Force On, 1:Force Down, 2:Enable Dial-On-Demand, 3:Disable Dial-On-Demand
<i>-I [value]</i>	It means to set idle time. [value] - Must be between 0-255(minute). The default is 0.
<i>-h [option] [day]</i>	Set how often the schedule will be applied. [option] - 0: Once, 1: Weekdays [day] - Sun, Mon, Tue, Wed, Thu, Fri, Sat If the [option] set Weekdays, then must select which days of Week. example: To select Sunday, Monday, Thursday, type > object schedule set 1 -h "1 Sun Mon Thu"
<i>view [INDEX]</i>	It means to show the content of the profile.

<i>setdefault</i>	It means to return to default settings for all profiles.

Example

```
> object schedule set 1 -e 1
> object schedule set 1 -c Working
> object schedule set 1 -D "2016 11 8"
> object schedule set 1 -T "8 1"
> object schedule set 1 -d "2 30"
> object schedule set 1 -a 0
> object schedule set 1 -h "1 Mon Wed"
> object schedule view 1
Index No.1

-----
[v] Enable Schedule Setup
    Comment [ Working ]
    Start Date (yyyy-mm-dd) [ 2016 ]-[ 11 ]-[ 8 ]
    Start Time (hh:mm)      [ 8 ]:[ 1 ]

        [ ]Sun [v]Mon [ ]Tue [v]Wed [ ]Thu [ ]Fri [ ]Sat
>
```

Telnet Command: port

This command allows users to set the speed for specific port of the router.

Syntax

port <1, 2, 3, 4, 5, 6, all> <AN, 100F, 100H, 10F, 10H, status>

port <wan1, wan2, wan3, wan4> <AN, 1000F, 100F, 100H, 10F, 10H, status>

port status

port sniff <on,off,port,txrx,restart,status>

port jumbo

port wanfc

Syntax Description

Parameter	Description
<1, 2, 3, 4, 5, 6, all> <wan1, wan2, wan3, wan4>	It means the number of LAN port and WAN port.
AN, 100F, 100H, 10F, 10H,	It means the physical type for the specific port. AN: auto-negotiate. 100F: 100M Full Duplex.

	100H: 100M Half Duplex. 10F: 10M Full Duplex. 10H: 10M Half Duplex.
<i>status</i>	It means to view the Ethernet port status.
<i>wanfc</i>	It means to set WAN flow control.

Example

```
> port 1 100F
%Set Port 1 Force speed 100 Full duplex OK !!!
```

Telnet Command: portmaptime

This command allows you to set a time of keeping the session connection for specified protocol.

Syntax

portmaptime [*-<command>* *<parameter>* | ...]

Syntax Description

Parameter	Description
[<i><command></i> <i><parameter></i> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>-t <sec></i>	It means "TCP" protocol. <sec>: Type a number to set the TCP session timeout.
<i>-u <sec></i>	It means "UDP" protocol. <sec>: Type a number to set the UDP session timeout.
<i>-i <sec></i>	It means "IGMP" protocol. <sec>: Type a number to set the IGMP session timeout.
<i>-w <sec></i>	It means "TCP WWW" protocol. <sec>: Type a number to set the TCP WWW session timeout.
<i>-s <sec></i>	It means "TCP SYN" protocol. <sec>: Type a number to set the TCP SYN session timeout.
<i>-f</i>	It means to flush all portmaps (useful for diagnostics).
<i>-l <List></i>	List all settings.

Example

```
> portmaptime -t 86400 -u 300 -i 10
> portmaptime -l
----- Current setting -----
TCP Timeout : 86400 sec.
UDP Timeout : 300 sec.
IGMP Timeout : 10 sec.
TCP WWW Timeout: 60 sec.
TCP SYN Timeout: 60 sec.
```

Telnet Command: prn

This command allows you to view current status (interface and driver) of USB printer.

Syntax

prn status

prn debug

Example

```
> prn status
Interface: USB bus 2.0
Printer: NotReady

> prn debug
conn[0] :
none
conn[1] :
none
conn[2] :
none
conn[3] :
none
LPD_data_total=0

usbip_ptr=0
UsbPrintReady=0, UsbIsPrinting=0
```

Telnet Command: qos setup

This command allows user to set general settings for QoS.

Syntax

qos setup [-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-h	Type it to display the usage of this command.
-W <1~7>	It means to specify WAN interface. The default is WAN1. 1: WAN1; 2:WAN2;...;7:WAN7
-m <mode>	It means to define which traffic the QoS control settings will apply to and enable QoS control. 0: disable. 1: in, apply to incoming traffic only. 2: out, apply to outgoing traffic only. 3: both, apply to both incoming and outgoing traffic. Default is enable (for outgoing traffic).
-i <bandwidth>	It means to set inbound bandwidth in kbps (Ethernet WAN only) The available setting is from 1 to 100000.
-o <bandwidth>	It means to set outbound bandwidth in kbps (Ethernet WAN only). The available setting is from 1 to 100000.
-r <index:ratio>	It means to set ratio for class index, in %.

-u <mode>	It means to enable bandwidth control for UDP. 0: disable 1: enable Default is disable.
-p <ratio>	It means to enable bandwidth limit ratio for UDP.
-t <mode>	It means to enable/disable Outbound TCP ACK Prioritize. 0: disable 1: enable
-V	Show all the settings.
-I <bandwidth>	It means the minimum available non-VoIP Inbound Bandwidth when VoIP is detected (Kbps). <bandwidth>: Enter a value. Default value: half of WAN inbound bandwidth.
-O <bandwidth>	It means the minimum available non-VoIP Outbound Bandwidth when VoIP is detected (Kbps). <bandwidth>: Enter a value. Default value: half of WAN outbound bandwidth.
-v <0/1>	It means to adjust to minimum In/Out bandwidth setting (or half QoS bandwidth). 0: Auto bandwidth adjustment. 1: When VoIP detected, QoS In/Out bandwidth will be adjusted to minimum values.
-D	Set all to factory default (for all WANs).
[...]	It means that you can Enter several commands in one line.

Example

```
> qos setup -W 2 -m 3 -i 9500 -o 8500 -r 3:20 -u 1 -p 50 -t 1
Setup WAN2 !!!!
WAN2 QoS mode is both
inbound bandwidth set to 9500
outbound bandwidth set to 8500
WAN2 class 3 ratio set to 20
WAN2 udp bandwidth control set to enable
WAN2 udp bandwidth limit ratio set to 50
WAN2 Outbound TCP ACK Prioritize set to enable
QoS WAN2 set complete; restart QoS
>
```

Telnet Command: qos class

This command allows user to set QoS class.

Syntax

qos class -c <no> -<a|e|d> <no>[-<command> <parameter> | ...]

Syntax Description

Parameter	Description
[<command> <parameter> ...]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
-h	Type it to display the usage of this command.
-c <no>	Specify the inde number for the class.

	Available value for <no> contains 1, 2 and 3. The default setting is class 1.
-n <name>	It means to type a name for the class.
-a	It means to add rule for specified class.
-e <no>	It means to edit specified rule. <no>: Enter the index number for the rule.
-d <no>	It means to delete specified rule. <no>: Enter the index number for the rule.
-m <mode>	It means to enable or disable the specified rule. 0: disable, 1: enable
-l <addr>	Set the local address. <i>Addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9". <i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "-l 172.16.3.9: 172.16.3.50." <i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-l 172.16.3.9:255.255.0.0". <i>any</i> - It means Any address. Simple type "-l" to specify any address for this command.
-r <addr>	Set the remote address. <i>addr1</i> - It means Single address. Please specify the IP address directly, for example, "-l 172.16.3.9". <i>addr1:addr2</i> - It means Range address. Please specify the IP addresses, for example, "-l 172.16.3.9: 172.16.3.50." <i>addr1:subnet</i> - It means the subnet address with start IP address. Please Enter the subnet and the IP address, for example, "-l 172.16.3.9:255.255.0.0". <i>any</i> - It means Any address. Simple type "-l" to specify any address for this command.
-p <DSCP id>	Specify the ID.
-s <Service type>	Specify the predefined service type by typing the number. The available types are listed as below: 1:ANY 2:DNS 3:FTP 4:GRE 5:H.323 6:HTTP 7:HTTPS 8:IKE 9:IPSEC-AH 10:IPSEC-ESP 11:IRC 12:L2TP 13:NEWS 14:NFS 15:NNTP 16:PING 17:POP3 18:PPTP 19:REAL-AUDIO 20:RTSP 21:SFTP 22:SIP 23:SMTP 24:SNMP 25:SNMP-TRAPS 26:SQL-NET 27:SSH 28:SYSLOG 29:TELNET 30:TFTP
-u <Service type>	Specify the user defined service type by typing the number (1 to 40).
-S <d/s>	Show the content for specified DSCP ID/Service type.
-V <1/2/3>	Show the rule in the specified class.
[...]	It means that you can Enter several commands in one line.

Example

```
> qos class -c 2 -n draytek -a -m 1 -l 192.168.1.50:192.168.1.80
```

Following setting will set in the class2

class 2 name set to draytek

Add a rule in class2

Class2 the 1 rule enabled

Set local address type to Range, 192.168.1.50:192.168.1.80

Telnet Command: qos type

This command allows user to configure protocol type and port number for QoS.

Syntax

qos type [-a <service name> | -e <no> | -d <no>].

Syntax Description

Parameter	Description
-a <name>	It means to add rule.
-e <no>	It means to edit user defined service type. "no" means the index number. Available numbers are 1~40.
-d <no>	It means to delete user defined service type. "no" means the index number. Available numbers are 1~40.
-n <name>	It means the name of the service.
-t <type>	It means protocol type. 6: tcp(default) 17: udp 0: tcp/udp <1~254>: other
-p <port>	It means service port. The typing format must be [start:end] (ex., 510:330).
-l	List user defined types. "no" means the index number. Available numbers are 1~40.

Example

```
> qos type -a draytek -t 6 -p 510:1330

service name set to draytek
service type set to 6:TCP
Port type set to Range
Service Port set to 510 ~ 1330
>
```

Telnet Command: qos voip

This command allows user to enable or disable the QoS for VoIP and RTP.

Syntax

qos voip [on/off]

Syntax Description

Parameter	Description
on/off	On - Enable the QoS for VoIP. Off - Disable th QoS for VoIP.

Example

```
> qos voip off
QoS for VoIP: Disable; SIP Port: 5060
>
```

Telnet Command: quit

This command can exit the telnet command screen.

Telnet Command: show lan

This command displays current status of LAN IP address settings.

Example

```
> show lan
The LAN settings:
The LAN settings:
Status  IP            Mask            DHCP Start IP    Pool Gateway
-----

Telnet Command: show dmz

This command displays current status of DMZ host.

Example

```
> show dmz
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable 0.0.0.0

%      WAN2 DMZ mapping status:
Index  Status  WAN2 aux IP    Private IP
-----
1      Disable 0.0.0.0
2      Disable 192.168.1.55

%      WAN3 DMZ mapping status:
Index  Status  WAN3 aux IP    Private IP
-----
1      Disable 0.0.0.0

%      WAN4 DMZ mapping status:
Index  Status  WAN4 aux IP    Private IP
-----
1      Disable 0.0.0.0

%      WAN5 DMZ mapping status:
Index  Status  WAN5 aux IP    Private IP
-----
1      Disable 169.254.0.1
```

```
%      WAN6 DMZ mapping status:
Index  Status  WAN6 aux IP    Private IP
```

```
-----
1      Disable 0.0.0.0
```

```
%      WAN7 DMZ mapping status:
```

```
Index  Status  WAN7 aux IP    Private IP
```

```
-----
1      Disable 0.0.0.0
```

Telnet Command: show dns

This command displays current status of DNS setting

Example

```
> show dns
%%      Domain name server settings:
% LAN1  Primary DNS: [Not set]
% LAN1  Secondary DNS: [Not set]

% LAN2  Primary DNS: [Not set]
% LAN2  Secondary DNS: [Not set]

% LAN3  Primary DNS: [Not set]
% LAN3  Secondary DNS: [Not set]
...
...
% LAN20 Primary DNS: [Not set]
% LAN20 Secondary DNS: [Not set]
```

Telnet Command: show openport

This command displays current status of open port setting.

Example

```
> show openport
%%      Openport settings:
Index  Status  Comment          Local IP Address
*****
1.     Enable  CARR_1           192.168.1.9
Total 1 items listed.
>
```

Telnet Command: show nat

This command displays current status of NAT.

Example

```
> show nat
Port Redirection Running Table:

Index  Protocol  Public Port  Private IP    Private Port
1       0          0  0.0.0.0       0
```

```

2          0          0  0.0.0.0          0

130        0          0  0.0.0.0          0
Protocol: 0 = Disable, 6 = TCP, 17 = UDP
>

```

Telnet Command: show portmap

This command displays the table of NAT Active Sessions.

Example

```

> show portmap
-----
P      Private_IP: Port      Pseudo_IP: Port      Peer_IP:Port ST LastTime
DPDK
-----
Total Portmap Session:0
>

```

Telnet Command: show pmtime

This command displays the reuse time of NAT session.

Level0: It is the default setting.

Level1: It will be applied when the NAT sessions are smaller than 25% of the default setting.

Level2: It will be applied when the NAT sessions are smaller than the eighth of the default setting.

Example

```

> show pmtime

Level0 TCP=86400010 UDP=180010 ICMP=10010
Level1 TCP=600000 UDP=90000 ICMP=7000
Level2 TCP=60000 UDP=30000 ICMP=5000

```

Telnet Command: show session

This command displays current status of current session.

Example

```
> show session
% Maximum Session Number: 150000
% Maximum Session Usage: 0
% Current Session Usage: 0
% Current Session Used(include waiting for free): 0
% WAN1 Current Session Usage: 0
% WAN2 Current Session Usage: 0
% WAN3 Current Session Usage: 0
% WAN4 Current Session Usage: 0
% WAN5 Current Session Usage: 0
% WAN6 Current Session Usage: 0
% WAN7 Current Session Usage: 0
## Session Create this Sec: 0
## Session Create Peak Sec: 0
```

Telnet Command: show status

This command displays current status of LAN and WAN connections.

Example

```
> show status
System Uptime:190:55:34
LAN Status
Primary DNS:8.8.8.8      Secondary DNS:8.8.4.4
IP Address:192.168.1.1   Tx Rate:272305   Rx Rate:64693

WAN 1 Status: Disconnected

```

Telnet Command: show traffic

This command can display traffic graph for WAN1 to WAN4, transmitted bytes, received bytes and sessions.

Syntax

show traffic <wan1/wan2~wan7><tx/rx> <weekly>

show traffic *<ipaddr>* *<tx/rx>*

show traffic session <weekly>

Example

[illegible]

Telnet Command: show clienttraffic

This command displays packet information for specified external device.

Syntax

show clienttraffic *<device index><wan# or lan#><tx/rx> <weekly>*

Syntax Description

Parameter	Description
<device index>	Enter the device index (01 - 30) in double-digit (ex: 01, 02) for external device. Use “switch list” to check which VigorSwitch connects to this router. Then, Enter the index number of this VigorSwitch in this field.
<wan# or lan#>	wan# - Specify WAN interface (WAN1 to WAN2) for Vigor router. lan#- Specify LAN interface (LANA / LANB) for Vigor router.
<tx/rx>	Tx - Indicate transmitted data. Rx - Indicate received data.
<weekly>	Display the transmitted data or received data collected weekly.

Telnet Command: show statistic

This command displays statistics for WAN interface.

Syntax

show statistic

show statistic reset <interface>

Syntax Description

Parameter	Description
<i>reset</i>	It means to reset the transmitted/received bytes to Zero.
<i>interface</i>	It means to specify WAN1 ~WAN5 interface for displaying related statistics.

Example

```
> show statistic
WAN1 total TX: 0 Bytes ,RX: 0 Bytes
WAN2 total TX: 0 Bytes ,RX: 0 Bytes
WAN3 total TX: 0 Bytes ,RX: 0 Bytes
WAN4 total TX: 0 Bytes ,RX: 0 Bytes
WAN5 total TX: 0 Bytes ,RX: 0 Bytes
WAN6 total TX: 0 Bytes ,RX: 0 Bytes
WAN7 total TX: 0 Bytes ,RX: 0 Bytes
WAN8 total TX: 0 Bytes ,RX: 0 Bytes
WAN9 total TX: 0 Bytes ,RX: 0 Bytes
WAN10 total TX: 0 Bytes ,RX: 0 Bytes
WAN11 total TX: 0 Bytes ,RX: 0 Bytes
WAN12 total TX: 0 Bytes ,RX: 0 Bytes
WAN13 total TX: 0 Bytes ,RX: 0 Bytes
WAN14 total TX: 0 Bytes ,RX: 0 Bytes
WAN15 total TX: 0 Bytes ,RX: 0 Bytes
WAN16 total TX: 0 Bytes ,RX: 0 Bytes
WAN17 total TX: 0 Bytes ,RX: 0 Bytes
WAN18 total TX: 0 Bytes ,RX: 0 Bytes
WAN19 total TX: 0 Bytes ,RX: 0 Bytes
WAN20 total TX: 0 Bytes ,RX: 0 Bytes
WAN21 total TX: 0 Bytes ,RX: 0 Bytes
WAN22 total TX: 0 Bytes ,RX: 0 Bytes
WAN23 total TX: 0 Bytes ,RX: 0 Bytes
>
```

Telnet Command: `srv dhcp dhcp2`

This command is used for configuring which method (LAN interface or MAC address) that the DHCP server on IP routed LAN shall use for assigning an IP address to the IP routed LAN clients.

Syntax

`srv dhcp dhcp2 [-<command> <parameter> | ... ]`

Syntax Description

Parameter	Description
<code>[<command> <parameter> ...]</code>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
<code>-l <enable></code>	The DHCP server assigns the IP addresses to the clients via LAN port. <enable> : Enter 0 (disable) or 1 (enable).
<code>-m <enable></code>	The DHCP server assigns the IP addresses to the clients via MAC address configuration. <enable> : Enter 0 (disable) or 1 (enable).
<code>-e <id></code>	Turn on the flag of LAN 1 or LAN 2 if LAN port is enabled. <id>: Enter 1 or 2.
<code>-d <id></code>	Turn off the flag of LAN port 1 or LAN port 2. <id>: Enter 1 or 2.
<code>-v</code>	View current status.

Example

```
> srv dhcp dhcp2 -l 1 -e 1,2
> srv dhcp dhcp2 -v
2nd DHCP server flag status --
  Server works on specified MAC address: ON
  Server works on specified LAN port: ON
  Port 3 flag: ON
  Port 4 flag: ON
>
```

Telnet Command: `srv dhcp public`

This command allows users to configure DHCP server for second subnet.

Syntax

`srv dhcp public start <IP address>`

`srv dhcp public cnt <IP counts>`

`srv dhcp public status`

`srv dhcp public add <MAC Addr XX-XX-XX-XX-XX-XX>`

`srv dhcp public del <MAC Addr XX-XX-XX-XX-XX-XX/all/ALL>`

Syntax Description

Parameter	Description
<code>start</code>	It means the starting point of the IP address pool for the DHCP server.
<code>IP address</code>	It means to specify an IP address as the starting point in the IP address pool.

<i>cnt</i>	It means the IP count number.
<i>IP counts</i>	It means to specify the number of IP addresses in the pool. The maximum is 10.
<i>status</i>	It means the execution result of this command.
<i>add</i>	It means creating a list of hosts to be assigned.
<i>del</i>	It means removing the selected MAC address.
<i>MAC Addr</i>	It means to specify MAC Address of the host.
<i>all/ALL</i>	It means all of the MAC addresses.

Example

```
> srv dhcp public cnt 3
> srv dhcp public add 14-49-BC-0D-1F-48
> srv dhcp public status
Index    MAC Address
```

Telnet Command: **srv dhcp dns1**

This command allows users to set Primary IP Address for DNS Server in LAN.

Syntax

srv dhcp dns1 <lan1~lan20> <DNS IP address>

Syntax Description

Parameter	Description
<lan1~lan20>	It means to sepcify the LAN interface for setting the DNS server. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).
<DNS IP address>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> srv dhcp dns1 lan1 192.168.1.100
% srv dhcp dns1 lan1 <DNS IP address>
% Now: 192.168.1.100
>
```

Telnet Command: **srv dhcp dns2**

This command allows users to set Secondary IP Address for DNS Server in LAN.

Syntax

srv dhcp dns2 <lan1~lan20> <DNS IP address>

Syntax Description

Parameter	Description
<lan1~lan20>	It means to specify the LAN interface for setting the DNS server.
<DNS IP address>	It means the IP address that you want to use as DNS1. Note: The IP Routed Subnet DNS must be the same as NAT Subnet DNS).

Example

```
> srv dhcp dns2 10.1.1.1
% srv dhcp dns2 <DNS IP address>
% Now: 10.1.1.1
(IP Routed Subnet dns same as NAT Subnet dns)
```

Telnet Command: **srv dhcp frcdnsmanl**

This command can force the router to invoke DNS Server IP address.

Syntax

srv dhcp frcdnsmanl *on*

srv dhcp frcdnsmanl *off*

Syntax Description

Parameter	Description
?	It means to display the current status.
<i>on</i>	It means to use manual setting for DNS setting.
<i>Off</i>	It means to use auto settings acquired from ISP.

Example

```
> srv dhcp frcdnsmanl on
% Domain name server now is using manual settings!
> srv dhcp frcdnsmanl off
% Domain name server now is using auto settings!
```

Telnet Command: **srv dhcp gateway**

This command allows users to specify gateway address for DHCP server.

Syntax

srv dhcp gateway <Gateway IP>

Syntax Description

Parameter	Description
?	It means to display current gateway that you can use.
<i>Gateway IP</i>	It means to specify a gateway address used for DHCP server.

Example

```
> srv dhcp gateway 192.168.2.1  
This setting will take effect after rebooting.  
Please use "sys reboot" command to reboot the router.
```

Telnet Command: **srv dhcp ipcnt**

This command allows users to specify IP counts for DHCP server.

Syntax

srv dhcp ipcnt <IP counts>

Syntax Description

Parameter	Description
<i>IP counts</i>	It means the number that you have to specify for the DHCP server.

Example

```
> srv dhcp ipcnt ?  
% srv dhcp ipcnt <IP counts>  
% Now: 150
```

Telnet Command: **srv dhcp off**

This function allows users to turn off DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: **srv dhcp on**

This function allows users to turn on DHCP server. It needs rebooting router, please type "sys reboot" command to reboot router.

Telnet Command: **srv dhcp relay**

This command allows users to set DHCP relay setting.

Syntax

srv dhcp relay servip <server ip>

srv dhcp relay subnet <index>

Syntax Description

Parameter	Description
<i>server ip</i>	It means the IP address that you want to used as DHCP server.
<i>Index</i>	It means subnet 1 or 2. Please type 1 or 2. The router will invoke this function according to the subnet 1 or 2 specified here.

Example

```
> srv dhcp relay servip 192.168.1.46  
> srv dhcp relay subnet 2
```

```
> srv dhcp relay servip ?
% srv dhcp relay servip <server ip>
% Now: 192.168.1.46
```

Telnet Command: srv dhcp startip

Syntax

srv dhcp startip <IP address>

Syntax Description

Parameter	Description
<i>IP address</i>	It means the IP address that you can specify for the DHCP server as the starting point.

Example

```
> srv dhcp startip 192.168.1.53
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
```

Telnet Command: srv dhcp status

This command can display general information for the DHCP server, such as IP address, MAC address, leased time, host ID and so on.

Syntax

srv dhcp startip <LAN1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20/ip_routed_subnet>

Syntax Description

Parameter	Description
<LAN1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20/ip_routed_subnet>	It means to display current status for the selected interface.

Example

```
> srv dhcp status lan1
LAN1      : DHCP Server On   IP Pool: 192.168.1.10 ~ 192.168.1.209
            Default Gateway: 192.168.1.1
-----
Index  IP Address      MAC Address          Leased Time      HOST ID
-----
> srv dhcp status
LAN1      : DHCP Server On   IP Pool: 192.168.1.10 ~ 192.168.1.209
            Default Gateway: 192.168.1.1
IP Routed : DHCP Server Off
-----
Index  IP Address      MAC Address          Leased Time      HOST ID
-----
LAN1
```

Telnet Command: `srv dhcp leasetime`

This command can set the lease time for the DHCP server.

Syntax

`srv dhcp leasetime <Lease Time (sec)>`

Syntax Description

Parameter	Description
<i>Lease Time (sec)</i>	It means the lease time that DHCP server can use. The unit is second.

Example

```
> srv dhcp leasetime ?
% srv dhcp leasetime <Lease Time (sec.)>
% Now: 86400
>
```

Telnet Command: `srv dhcp nodetype`

This command can set the node type for the DHCP server.

Syntax

`srv dhcp nodetype <count>`

Syntax Description

Parameter	Description
<i>count</i>	It means to specify a type for node. 1. B-node 2. P-node 4. M-node 8. H-node

Example

```
> srv dhcp nodetype 1
> srv dhcp nodetype ?
%% srv dhcp nodetype <count>
%% 1. B-node 2. P-node 4. M-node 8. H-node
% Now: 1
```

Telnet Command: `srv dhcp primWINS`

This command can set the primary IP address for the DHCP server.

Syntax

`srv dhcp primWINS <WINS IP address>`

`srv dhcp primWINS clear`

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of primary WINS server.
<i>clear</i>	It means to remove the IP address settings of primary WINS server.

Example

```
> srv dhcp primWINS 192.168.1.88
> srv dhcp primWINS ?
%% srv dhcp primWINS <WINS IP address>
%% srv dhcp primWINS clear
% Now: 192.168.1.88
```

Telnet Command: `srv dhcp secWINS`

This command can set the secondary IP address for the DHCP server.

Syntax

`srv dhcp secWINS <WINS IP address>`

`srv dhcp secWINS clear`

Syntax Description

Parameter	Description
<i>WINS IP address</i>	It means the IP address of secondary WINS server.
<i>clear</i>	It means to remove the IP address settings of second WINS server.

Example

```
> srv dhcp secWINS 192.168.1.180
> srv dhcp secWINS ?
%% srv dhcp secWINS <WINS IP address>
%% srv dhcp secWINS clear
% Now: 192.168.1.180
```

Telnet Command: **srv dhcp expRecycleIP**

This command can set the time to check if the IP address can be assigned again by DHCP server or not.

Syntax

srv dhcp expRecycleIP <sec time>

Syntax Description

Parameter	Description
<i>sec time</i>	It means to set the time (5~300 seconds) for checking if the IP can be assigned again or not.

Example

```
> srv dhcp expRecycleIP 250
% DHCP expired_RecycleIP = 250
```

Telnet Command: **srv dhcp tftp**

This command can set the TFTP server as the DHCP server.

Syntax

srv dhcp tftp <TFTP server name>

Syntax Description

Parameter	Description
<i>TFTP server name</i>	It means to Enter the name of TFTP server.

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
```

Telnet Command: **srv dhcp tftpdcl**

This command can remove the name defined for the TFTP server.

Syntax

srv dhcp tftpdcl

Example

```
> srv dhcp tftp TF123
> srv dhcp tftp ?
%% srv dhcp tftp <TFTP server name>
% Now: TF123
> srv dhcp tftpdcl
% The TFTP Server Name had been deleted !!!
```

Telnet Command: `srv dhcp option`

This command can set the custom option for the DHCP server.

Syntax

`srv dhcp option -h`

`srv dhcp option -l`

`srv dhcp option -d <idx>`

`srv dhcp option -e <1 or 0> -i <lan number> -s <Next Server IP Address>`

`srv dhcp option -e <1 or 0> -i <lan number> -c <option number> -v <option value>`

`srv dhcp option -e <1 or 0> -i <lan number> -c <option number> -x <option value>`

`srv dhcp option -e <1 or 0> -i <lan number> -c <option number> -a <option value>`

`srv dhcp option -u <idx number>`

Syntax Description

Parameter	Description
<code>-h</code>	It means to display usage of this command.
<code>-l</code>	It means to display all the user defined DHCP options.
<code>-d <idx></code>	It means to delete the option number by specifying its index number.
<code>-e <1 or 0></code>	It means to enable/disable custom option feature. 1:enable 0:disable
<code>-i <lan number></code>	<lan number> : It means to specify the LAN interface. 1: lan1 a: all LAN r: routed subnet
<code>-s <Next Server IP Address></code>	It means to set the next server IP address. Next Server IP Address: Enter an IP address.
<code>-c <option number></code>	It means to set option number. Available number ranges from 0 to 255. option number: Enter a number.
<code>-v <option value></code>	It means to set option number by typing string. option value: Enter a string.
<code>-x <option value></code>	It means to set option number with the format of Hexadecimal characters. option value: Enter a number (hex).
<code>-a <option value></code>	It means to set the option value by specifying the IP address. option value: Enter an IP address.
<code>-u <idx number></code>	It means to update the option value of the sepecified index. idx number: Enter the index number of the option value.

Example

```
> srv dhcp option -e 1 -i 1/2 -s 8.8.8.8
> srv dhcp option -l
% state  idx interface      opt type  data
% enable 1   ALL LAN          18 ASCII  /path
```

Telnet Command: `srv nat dmz`

This command allows users to set DMZ host. Before using this command, please set WAN IP Alias first.

Syntax

`srv nat dmz n m [-<command> <parameter> | ... ]`

Syntax Description

Parameter	Description
<code>[<command> <parameter>...]</code>	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<code>n</code>	It means to map selected WAN IP to certain host. 1: wan1 2: wan2
<code>m</code>	It means the index number of the DMZ host. Default setting is "1" (WAN 1). It is only available for Static IP mode. If you use other mode, you can set 1 ~ 8 in this field. If WAN IP alias has been configured, then the number of DMZ host can be added more.
<code>-e</code>	It means to enable/disable such feature. 1:enable 0:disable
<code>-i</code>	It means to specify the private IP address of the DMZ host.
<code>-r</code>	It means to remove DMZ host setting.
<code>-v</code>	It means to display current status.

Example

```
> srv nat dmz 1 1 -i 192.168.1.96
> srv nat dmz -v
%      WAN1 DMZ mapping status:
Index  Status  WAN1 aux IP    Private IP
-----
1      Disable  0.0.0.0 192.168.1.96
```

Telnet Command: `srv nat ipsecpass`

This command allows users to enable or disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

Syntax

`srv nat ipsecpass <options>`

Syntax Description

Parameter	Description
<code><options></code>	The available commands with parameters are listed below.
<code>on</code>	It means to enable IPSec ESP tunnel passthrough and IKE source port (500) preservation.

<i>off</i>	It means to disable IPSec ESP tunnel passthrough and IKE source port (500) preservation.
<i>status</i>	It means to display current status for checking.

Example

```
> srv nat ipsecpass status
%% Status: IPsec ESP pass-thru and IKE src_port:500 preservation is OFF.
```

Telnet Command: srv nat openport

This command allows users to set open port settings for NAT server.

Syntax

srv nat openport n m [*-<command> <parameter> | ...*]

Syntax Description

Parameter	Description
[<i><command></i> <i><parameter> ...</i>]	The available commands with parameters are listed below. [...] means that you can Enter several commands in one line.
<i>n</i>	It means the index number for the profiles. The range is from 1 to 100.
<i>m</i>	It means to specify the sub-item number for this profile. The range is from 1 to 10.
<i>-a <enable></i>	It means to enable or disable the open port rule profile. 0: disable 1:enable
<i>-c <comment></i>	It means to Enter the description (less than 23 characters) for the defined network service.
<i>-l <source ip idx></i>	It means to set source IP object. 1 to 192: for IP object 1 to 32: for IP group 0: Any For example: srv nat openport 1 1 -l 1 -g 0
<i>-g <source ip type></i>	It means to set IP type. 0: IP object 1: IP group For example: srv nat openport 1 1 -l 1 -g 0
<i>-i <local ip></i>	It means to set the IP address for local computer. Local ip: Type an IP address in this field.
<i>-w <widx><ipidx></i>	widx: Specify the public IP. 1: WAN1 Default, 2: WAN2, ...and so on. ipidx: Specify the index number of an alias IP (1 to 32).
<i>-p <protocol></i>	Specify the transport layer protocol. Available values are TCP, UDP and ALL.
<i>-s <start port></i>	It means to specify the starting port number of the service offered by the local host. The range is from 0 to 65535.

<code>-e <end port></code>	It means to specify the ending port number of the service offered by the local host. The range is from 0 to 65535.
<code>-v</code>	It means to display current settings.
<code>-r <idx></code>	It means to delete the specified open port setting. idx: Enter the index number of the profile.
<code>-f <idx></code>	It means to return to factory settings for all the open ports profiles.

Example

```
> srv nat openport 1 1 -a 1 -c games -i 192.168.1.55 -w 1 1 -p TCP -s
56 -e 83
Set WAN Port ok!!
> srv nat openport 1 1 -v
%% Status: Enable
%% Comment: games
%% WAN Interface: WAN1
%% Private IP address: 192.168.1.55
Index  Protocal      Start Port    End Port
*****
  1.    TCP          56           83
>
>
```

Telnet Command: **srv nat portmap**

This command allows users to set port redirection table for NAT server.

Syntax

srv nat portmap add <idx> <serv name> <proto> <pub port> <src ip type> <src ip idx> <pri ip> <pri port> <wan idx> <alias IP>

srv nat portmap del <idx>

srv nat portmap disable <idx>

srv nat portmap enable <idx> <proto>

srv nat portmap flush

srv nat portmap table

srv nat portmap view

Syntax Description

Parameter	Description
<i>Add <idx></i>	It means to add a new port redirection table with an index number. Available index number is from 1 to 10.
<i>serv name</i>	It means to type one name as service name.
<i>proto</i>	It means to specify TCP or UDP as the protocol.
<i>pub port</i>	It means to specify which port can be redirected to the specified Private IP and Port of the internal host.
<i>src ip type</i>	It means to specify the IP type (object or group). ip type: 0 means IP object; 1 means IP group.
<i>src ip idx</i>	It means to specify the index number of the object profile. ip idx: 1 to 192 for IP object profile; 1 to 32 for IP group profile. 0 means any object or group.
<i>pri ip</i>	It means to specify the private IP address of the internal host providing the service.
<i>pri port</i>	It means to specify the private port number of the service offered by the internal host.
<i>wan idx</i>	It means to specify WAN interface for the port redirection. Idx: wan1 to wan4, all
<i>alias ip</i>	It means to specify an alias IP by entering the index number (1 to 32). ip: 1 to 32.
<i>del <idx></i>	It means to remove the selected port redirection setting.
<i>disable <idx></i>	It means to inactivate the selected port redirection setting.
<i>enable <idx></i>	It means to activate the selected port redirection setting.
<i>flush</i>	It means to clear all the port mapping settings.
<i>table</i>	It means to display Port Redirection Configuration Table.

Example

```
> srv nat portmap add 1 name tcp 100 0 0 192.168.1.10 200 wan1 1
> srv nat portmap table
NAT Port Redirection Configuration Table:
Index  Service Name  Protocol  Public Port  Private IP      Private Port ifno
```

1	name	6	80	192.168.1.10	200	-1
2		0	0		0	-2
3		0	0		0	-2
4		0	0		0	-2
5		0	0		0	-2
6		0	0		0	-2
7		0	0		0	-2
8		0	0		0	-2
9		0	0		0	-2
20		0	0		0	-2
...						
...						

Protocol: 0 = Disable, 6 = TCP, 17 = UDP

Telnet Command: **srv nat status**

This command allows users to view NAT Port Redirection Running Table.

Example

```
> srv nat status
NAT Port Redirection Running Table:
Index  Protocol  Public Port  Private IP      Private Port
1      6          100         192.168.1.10    200
2      0          0           0.0.0.0         0
3      0          0           0.0.0.0         0
4      0          0           0.0.0.0         0
5      0          0           0.0.0.0         0
6      0          0           0.0.0.0         0
7      0          0           0.0.0.0         0
8      0          0           0.0.0.0         0
9      0          0           0.0.0.0         0
...
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
```

Telnet Command: **srv nat showall**

This command allows users to view a summary of NAT port redirection setting, open port and DMZ settings.

Example

```
> srv nat showall ?
Index  Proto  WAN IP:Port      Private IP:Port  Act
*****
R01    TCP    0.0.0.0:80       192.168.1.11:100 Y
O01    TCP    0.0.0.0:23~83    192.168.1.100:23~83 Y
D01    All    0.0.0.0          192.168.1.96    Y
R:Port Redirection, O:Open Ports, D:DMZ
>
```

Telnet Command: `srv nat pseudctl`

This command allows users to check the pseudo port number to prevent from port conflict.

Syntax

`srv nat pseudctl session <value>`

`srv nat pseudctl function <0-3>`

Syntax Description

Parameter	Description
<code>session <value></code>	Set the threshold of the session. <value>: 0 to 2147483647.
<code>function <0-3></code>	0: It means "Auto". Check the created pseudo port number automatically when the session number is over the threshold. 1: It means "Not". Create a pseudo port number based on subnet setting. No verification. 2: It means "Must". Check the created pseudo port number if it is used by other client. 3: Create a pseudo port number. No verification.

Example

```
> srv nat pseudctl function 2
pseudo port: get hash pseudo port + subnet.
pseudo port search: check pseudo port(Must).
>
```

Telnet Command: `srv nat RSTTimeout`

This command is used for forwarding RST out via TCP after a period of time.

Syntax

`srv nat RSTTimeout <value>`

Syntax Description

Parameter	Description
<code><value></code>	Set the timeout value. <value>: 0 to 10 (one unit is 10msec).

Example

```
> srv nat RSTTimeout 2
Set timeout 2 unit
> srv nat RSTTimeout ?
%% srv RSTtimeout <value> (unit is 10msec). (0<=value<=10)
-----
now timeout set 2 unit
```

Telnet Command: switch -i

This command is used to obtain the TX (transmitted) or RX (received) data for each connected switch.

Syntax

switch -i <switch idx_no> <option>

Syntax Description

Parameter	Description
<i>switch idx_no</i>	It means the index number of the switch profile.
<i>option</i>	The available commands with parameters are listed below. <i>cmd</i> <i>acc</i> <i>traffic</i> <on/off/status/tx/rx>
<i>cmd</i>	It means to send command to the client.
<i>acc</i>	It means to set the client authentication account and password.
<i>traffic</i> <on/off/status/tx/rx>	It means to turn on/off or display the data transmission from the client.

Example

```
> switch -i 1 traffic on
External Device NO. 1 traffic statistic function is enable
```

Telnet Command: switch status

This command is used to display current switch status.

Example

```
> switch status ?
External Device auto discovery status : Enable
No Respond to External Device : Enable
Display External Device syslog : Enable
>
```

Telnet Command: switch not_respond

This command is used to detect the external device automatically and display on this page.

Syntax

switch not_respond 0

switch not_respond 1

Syntax Description

Parameter	Description
0	Disable the option of "No Respond to External Device packets".
1	Enable the option of "No Respond to External Device packets".

Example

```
> switch not_respond 1
slave not respond!
>
```

Telnet Command: switch on

This command is used to turn on the auto discovery for external devices.

Example

```
> switch on
Enable Extrnal Device auto discovery!
```

Telnet Command: switch off

This command is used to turn off the auto discovery for external devices.

Example

```
> switch off
Disable External Device auto discovery!
```

Telnet Command: switch list

This command is used to display the connection status of the switch.

Example

```
> switch list
No.      Mac          IP          status  Dur Time  CWMP  ACS_CTL  Mod
el_Name  firmware_version
-----
[1] 00-1d-aa-0c-cd-08 192.168.1.10 On-Line  00:05:38  -1    -1
G2280
```

Telnet Command: switch clear

This command is used to reset the switch table and reboot the router.

Syntax

switch clear <idx>

Syntax Description

Parameter	Description
<i>idx</i>	It means the index number of each item shown on the table. The range is from 1 to 8.
<i>-f</i>	It means to clear all of the data.

Example

```
> switch clear 1
Switch Data clear successful

> switch clear -f
Switch Data clear successful
```

Telnet Command: switch query

This command is used to enable or disable the switch query.

Example

```
> switch query on
Extern Device status query is Enable

> switch query off
Extern Device status query is Disable
```

Telnet Command: switch syslog

This command is used to save the switch log onto Syslog.

Example

```
> switch syslog on
External Device syslog is Enable
```

Telnet Command: sys admin

This command is used for RD engineer to access into test mode of Vigor router.

Telnet Command: sys adminuser

This command is used to create user account and specify LDAP server. The server will authenticate the local user who wants to access into the web user interface of Vigor router.

Syntax

sys adminuser <option>

Syntax Description

Parameter	Description
<i>option</i>	Available options includes: Local <0-1> LDAP <0-1>

	edit <INDEX> delete <INDEX> view <INDEX>
<i>Local</i> <0-1>	0 - Disable the local user. 1 - Enable the local user.
<i>LDAP</i> <0-1>	0 - Disable the LDAP. 1 - Enable the LDAP.
<i>edit</i> <INDEX> <i>username</i> <i>password</i>	Edit an existed user account or create a new local user account. <INDEX>: 1 ~8. There are eight profiles to be added / edited. Username: Enter a new name for local user. Password: Enter a password for local user.
<i>delete</i> <INDEX>	Delete a local user account.
<i>view</i> <INDEX>	Show the user account/password detail information.

Example

```

> sys adminuser Local 1
Local User has enabled!
> sys adminuser LDAP 1
LDAP has enabled!
> sys adminuser edit 1 carrie test123
Updated!
> sys adminuser view 1

Index:1
User Name:carrie
User Password:test123

```

Telnet Command: sys board

This command is used to turn on or turn off the function of physical factory reset button, WLAN button, LEDs, and / or the USB ports on Vigor router.

Syntax

sys board button def <on/off>

sys board led control <on/off>

sys board led sleepMode <on/off>

sys board led sleepMode time <minute>

sys board usb p1/p2 <on/off>

Syntax Description

Parameter	Description
<i>button def</i> <on/off>	on - It is the default value (Enabled). off - Disable the reset function of the factory reset button.

<i>led control <on/off></i>	on – It is the default value (Enabled). The LEDs on the front panel is always on. off – The LEDs on the front panel is always off.
<i>led sleepMode <on/off></i>	The function of SleepMode will be available only when LED control is set to “On”. on – Enable the function of sleep mode. off – Disable the function of sleep mode.
<i>led sleepMode time <minute></i>	Set the countdown time for the LEDs to sleep. [minute] – Enter a value (e.g., 1, 2, 3 and etc.)
<i>usb p1/p2 <on/off></i>	on – It is the default value (Enabled). off – Disable the USB port 1 or 2.

Example

```
> sys board button def off
default button is off now.
> sys board button def on
default button is on now.
> sys board usb p2 off
USB port2 power is off now.
> sys board led sleepMode ?
Usage:
sys board led sleepMode [on/off]
                        [time] [minute]
Current Setting:
LEDs Sleep Mode is off now.
Sleep Countdown Time : 1 minute(s)
> sys board led sleepMode on
LEDs Sleep Mode is on now.
> sys board led sleepMode time 3
Sleep Countdown Time set as 3 minute(s).
```

Telnet Command: sys bonjour

This command is used to disable/enable and configure the Bonjour service.

Syntax

sys bonjour [*-<command>* *<parameter>* | ...]

Syntax Description

Parameter	Description
<i>-e <enable></i>	It is used to disable/enable bonjour service (0: disable, 1: enable).
<i>-h <enable></i>	It is used to disable/enable http (web) service (0: disable, 1: enable).
<i>-t <enable></i>	It is used to disable/enable telnet service (0: disable, 1: enable).
<i>-f <enable></i>	It is used to disable/enable FTP service (0: disable, 1: enable).
<i>-s <enable></i>	It is used to disable/enable SSH service (0: disable, 1: enable).
<i>-p <enable></i>	It is used to disable/enable printer service (0: disable, 1: enable).
<i>-6 <enable></i>	It is used to disable/enable IPv6 (0: disable, 1: enable).

Example

```
> sys bonjour -s 1
>
```

Telnet Command: sys cfg

This command reset the router with factory default settings. When a user types this command, all the configuration will be reset to default setting.

Syntax

sys cfg default

sys cfg status

Syntax Description

Parameter	Description
<i>default</i>	It means to reset current settings with default values.
<i>status</i>	It means to display current profile version and status.

Example

```
> sys cfg status
Profile version: 4.0.2    Status: 1 (0xe186c11a)
> sys cfg default
>
```

Telnet Command: sys cmdlog

This command displays the history of the commands that you have typed.

Example

```
> sys cmdlog
% Commands Log: (The lowest index is the newest !!!)
  [1] sys cmdlog
  [2] sys cmdlog ?
  [3] sys ?
  [4] sys cfg status
  [5] sys cfg ?
```

Telnet Command: sys domainname

This command can set and remove the domain name of the system when DHCP mode is selected for WAN.

Syntax

sys domainname <wan1/wan2> <Domain Name Suffix>

sys domainname <wan1/wan2> clear

Syntax Description

Parameter	Description
wan1/wan2	It means to specify WAN interface for assigning a name for it.
Domain Name Suffix	It means the name for the domain of the system. The maximum number of characters that you can set is 40.
clear	It means to remove the domain name of the system.

Example

```
> sys domainname wan1 clever
> sys domainname wan2 intellegent
> sys domainname ?
% sys domainname <wan1/wan2> <Domain Name Suffix (max. 40 characters)>
% sys domainname <wan1/wan2> clear
% Now: wan1 == clever, wan2 ==intelligent
>
```

Telnet Command: sys iface

This command displays the current interface connection status (UP or Down) with IP address, MAC address and Netmask for the router.

Example

```
> sys iface
Interface 0 Ethernet:
Status: UP
IP Address: 192.168.1.1      Netmask: 0xFFFFFF00 (Private)
IP Address: 0.0.0.0        Netmask: 0xFFFFFFFF
MAC: 00-50-7F-00-00-00
Interface 4 Ethernet:
Status: DOWN
```

```

IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-02
Interface 5 Ethernet:
Status: DOWN
IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-03
Interface 6 Ethernet:
Status: DOWN
IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-04
Interface 7 Ethernet:
Status: DOWN
IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-05
Interface 8 Ethernet:
Status: DOWN
IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-06

Interface 9 Ethernet:
Status: DOWN
IP Address: 0.0.0.0          Netmask: 0x00000000
MAC: 00-50-7F-00-00-07
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
>

```

Telnet Command: sys name

This command can set and remove the name for the router when DHCP mode is selected for WAN.

Syntax

sys name <wan1/wan2> <ASCII string>

sys name <wan1/wan2> **clear**

Syntax Description

Parameter	Description
<i>wan1/wan2</i>	It means to specify WAN interface for assigning a name for it.
<i>ASCII string</i>	It means the name for router. The maximum character that you can set is 39.

Example

```

> sys name wan1 drayrouter
> sys name ?
% sys name <wan1/wan2> <ASCII string (max. 39 characters)>
% sys name <wan1/wan2> clear
% Now: wan1 == drayrouter, wan2 ==

```

Note: Such name can be used to recognize router's identification in SysLog dialog.

Telnet Command: **sys passwd**

This command allows users to set password for the administrator.

sys passwd <old password> <new password>

Syntax Description

Parameter	Description
<old password> <new password>	It means the password for administrator. The maximum character that you can set is 83.

Example

```
> sys passwd admin ce0416
Password change successful !!!
>
```

Telnet Command: **sys reboot**

This command allows users to restart the router immediately.

Example

```
> sys reboot
>
```

Telnet Command: **sys autoreboot**

This command allows users to restart the router automatically within a certain time.

Syntax

sys autoreboot <on/off/hour(s)>

Syntax Description

Parameter	Description
<i>on/off</i>	On – It means to enable the function of auto-reboot. Off – It means to disable the function of auto-reboot.
<i>hours</i>	It means to set the time schedule for router reboot. For example, if you type “2” in this field, the router will reboot with an interval of two hours.

Example

```
> sys autoreboot on
autoreboot is ON
> sys autoreboot 2
autoreboot is ON
autoreboot time is 2 hour(s)
```

Telnet Command: **sys commit**

This command allows users to save current settings to FLASH. Usually, current settings will be saved in SRAM. Yet, this command will save the file to FLASH.

Example

```
> sys commit
>
```

Telnet Command: **sys tftpd**

This command can turn on TFTP server for upgrading the firmware.

Example

```
> sys tftpd
% TFTP server enabled !!!
```

Telnet Command: **sys cc**

This command can display current country code and wireless region of this device.

Example

```
> sys cc
Country Code      : 0x 0 [International]
Wireless Region Code: 0x30
>
```

Telnet Command: **sys version**

This command can display current version for the system.

Example

```
> sys version
Router Model: Vigor2962   Version: 3.9.3 English
Profile version: 4.0.2    Status: 1 (0xe186c11a)
Router IP: 192.168.1.1    Netmask: 255.255.255.0
Firmware Build Date/Time: Oct 12 2020 18:13:46
Router Name: DrayTek
Revision: 551_93812 V2962_393
>
```

Telnet Command: sys qrybuf

This command can display the system memory status and leakage list.

Example

```
> sys qrybuf
Buf KMC4088 (4088B), used#: 1, cached#: 7
Buf KMC2552 (2552B), used#: 7, cached#: 95
Buf KMC1016 (1016B), used#: 3, cached#: 5
Buf KMC504 ( 504B), used#: 5, cached#: 19
Buf KMC248 ( 248B), used#: 119, cached#: 57
Buf KMC120 ( 120B), used#: 229, cached#: 91
Buf KMC56 ( 56B), used#: 40, cached#: 88
Buf KMC24 ( 24B), used#: 241, cached#: 143
Dynamic memory(SLAB): 134217728B; 97696B used; 324192B/0B in level 1/2 cache.
Total memory usage: 65% (217154008/332775688 Bytes)

Number of un-free ARP entry : 0

FLOWTRACK Memory Status
# of free = 150000
# of maximum = 0
# of flowstate = 150000
# of lost by signature = 0
# of lost by list = 0
```

Telnet Command: sys pollbuf

This command can turn on or turn off polling buffer for the router.

Syntax

sys pollbuf on

sys pollbuf off

Syntax Description

Parameter	Description
<i>on</i>	It means to turn on pulling buffer.
<i>off</i>	It means to turn off pulling buffer.

Example

```
> sys pollbuf on
% Buffer polling is on!

> sys pollbuf off
% Buffer polling is off!
```

Telnet Command: sys tr069

This command can set CPE settings for applying in VigorACS.

Syntax

sys tr069 get <parm> <option>

sys tr069 set <parm> <value>

sys tr069 getnoti <parm>

sys tr069 setnoti <parm> <value>

sys tr069 log

sys tr069 debug <on/off>

sys tr069 save

sys tr069 clear

sys tr069 inform <event code>

sys tr069 port <port num>

sys tr069 cert_auth <on/off>

sys tr069 notify <option>

Syntax Description

Parameter	Description
<i>get</i> <parm> <option>	It means to get parameters for tr-069. option=<nextlevel>: only gets nextlevel for GetParameterNames.
<i>set</i> <parm> <value>	It means to set parameters for tr-069.
<i>getnoti</i> <parm>	It means to get parameter notification value.
<i>setnoti</i> <parm> <value>	It means to set parameter notification value.
<i>log</i>	It means to display the TR-069 log.
<i>debug</i> <on/off>	on: turn on the function of sending debug message to syslog. off: turn off the function of sending debug message to syslog.
<i>save</i>	It means to save the parameters to the flash memory of the router.
<i>clear</i>	It means to clear TR069 parameters in the flash memory of the router.
<i>Inform</i> <event code>	It means to inform parameters for tr069 with different event codes. [event code] includes: 0-"0 BOOTSTRAP", 1-"1 BOOT", 2-"2 PERIODIC", 3-"3 SCHEDULED", 4-"4 VALUE CHANGE", 5-"5 KICKED", 6-"6 CONNECTION REQUEST", 7-"7 TRANSFER COMPLETE", 8-"8 DIAGNOSTICS COMPLETE", 9-"M Reboot"
<i>port</i> <port num>	It means to change tr069 listen port number.
<i>cert_auth</i> <on/off>	on: turn on certificate-based authentication. off: turn off certificate-based authentication.
<i>notify</i> <option>	-S : Displays the CPE notify settings.

	-n on/off : Sets CPE notify log on/off. -l on/off : Sets web login log on/off. -c on/off : Sets web changed log on/off. -h on/off : Sets high availability log on/off. -b on/off : Sets bandwidth utilization log on/off. -B "<WAN number> <Medium threshold>% <High threshold>% <TX Speed> Mb <RX Speed>Mb" : bandwidth utilization log setting, ex: sys tr069 notify -B "1 30 60 100 100"

Example

```

> sys tr069 get Int. nextlevel
Total number of parameter is 24
Total content length of parameter is 915
InternetGatewayDevice.LANDeviceNumberOfEntries
InternetGatewayDevice.WANDeviceNumberOfEntries
InternetGatewayDevice.DeviceInfo.
InternetGatewayDevice.ManagementServer.
InternetGatewayDevice.Time.
InternetGatewayDevice.Layer3Forwarding.

InternetGatewayDevice.X_00507F_Diagnostics.
--- MORE --- ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
...
> sys tr069 notify -B "1 30 60 100 100"
lease enable the bandwidth utilization notify log.
> sys tr069 notify -b on
et OK
> sys tr069 notify -B "1 30 60 100 100"
>

```

Telnet Command: sys health

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

Syntax

sys health cpu_usage

sys health mem_usage

sys health arp_status

sys health dos_status

sys health sess_usage

sys health view

sys health vpn_status

sys health voip_status

Syntax Description

Parameter	Description
<i><command><parameter></i>	The available commands with parameters are listed below.
<i>cpu_usage</i> <i><command><parameter></i>	-E <1/0> : Enable/disable this health parameter settings-CPU usage. -w <threshold> : Sets the warning threshold, 0-100 percent. -e <threshold> : Sets the emergency threshold, 0-100 percent. -r <interval> : Sets the warning report interval, 1-1440 min. -m <interval> : Sets the emergency report interval, 1-1440 min.
<i>mem_usage</i> <i><command><parameter></i>	- E <1/0> : Enable/disable this health parameter settings-memory usage. -w <threshold> : Sets the warning threshold, 0-100 percent. -e <threshold> : Sets the emergency threshold, 0-100 percent. -r <interval> : Sets the warning report interval, 1-1440 min. -m <interval> : Sets the emergency report interval, 1-1440 min.
<i>arp_status</i> <i><command><parameter></i>	-E <1/0> : Enable/disable this health parameter settings-ARP status. -w <threshold> : Warning threshold, 0-100 percent. -e <threshold> : Emergency threshold, 0-100 percent. -r <interval>: Warning report interval, 1-1440 min. -m <interval>: Emergency report interval, 1-1440 min.
<i>dos_status</i> <i><command><parameter></i>	-E <1/0>: Enable / disable this health parameter settings-DoS status. -r <interval>: Warning report interval, 1-1440 min. -m <interval>: Emergency report interval, 1-1440 min.
<i>sess_usage</i> <i><command><parameter></i>	-E <1/0>: Enable/disable this health parameter setting-session usage. -w <threshold> : Warning threshold, 0-100 percent. -e <threshold> : Emergency threshold, 0-100 percent. -r <interval>: Warning report interval, 1-1440 min. -m <interval>: Emergency report interval, 1-1440 min.
<i>View</i>	Displays current settings for health parameters.
<i>vpn_status</i> <i><command><parameter></i>	-E <1/0>: Enable/disable this health parameter setting-VPN status. -w <threshold> : Warning threshold, 0-100 percent. -e <threshold> : Emergency threshold, 0-100 percent. -r <interval>: Warning report interval, 1-1440 min. -m <interval>: Emergency report interval, 1-1440 min
<i>voip_status</i> <i><command><parameter></i>	-E <1/0> : Enable/disable this health parameter setting-VoIP status. -w <threshold> : Warning threshold, 0-100 percent. -e <threshold> : Emergency threshold, 0-100 percent. -r <interval> : Warning report interval, 1-1440 min. -m <interval> : Emergency report interval, 1-1440 min.

Example

```

> sys health vpn_status -m 30
% Set emergency interval to 30 min.
> sys health view
%
%                                     Warning  Emergency
% -----
% [ ] CPU Status                    Threshold: 90      95
%                                     Report Interval: 5      2
% -----
% [ ] Memory Status                 Threshold: 88      95
%                                     Report Interval: 5      2
% -----
% [ ] ARP Status                    Threshold: 60      80
%                                     Report Interval: 15     5
% -----
% [ ] Session Usage                 Threshold: 60      80
%                                     Report Interval: 15     5
% -----
% [ ] DDoS Status                   Report Interval: 5      1
% -----
% [ ] VPN Status                    Report Interval: 0      30
% -----
% [ ] VoIP R-Factor                 Threshold: 60      40
%                                     Report Interval: 1      1
%

```

Telnet Command: sys alg

This command can enable /disable the ALG (Application Layer Gateway) function.

Syntax

sys alg -e <0/1>

Example

```

> sys alg -e 1
Enable ALG
>

```

Telnet Command: sys sip_alg

This command can turn on/off SIP ALG (Application Layer Gateway) for traversal.

Syntax

sys sip_alg <command> <parameter>

Syntax Description

Parameter	Description
<command> <parameter>	-e <1/0>: Enable or disable (0:disable, 1:enable) the function of SIP ALG. -p <1 to 65535>: set your listening port for SIP ALG. -u <1/0>: Enable or disable (0:disable, 1:enable) the listen along UDP path. -t <1/0>: Enable or disable (0:disable, 1:enable) the listen along TCP path .

Example

```
> DrayTek> sys sip_alg -e 1
    Enable SIP ALG
>
```

Telnet Command: rtsp rtsp_alg

This command can turn on/off RTSP (Real Time Streaming Protocol) ALG (Application Layer Gateway) for traversal.

Syntax

sys rtsp_alg <command> <parameter>

Syntax Description

Parameter	Description
<command> <parameter>	-e <1/0>: Enable or disable (0:disable, 1:enable) the function of RTSP ALG. -p <1 to 65535>: set your listening port for RTSP ALG. -u <1/0>: Enable or disable (0:disable, 1:enable) the listen along UDP path. -t <1/0>: Enable or disable (0:disable, 1:enable) the listen along TCP path . -v: show RTP and RTCP portmap information of RTSP ALG.

Example

```
> sys rtsp_alg -p 333
    Current listening RTSP Port: 333
> sys rtsp_alg -v
    Current Open PortMap Number of RTSP ALG: 0
```

Telnet Command: sys license

This command can process the system license.

Syntax

sys license *reset_regser*

sys license *licera*

sys license *licifno*

sys license *licalias*

sys license *lic_trigger*

sys license *liclog*

Syntax Description

Parameter	Description
<i>reset_regser</i>	It means the license register server setting.
<i>licera</i>	It means to erase license setting.
<i>licifno</i>	It means to license and signature download (authenticatet with MyVigor) interface setting.
<i>licalias</i>	It means to license and signature download WAN Alias IP setting(also affect WCF).
<i>lic_trigger</i>	It means to automatically trigger the license to update on boot time.
<i>liclog</i>	Displays authentication log.

Example

```
> sys license licifno

License and Signature download interface setting:
licifno [AUTO/WAN#]

Ex: licifno wan1

Download interface is "auto-selected" now.
```

Telnet Command: sys daylightsave

This command is used to configure daylight save setting.

Syntax

sys daylightsave [-<command> <parameter> | ...]

Parameter	Description
<command><parameter> ...	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-v	Display the daylight saving settings.
-r	Set to factory default setting.
-e <1/0>	Enable (1) / disable (0) daylight saving.
-t <0/1/2>	Specify the saving type for daylight setting. 0 : Default

	1 : Time range 2 : Yearly
-s <year> <month> <day> <hour>	Set the detailed settings of the starting day for time range type. year: must be the year after 2013. month :1 ~ 12 day: 1 ~ 31 hour :0 ~ 23 e.g. , sys daylightsave -s 2014 3 10 12
-d <year> <month> <day> <hour>	Set the detailed settings of the ending day for time range type. year :After 2013. Month:1 ~ 12 day :1 ~ 31 hour : 0 ~ 23 e.g. , sys daylightsave -d 2014 9 10 12
-y <month> <th weekday> <day in week> <hour>	Set the detailed settings of the starting day for yearly type. Month:1 ~ 12 the weekday: 1 ~ 5, 9: last week day in week : 0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour : 0 ~ 23 e.g, sys daylightsave -y 9 1 0 14
-z <month> <th weekday> <day in week> <hour>	Set the detailed settings of the ending day for yearly type. Month:1 ~ 12 the weekday : 1 ~ 5, 9: last week day in week :0:Sun, 1:Mon, 2:Tue, 3:Wed, 4:Thu, 5: Fri, 6:Sat hour : 0 ~ 23 e.g, sys daylightsave -z 3 1 6 14

Example

```
> sys daylightsave -y 9 1 0 14
% Start: Yearly on Sep 1th Sun 14:00
>
```

Telnet Command: sys dnsCacheTbl

This command is used to configure TTL settings which will be displayed in DNS Cache table.

Syntax

sys dnsCacheTbl [*<command><parameter>|...*]

Syntax Description

Parameter	Description
<i><command><parameter> ...</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-l	Display DNS IPv4 entry in the DNS cache table.
-s	Display DNS IPv6 entry in the DNS cache table.
-v	Display the TTL limit value in the DNS cache table.
-t <0/n >	Set the TTL limit value in the DNS cache table. 0- No limit N - Greater than or equal to 5.
-c	Clear the DNS cache table.

Example

```
> sys dnsCacheTbl -l
%DNS Cache Table List
> sys dnsCacheTbl -t 65
% Set TTL limit: 65 seconds.
% When TTL larger than 65s , delete the DNS entry in the router's DNS cache
table.
>
```

Telnet Command: sys syslog

This command is used to configure

Syntax

sys syslog -a <enable> [*-<command> <parameter> | ...*]

Syntax Description

Parameter	Description
<i><command><parameter> ...</i>	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-a <1/0>	Enable (1) or disable (0) Syslog Access Setup.
-s <1/0>	Enable (1) or disable (0) Syslog Save to Syslog Server.
-i <IP address>	Define the IP address of the Syslog server.
-d <port number>	Define the port number (1 ~ 65535) as the destination port.
-u <1/0>	Enable (1) or disable (0) Syslog Save to USB Disk.
-m <1/0>	Enable (1) or disable (0) Mail Syslog.
-f <1/0>	Enable (1) or disable (0) Firewall Log.
-v <1/0>	Enable (1) or disable (0) VPN Log.
-e <1/0>	Enable (1) or disable (0) User Access Log.

-c <1/0>	Enable (1) or disable (0) Call Log.
-w <1/0>	Enable (1) or disable (0) WAN Log.
-r <1/0>	Enable (1) or disable (0) Router/DSL Information.
-p	Update server IP address.
-W <1/0>	Write syslog mode(0: overwrite oldest logs, 1: stop logging).
-U <1/0>	Syslog save to USB Disk unit. (0: GB, 1: MB)
-S <capacity>	Syslog folder capacity in USB Disk. (1-16GB or 1-1024MB)

Example

```
> sys syslog -a 1 -s 1 -i 192.168.1.25 -d 514
>
```

Telnet Command: sys mailalert

This command is used to configure settings for syslog mail alert.

Syntax

sys mailalert [-<command> <parameter>]

Syntax Description

Parameter	Description
<command><parameter> ...	The available commands with parameters are listed below. [...] means that you can type in several commands in one line.
-e <0/1>	Enable/disable Mail Alert. 0 - Disable. 1 - Enable.
-w <0/1/2/3...>	Set the physical interface (e.g., Any, WAN1, WAN2, WAN3...)
-x <WAN IP Alias index>	Set the WAN IP alias. In which, index 1 is reserved and must be set with an interface first.
-i <SMTP Server IP>	Set IP Address for SMTP server.
-o <SMTP Server Port>	Set port number for SMTP server..
-a <Mail Address>	Set E-mail address for alert mail reciver.
-r <Mail Address>	Set E-mail Address for mail return.
-s <0/1/2/3>	Enable/disable the function of Use SSL. <0/1/2/3> : Set Connection Security Plaintext/SSL/StartTLS/Force StartTLS.
-h <0/1>	Enable/disable SMTP Authentication. 0 - Disable. 1 - Enable.
-u <Username>	Set a username for SMTP Authentication.
-p <Password>	Set a password for SMTP Authentication.
-l <type> <0/1>	Enable / disable mail alert for different types. Number 0 ~ 6 represent different types. "0 <0/1>" : Enable/Disable Mail Alert of the DoS Attack. "1 <0/1>" : Enable/Disable Mail Alert of the APPE. "2 <0/1>" : nable/Disable Mail Alert of the VPN Log. "6 <0/1>" : Enable/Disable Mail Alert of the Reboot Debug Log. In which, 0 - Disable. 1 - Enable.

-f	Reset Mail Alert setting to factory default.
-v	Show current Mail Alert setting.
-R <0/1>	Set Mail Alert Reboot debug log mode. 0: Limited Mode 1: Unlimited Mode.

Example

```
> sys mailalert -e 1
Set Enable Mail Alert.
> sys mailalert -v
----- Current setting for Mail Alert -----
Mail Alert: Enable
SMTP Server IP Address: 0.0.0.0
SMTP Server Port: 25
Alert Mail Reciver E-maill Address:
Mail Return E-mail Address:
Use SSL: Disable
SMTP Authentication: Disable
Username for SMTP Authentication:
Password for SMTP Authentication:
Mail Alert for DoS Attack: Enable.
Mail Alert for APPE: Enable.
Mail Alert for VPN Log: Enable.
Mail Alert for Reboot Debug Log: Disable, Mode: Limited.
-----
```

Telnet Command: sys time

This command is used to configure system time and date.

Syntax

sys time server <number><domain>

sys time inquire

sys time show

sys time wan <option>

sys time zone <index>

Syntax Description

Parameter	Description
<i>number</i>	Set the server number, 1 or 2.
<i>domain</i>	Enter the domain name of the time server. The maximum length is 39 characters.
<i>sys time wan</i> <option>	0 - Auto 1 - WAN1 2 - WAN2 3 - WAN3 4 - WAN4 5 - WAN5 6 - WAN6 7 - WAN7 If you want to select WAN Alias IP, the value of Send NTP Request

	Through shouldn't be Auto or USB WAN.
<i>index</i>	Different number means different time zone. 1 - GMT-12:00 Eniwetok, Kwajalein 2 - GMT-11:00 Midway Island, Samoa 3 - GMT-10:00 Hawaii 4 - GMT-09:00 Alaska 5 - GMT-08:00 Pacific Time (US & Canada) 6 - GMT-08:00 Tijuana 7 - GMT-07:00 Mountain Time (US & Canada) 8 - GMT-07:00 Arizona 9 - GMT-06:00 Central Time (US & Canada) 10 - GMT-06:00 Saskatchewan 11 - GMT-06:00 Mexico City, Tegucigalpa 12 - GMT-05:00 Eastern Time (US & Canada) 13 - GMT-05:00 Indiana (East) 14 - GMT-05:00 Bogota, Lima, Quito 15 - GMT-04:00 Atlantic Time (Canada) 16 - GMT-04:00 Caracas, La Paz 17 - GMT-04:00 Santiago 18 - GMT-03:30 Newfoundland 19 - GMT-03:00 Brasilia 20 - GMT-03:00 Buenos Aires, Georgetown 21 - GMT-02:00 Mid-Atlantic 22 - GMT-01:00 Azores, Cape Verde Is. 23 - GMT Greenwich Mean Time : Dublin 24 - GMT Edinburgh, Lisbon, London 25 - GMT Casablanca, Monrovia 26 - GMT+01:00 Belgrade, Bratislava 27 - GMT+01:00 Budapest, Ljubljana, Prague 28 - GMT+01:00 Sarajevo, Skopje, Sofija 29 - GMT+01:00 Warsaw, Zagreb 30 - GMT+01:00 Brussels, Copenhagen 31 - GMT+01:00 Madrid, Paris, Vilnius 32 - GMT+01:00 Amsterdam, Berlin, Bern 33 - GMT+01:00 Rome, Stockholm, Vienna 34 - GMT+02:00 Bucharest 35 - GMT+02:00 Cairo 36 - GMT+02:00 Helsinki, Riga, Tallinn 37 - GMT+02:00 Athens, Istanbul, Minsk 38 - GMT+02:00 Jerusalem 39 - GMT+02:00 Harare, Pretoria 40 - GMT+03:00 Volgograd 41 - GMT+03:00 Baghdad, Kuwait, Riyadh 42 - GMT+03:00 Nairobi 43 - GMT+03:00 Moscow, St. Petersburg 44 - GMT+03:30 Tehran 45 - GMT+04:00 Abu Dhabi, Muscat 46 - GMT+04:00 Baku, Tbilisi 47 - GMT+04:30 Kabul 48 - GMT+05:00 Ekaterinburg 49 - GMT+05:00 Islamabad, Karachi, Tashkent 50 - GMT+05:30 Bombay, Calcutta 51 - GMT+05:30 Madras, New Delhi 52 - GMT+06:00 Astana, Almaty, Dhaka 53 - GMT+06:00 Colombo 54 - GMT+07:00 Bangkok, Hanoi, Jakarta 55 - GMT+08:00 Beijing, Chongqing 56 - GMT+08:00 Hong Kong, Urumqi 57 - GMT+08:00 Singapore 58 - GMT+08:00 Taipei

	59 - GMT+08:00 Perth
	60 - GMT+09:00 Seoul
	61 - GMT+09:00 Osaka, Sapporo, Tokyo
	62 - GMT+09:00 Yakutsk
	63 - GMT+09:30 Darwin
	64 - GMT+09:30 Adelaide
	65 - GMT+10:00 Canberra, Melbourne, Sydney
	66 - GMT+10:00 Brisbane
	67 - GMT+10:00 Hobart
	68 - GMT+10:00 Vladivostok
	69 - GMT+10:00 Guam, Port Moresby
	70 - GMT+11:00 Magadan, Solomon Is.
	71 - GMT+11:00 New Caledonia
	72 - GMT+12:00 Fiji, Kamchatka, Marshall Is.
	73 - GMT+12:00 Auckland, Wellington

Example

```
> sys time zone 8
Set Time Zone OK
> sys time show
***** System Time *****
Current System Time: [2000 Jan 01 Sat 06:24:06]
Primary NTP Server: [pool.ntp.org]
Secondary NTP Server: []
Time Zone Index: [8]. GMT-07:00
Send NTP Request Through: Auto
*****
```

Telnet Command: sys eap_tls

This command is used to disable or enable EAP-TLS.

You might have to enable EAP-TLS compatibility to avoid compatibility issues with some operating systems. But, please note that enabling EAP-TLS compatibility will lower down the connection security level.

Syntax

sys eap_tls set <0/1>

Syntax Description

Parameter	Description
0	Disable EAP-TLS compatibility!
1	Enable EAP-TLS compatibility!

Example

```
> sys eap_tls set 1
Enable EAP_TLS compatibility!
```

Telnet Command: sys dashboard

This command is used to display / hide items (such as System Information, Interface...) on dashboard.

Syntax

sys dashboard [-<command> <value> | ...]

sys dashboard show

Syntax Description

Parameter	Description
<command><value> ...	The available commands with parameters are listed below. [...] means that you can type in several parameters in one line. <command> "0 ~ 9" and "a" represent different sections to be displayed on the dashboard. 0 : Front Panel 1 : System Information 2 : IPv4 LAN Information 3 : IPv4 Internet Access 4 : IPv6 Internet Access 5 : Interface 6 : Security 7 : System Resource 8 : LTE Status 9 : Quick Access a : VoIP <value> 1 : Enable 0 : Disable
show	Display current status (enabled /disabled) for each item.

Example

```
> sys dashboard -0 1
Front Panel enabled
> sys dashboard show
Front Panel enabled
System Information enabled
IPv4 LAN Information enabled
IPv4 Internet Access enabled
IPv6 Internet Access enabled
Interface enabled
Security enabled
System Resource enabled
LTE Status disabled
Quick Access enabled
VoIP disabled
```

Telnet Command: sys max_session

This command is used to set the maximum sessions.

Syntax

sys max_session <150K/300K/500K/1000K>

sys dashboard show

Syntax Description

Parameter	Description
<150K/300K/500K/1000K>	At present, there are four values available for selection.

Example

```
> sys max_session 150K  
Please reboot to apply settings of MAX sessions : 150K
```

Telnet Command: testmail

This command is used to display current settings for sending test mail.

Example

```
> testmail  
Send out test mail  
Mail Alert:[Enable]  
Interface :Any  
WAN_Alias index:[0]  
SMTP_Server:[255.255.255.255]  
SMTP_Port:[25]  
Mail to:[]  
Return-Path:[]  
Connection Security:[Plaintext]  
>
```

Telnet Command: upnp off

This command can close UPnP function.

Example

```
>upnp off  
UPNP say bye-bye
```

Telnet Command: upnp on

This command can enable UPnP function.

Example

```
>upnp on  
UPNP start.
```

Telnet Command: upnp nat

This command can display IGD NAT status.

Example

```
> upnp nat ?  
***** IGD NAT Status *****  
  
((0))  
InternalClient >>192.168.1.10<<, RemoteHost >>0.0.0.0<<  
InternalPort >>21<<, ExternalPort >>21<<  
PortMapProtocol >>TCP<<
```

```

The tmpvirtual server index >>0<<
PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
Ftp Example [MICROSOFT]
((1))
InternalClient >>0.0.0.0<<, RemoteHost >>0.0.0.0<<
InternalPort >>0<<, ExternalPort >>0<<
PortMapProtocol >><NULL><<
The tmpvirtual server index >>0<<
PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
PortMapProtocol >><NULL><<
The tmpvirtual server index >>0<<
PortMapLeaseDuration >>0<<, PortMapEnabled >>0<<
0<<

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: upnp service

This command can display the information of the UPnP service. UPnP service must be enabled first.

Example

```

> upnp on
UPNP start.
> upnp service
>>>> SERVICE TABLE1 <<<<<
  serviceType urn:schemas-microsoft-com:service:OSInfo:1
  serviceId   urn:microsoft-com:serviceId:OSInfo1
  SCPDURL     /upnp/OSInfo.xml
  controlURL  /OSInfo1

.

```

Telnet Command: upnp subscribe

This command can show all UPnP services subscribed.

Example

```
> upnp on
UPNP start.
> upnp subscribe
> upnp subscribe
>>>> (1) serviceType urn:schemas-microsoft-com:service:OSInfo:1

>>>> (2) serviceType
urn:schemas-upnp-org:service:WANCommonInterfaceConfig:1

>>>> (3) serviceType urn:schemas-upnp-org:service:WANIPConnection:1
>
```

Telnet Command: upnp tmpvs

This command can display current status of temp Virtual Server of your router.

Example

```
> upnp tmpvs
***** Temp virtual server status *****

((0))
real_addr >>192.168.1.10<<, pseudo_addr >>172.16.3.229<<
real_port >>0<<, pseudo_port >>0<<
hit_portmap_index >>0<<
The protocol >>TCP<<
time >>0<<

((1))
real_addr >>0.0.0.0<<, pseudo_addr >>0.0.0.0<<

```

Telnet Command: upnp wan

This command is used to specify WAN interface to apply UPnP.

Syntax

upnp wan *[n]*

Syntax Description

Parameter	Description
<i>n</i>	It means to specify WAN interface to apply UPnP. n=0, it means to auto-select WAN interface (0 to 7).

	n=1, WAN1
	n=2, WAN2

Example

```
> upnp wan 1
use wan1 now.
```

Telnet Command: usb list

This command is use to display the information about the brand name and model name of the USB modems which are supported by Vigor router.

Example

```
> usb list ?
Brand      Module      Standard
-----
Aiko       Aiko 83D      3.5G        Y
BandRich   Bandlux C170  3.5G        Y
BandRich   Bandlux C270  3.5G        Y
BandRich   Bandlux C321  3.5G        Y
BandRich   Bandlux C330  3.5G        Y

Telnet Command: usb user

This command is used to set profiles for FTP/SMB users.

Syntax Description

usb user add <Index> <Username> <Password> <Permission> <Home path>

usb user rm <Index>

usb user enable <Index>

usb user disable <Index>

usb user list

Syntax Description

Parameter	Description
<i>add</i>	Add a new user profile.
<i>Rm</i>	Delete an existed user profile.
<i>enable</i>	Enable a user profile.
<i>disable</i>	Disable a user profile.
<i>list</i>	Display all of the user profile.
<i>index</i>	It means the index number of the user profile. There are 16 profiles allowed to be configured. So the range of such option is 1 ~ 16.
<i>Username</i>	Type a text (maximum 131 characters) as the username for the user profile.
<i>Password</i>	Type a text (maximum 131 characters) as the password for the user profile.
<i>Permission</i>	Specify the action (RWDLCR) permitted. If one of the actions is not allowed, simple type "-" instead. R - Read File. W - Write File. D - Delete File. L - List directory. C - Create directory. R - Remove selected directory.
<i>Home path</i>	Set the path (maximum 159 characters) for the USB user profile.

Example

```
> usb user add 1 root 1234 R-DLCR /usr
>
```

Telnet Command: **vigbrg set**

This command is to configure specified WAN as bridge mode.

Syntax Description

vigbrg set -v <IP version> -w <WAN_idx> -l <LAN_idx> -e <0/1> -f<0/1>

Syntax Description

Parameter	Description
-v <IP version>	Indicate the IP version for the IP address. 4 - IPv4. 6 - IPv6.
-w <WAN_idx>	WAN_idx - Indicate the WAN interface. 1 - WAN1 2 - WAN2 3 - WAN3 4 - WAN4
-l <LAN_idx>	LAN_idx - Indicate the LAN interface. 1 - LAN1

	2 - LAN2 3 - LAN3 4 - LAN4
<i>e</i> <0/1>	Enable (1) or disable (0) the Vigor Bridge for WAN or/and LAN.
<i>f</i> <0/1>	Enable (1) or disable (0) the firewall functions.

Example

```
> vigbrg set -v 4 -w 1 -l 1 -e 1
[WAN1] IPv4 bridge is enable. Set subnet[LAN1]
```

Telnet Command: vigbrg closeall

This command can disable vigor bridge function.

Example

```
> vigbrg closeall
Close all bridge and bridge firewall
```

Telnet Command: vigbrg status

This command can show whether the Vigor Bridge Function is enabled or disabled.

Example

```
> vigbrg status
%Vigor Bridge Function is enable!

%Wan1 management is disable!
```

Telnet Command: **vigbrg cfgip**

This command allows users to transfer a bridge modem into ADSL router by accessing into and adjusting specified IP address. Users can access into Web UI of the router to manage the router through the IP address configured here.

Syntax

vigbrg cfgip <P Address>

Syntax Description

Parameter	Description
<i>IP Address</i>	It means to type an IP address for users to manage the router.

Example

```
> vigbrg cfgip 192.168.1.15
> vigbrg cfgip ?
% Vigor Bridge Config IP,
% Now: 192.168.1.15
```

Telnet Command: **vigbrg wanstatus**

This command can display the existed WAN connection status for the modem (change from ADSL router into bridge modem), including index number, MAC address, Stamp Time, PVC, VLAN port for Vigor Bridge Function.

Example

```
> vigbrg wanstatus
Vigor Bridge: Stop
WAN mac table:
Index   MAC Address           Stamp Time      PVC    VLan Port

DrayTek>
```

Telnet Command: vlan group

This command allows you to set VLAN group. You can set four VLAN groups. Please run *vlan restart* command after you change any settings.

Syntax

vlan group *id* <set/set_ex> <p1/p2/p3/p4/p5/p6/s1/s2/s3/s4>

Syntax Description

Parameter	Description
<i>id</i>	It means the group 0 to 7 for VLAN.
<i>set</i>	It indicates each port can join more than one VLAN group.
<i>set_ex</i>	It indicates each port can join one VLAN group at one time.
<i>p1/p2/p3/p4/p5/p6</i>	It indicates LAN port 1 to LAN port 6. To group LAN1, LAN2, LAN3, LAN4, LAN5 and/or LAN6 under one VLAN group, please type the port number(s) you want.
<i>s1/s2/s3/s4</i>	It is only available for WALN models.

Example

```
> vlan group 3 set p1 s3 s4
VLAN  p1  p2  p3  p4  p5  p6  s1  s2  s3  s4
-----
   3    V
>
```

Telnet Command: vlan off

This command allows you to disable VLAN function.

Syntax

vlan off

Example

```
> vlan off
VLAN is Disable!
Force subnet LAN2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20
to be disabled!!
>
```

Telnet Command: vlan on

This command allows you to enable VLAN function.

Syntax

vlan on

Example

```
> vlan on
VLAN is Enable!
>
```

Telnet Command: vlan pri

This command is used to define the priority for each VLAN profile setting.

Syntax

vlan pri *n pri_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN ID number. n=VLAN ID number (from 0 to 7).
<i>pri_no</i>	It means the priority of VLAN profile. pri_no=0 ~7 (from none to highest priority).

Example

```
> vlan pri 1 2
VLAN1: Priority=2
>
```

Telnet Command: vlan restart

This command can make VLAN settings restarted with newest configuration.

Syntax

vlan restart

Example

```
> vlan restart ?
VLAN restarts!!!
>
```

Telnet Command: vlan status

This command display current status for VLAN.

Syntax

vlan status

Example

```
> vlan status
VLAN is Disable :
-----
VLAN Enable VID Pri  p1 p2 p3 p4 p5 p6  subnet
-----
0    OFF    0  0                1:LAN1
1    OFF    0  2                1:LAN1
2    OFF    0  0                1:LAN1
3    OFF    0  0    V          1:LAN1
4    OFF    0  0                1:LAN1
5    OFF    0  0                1:LAN1
```

6	OFF	0	0	1:LAN1
7	OFF	0	0	1:LAN1
...				

Permit untagged device in P1 to access router: ON.				
>				

Telnet Command: vlan subnet

This command is used to configure the LAN interface used by the VLAN group.

Syntax

vlan subnet group_id <1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>

Syntax Description

Parameter	Description
<1/2/3/4/5/6/7/8/9/10/11/12/13/14/15/16/17/18/19/20>	It means interfaces, LAN1 ~ LAN20.

Example

<pre>> vlan subnet group_id 2 % Vlan Group-0 using LAN2 ! This setting will take effect after rebooting. Please use "sys reboot" command to reboot the router.</pre>

Telnet Command: vlan submode

This command changes the VLAN encapsulation mechanisms in the LAN driver.

Syntax

vlan submode <on|off|status>

Syntax Description

Parameter	Description
on	It means to enable the promiscuous mode.
off	It means to enable the normal mode.
status	It means to display if submode is normal mode or promiscuous mode.

Example

<pre>> vlan submode status % vlan subnet mode : normal mode ></pre>

Telnet Command: vlan tagged

This command is used to enable or disable the incoming of untagged packets.

Syntax

vlan tagged <n> <on/off>

vlan tagged <unlimited> <on/off>

vlan tagged <p1_untag> <on/off>

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 19.
<i>on/off</i>	It means to enable/disable the tagged VLAN.
<unlimited> <on/off>	unlimited on: It allows the incoming of untagged packets even all VLAN are tagged. unlimited off: It does not allow the incoming of untagged packets.
<p1_untag> <on/off>	P1_untag on: It allows the incoming of untagged packets from LAN port 1. P1_untag off: It does not allow the incoming of untagged packets from LAN port 1.

Example

```
> vlan tagged unlimited on
Unlimited mode is ON
>
```

Telnet Command: vlan vid

This command is used to configure VID number for each VLAN channel.

Syntax

vlan vid *n* *vid_no*

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>vid_no</i>	It means the value of VLAN ID. Enter the value as the VLAN ID number. The range is from 0 to 4095.

Example

```
> vlan vid 1 4095
VLAN1, vid=4095
DrayTek>
```

Telnet Command: vlan sysvid

This command is used to modify and show the scope (reserved 78) of the VLAN IDs used internally by the system.

Syntax

vlan sysvid <show | *n*>

Syntax Description

Parameter	Description
<i>n</i>	It means VLAN channel. The range is from 0 to 7.
<i>vid_no</i>	It means the value of VLAN ID. Enter the value as the VLAN ID number. The range is from 0 to 4095.

Example

```
>vlan sysvid 100
You have set system VLAN ID to range: 100 ~ 251,
We recommend that you reboot the system now.
```

Telnet Command: vpn l2lset

This command allows users to set advanced parameters for LAN to LAN function.

Syntax

```
vpn l2lset <list index>peerid<peerid>
vpn l2lset <list index> localid <localid>
vpn l2lset <list index>main <auto/proposal index>
vpn l2lset <list index> aggressive <desg1/desg2/aesg1/aesg2/aesg5/aesg14>
vpn l2lset <list index> pfs <on/off>
vpn l2lset <list index> phase1<lifetime>
vpn l2lset <list index> phase2<lifetime>
vpn l2lset <list index> x509localid <0/1>
```

Syntax Description

Parameter	Description
<i>list index</i>	It means the index number of L2L (LAN to LAN) profile.
<i>peerid</i>	It means the peer identity for aggressive mode.
<i>localid</i>	It means the local identity for aggressive mode.
<i>main</i>	It means to choose proposal for main mode.
<i>auto index</i>	It means to choose default proposals.
<i>proposal index</i>	It means to choose specified proposal.
<i>aggressive</i>	It means the chosen DH group for aggressive mode
<i>pfs</i>	It means "perfect forward secrete".
<i>on/off</i>	It means to turn on or off the PFS function.
<i>phase1</i>	It means phase 1 of IKE.
<i>lifetime</i>	It means the lifetime value (in second) for phase 1 and phase 2.
<i>phase2</i>	It means phase 2 of IKE.

Example

```
> vpn l2lset 1 peerid 20
```

```
>
```

Telnet Command: vpn l2lDrop

This command allows users to terminate current LAN to LAN VPN connection.

Syntax

vpn l2lDrop l2lname <name>

vpn l2lDrop l2lidx <idx>

vpn l2lDrop h2lname <name>

vpn l2lDrop h2lidx <idx>

vpn l2lDrop <ifno>

vpn l2lDrop

Syntax Description

Parameter	Description
<i>l2lname</i> <name>	Terminate LAN to LAN VPN profile by specifying the profile name.
<i>l2lidx</i> <idx>	Terminate LAN to LAN profile name by specifying the index number (1 to 192) of the profile.
<i>h2lname</i> <name>	Terminate remote dial-in user profile (1 to 200) by specifying the profile name.
<i>h2lidx</i> <idx>	Terminate remote dial-in user profile by specifying the index number (1 to 200) of the profile.
<ifno>	Drop VPN by vpn ifno.

Example

```
> vpn l2lDrop
> vpn l2lDrop 30
% Drop VPN with ifno : 30
```

Telnet Command: vpn dinset

This command allows users to configure setting for remote dial-in VPN profile.

Syntax

vpn dinset setdefault

vpn dinset <list index>

vpn dinset <list index> <on/off>

vpn dinset <list index> username <USERNAME>

vpn dinset <list index> password <PASSWORD>

vpn dinset <list index> motp <on/off>

vpn dinset <list index> pin_secret <pin> <secret>

vpn dinset <list index> timeout <value>

vpn dinset <list index> dintype <Type> <on/off>

Syntax Description

Parameter	Description
setdefault	It means to reset the VPN profiles with factory default settings.
<list index>	It means the index number of the profile.
<on/off>	It means to enable or disable the profile. on – Enable. off – Disable.
username <USERNAME>	It means to set the username for the remote dial-in VPN profile.
password <PASSWORD>	It means to set the password for the remote dial-in VPN profile.
motp <on/off>	It means to enable or disable the authentication with mOTP function. on – Enable. off – Disable.
pin_secret<pin> <secret>	It means to set PIN code with secret. <pin> : Enter the code for authentication (e.g, 1234). <secret> : Use the 32 digit-secret number generated by mOTP in the mobile phone (e.g., e759bb6f0e94c7ab4fe6)
timeout <value>	It means to set idle timeout (0 to 9999). Default is 300 seconds.
<list index> dintype <Type> <on/off>	<list index>: Specify the index number of the VPN profile. <Type>: Allowed Dial-In Type includes 0, 1, 2 and 3. <on/off>: on, allowed using the dial-in type to create VPN connection; off, not allowed using the dial-in type to create VPN connection. 0: PPTP, 1: IPsec Tunnel, 2: L2TP with IPsec Policy, 3: SSL Tunnel

Example

```

> vpn dinset 1
Dial-in profile index 1
Profile Name: ???
Status: Deactive
Mobile OTP: Disabled
Password:
Idle Timeout: 300 sec
> vpn dinset 1 on
% set profile active
> vpn dinset 1 motp on
% Enable Mobile OTP mode!>
> vpn dinset 1 pin_secret 1234 e759bb6f0e94c7ab4fe6
> vpn dinset 1

Dial-in profile index 1

Profile Name: ???
Status: Active

Mobile OTP: Enabled

PIN: 1234

```

Secret: e759bb6f0e94c7ab4fe6

Idle Timeout: 300 sec

Telnet Command: vpn subnet

This command allows users to specify a subnet selection for the specified remote dial-in VPN profile.

Syntax

vpn subnet <index> <1/2/3/4/5/6>

Syntax Description

Parameter	Description
<index>	It means the index number of the VPN profile.
<1/2/3/4/5/6>	1 - it means LAN1 2 - it means LAN2. 3 - it means LAN3 4 - it means LAN4. 5 - it means LAN5. 6 - it means LAN6.

Example

```
> vpn subnet 1 2  
>
```

Telnet Command: vpn setup

This command allows users to setup VPN for different types.

Syntax

Command of PPTP Dial-Out

vpn setup <index> <name> **pptp_out** <ip> <usr> <pwd> <nip> <nmask>

Command of IPSec Dial-Out

vpn setup <index> <name> **ipsec_out** <ip> <key> <nip> <nmask>

Command of L2Tp Dial-Out

vpn setup <index> <name> **l2tp_out** <ip> <usr> <pwd> <nip> <nmask>

Command of Dial-In

vpn setup <index> <name> **dialin** <ip> <usr> <pwd> <key> <nip> <nmask>

Syntax Description

Parameter	Description
For PPTP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.

<usr> <pwd>	It means the user and the password required for the PPTP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 pptp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For IPsec Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 ipsec_out 1.2.3.4 1234 192.168.1.0 255.255.255.0
For L2TP Dial-Out	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address to dial to.
<usr> <pwd>	It means the user and the password required for the L2TP connection.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 l2tp_out 1.2.3.4 vigor 1234 192.168.1.0 255.255.255.0
For Dial-In	
<index>	It means the index number of the profile.
<name>	It means the name of the profile.
<ip>	It means the IP address allowed to dial in.
<usr> <pwd>	It means the user and the password required for the PPTP/L2TP connection.
<key>	It means the value of IPsec Pre-Shared Key.
<nip> <nmask>	It means the remote network IP and the mask. e.g., vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0

Example

```
> vpn setup 1 name1 dialin 1.2.3.4 vigor 1234 abc 192.168.1.0 255.255.255.0
% Profile Change Log ...

% Profile Index : 1
% Profile Name : name1
% Username : vigor
% Password : 1234
% Pre-share Key : abc
% Call Direction : Dial-In
% Type of Server : ISDN PPTP IPSec L2TP
```

```
% Dial from : 1.2.3.4
% Remote Network IP : 192.168.1.0
% Remote Network Mask : 255.255.255.0
>
```

Telnet Command: vpn option

This command allows users to configure settings for LAN to LAN profile.

Syntax

vpn option <index> <cmd1>=<param1> [<cmd2>=<para2> | ...]

Syntax Description

Parameter	Description
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32
For Common Settings	
<index>	It means the index number of the profile.
pname	It means the name of the profile.
ena	It means to enable or disable the profile. on - Enable off - Disable
thr	It means the way that VPN connection passes through. Available settings are w1f, w1o, w2f, and w2o. w1f - WAN1 First. w1o - WAN1 Only. w2f - WAN2 First. w2o - WAN2 Only.
nnpkt	It means the NetBios Naming Packet. on - Enable the function to pass the packet. off - Disable the function to block the packet.
dir	It means the call direction. Available settings are b, o and i. b - Both o - Dial-Out i - Dial-In.
idle=[value]	It means Always on and Idle Time out. Available values include: -1 - it means always on for dial-out. 0 - it means always on for dial-in. Other numbers (e.g., idle=200, idle=300, idle=500) mean the router will be idle after the interval (seconds) configured here.
palive	It means to enable PING to keep alive. -1 - disable the function. 1,2,3,4 - Enable the function and PING IP 1.2.3.4 to keep alive.
For Dial-Out Settings	
ctype	It means "Type of Server I am calling". "ctype=t" means PPTP. "ctype=s" means IPSec.

	"ctype= l" means L2TP(IPSec Policy None). "ctype= l1" means L2TP(IPSec Policy Nice to Have). "ctype= l2" means L2TP(IPSec Policy Must).
<i>dialto</i>	It means Server IP/Host Name for VPN. (such as draytek.com or 123.45.67.89).
<i>ltype</i>	It means Link Type. "ltype=0" means "Disable". "ltype=1" means "64kbps". "ltype=2" means "128kbps". "ltype=3" means "BOD".
<i>oname</i>	It means Dial-Out Username. "oname=admin" means to set Username = admin.
<i>opwd</i>	It means Dial-Out Password "opwd=1234" means to set Password = 1234.
<i>pauth</i>	It means PPP Authentication. "pauth=pc" means to set PPP Authentication = PAP&CHAP. "pauth=p" means to set PPP Authentication = PAP Only
<i>ovj</i>	It means VJ Compression. "ovj=on/off" means to enable/disable VJ Compression.
<i>okey</i>	It means IKE Pre-Shared Key. "okey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>ometh</i>	It means IPSec Security Method. "ometh=ah/" means AH. "ometh=espd/espda/" means ESP DES without/with Authentication. "ometh=esp3/esp3a/" means ESP 3DES without/with Authentication. "ometh=espa/espaa" means ESP AES without/with Authentication.
<i>sch</i>	It means Index(1-15) in Schedule Setup. sch=1,3,5,7 Set schedule 1->3->5->7
<i>rcallb</i>	It means Require Remote to Callback. "rcallb=on/off" means to enable/disable Set Require Remote to Callback.
<i>ikeid</i>	It means IKE Local ID. "ikeid=vigor" means Set Local ID = vigor.
For Dial-In Settings	
<i>itype</i>	It means Allowed Dial-In Type. Available settings include: "itype=t" means PPTP. "itype=s" means IPSec. "itype=L1" means L2TP (None). "itype=L1" means L2TP(Nice to Have). "itype=l2" means L2TP(Must).
<i>peer</i>	It means specify Peer VPN Server IP for Remote VPN Gateway. Type "203.12.23.48" means to allow VPN dial-in with IP address of 203.12.23.48. Type "off" means any remote IP is allowed to dial in.
<i>peerid</i>	It means the peer ID for Remote VPN Gateway. Type "draytek" means the word is used as local ID.
<i>iname</i>	It means Dial-in Username.

	"iname=admin" means to set username as "admin".
<i>ipwd</i>	It means Dial-in Password. "ipwd=1234" means to set password as "1234".
<i>ivj</i>	It means VJ Compression. "ivj=on/off" means to enable /disable VJ Compression.
<i>ikey</i>	It means IKE Pre-Shared Key. "ikey=abcd" means to set IKE Pre-Shared Key = abcd.
<i>imeth</i>	It means IPsec Security Method "imeth=h" means "Allow AH". "imeth=d" means "Allow DES". "imeth=3" means "Allow 3DES". "imeth=a" means "Allow AES".
For TCP/IP Settings	
<i>mywip</i>	It means My WAN IP. "mywip=1.2.3.4" means to set My WAN IP as "1.2.3.4".
<i>rgip</i>	It means Remote Gateway IP. "rgip=1.2.3.4" means to set Remote Gateway IP as "1.2.3.4".
<i>rnip</i>	It means Remote Network IP. "rnip=1.2.3.0" means to set Remote Network IP as "1.2.3.0".
<i>rnmask</i>	It means Remote Network Mask. "rnmask=255.255.255.0" means to set Remote Network Mask as "255.255.255.0".
<i>rip</i>	It means RIP Direction. "rip=d" means to set RIP Direction as "Disable". "rip=t" means to set RIP Direction as "TX". "rip=r" means to set RIP Direction as "RX". "rip=b" means to set RIP Direction as "Both".
<i>mode</i>	It means the option of "From first subnet to remote network, you have to do". "mode=r" means to set Route mode. "mode=n" means to set NAT mode.
<i>droute</i>	It means to Change default route to this VPN tunnel (Only single WAN supports this). droute=on/off means to enable/disable the function.

Example

```
> vpn option 1 idle=250
% Change Log..

% Idle Timeout = 250
```

Telnet Command: vpn mroute

This command allows users to list, add or delete static routes for a certain LAN to LAN VPN profile.

Syntax

vpn mroute <index> list

vpn mroute <index> add <network ip>/<mask>

vpn mroute <index> **del** <network ip>/<mask>

Syntax Description

Parameter	Description
<i>list</i>	It means to display all of the route settings.
<i>add</i>	It means to add a new route.
<i>del</i>	It means to delete specified route.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32
<network ip>/<mask>	Enter the IP address with the network mask address.

Example

```
> vpn mroute 1 add 192.168.5.0/24
% 192.168.5.0/24
% Add new route 192.168.5.0/24 to profile 1
```

Telnet Command: vpn list

This command allows users to view LAN to LAN VPN profiles.

Syntax

vpn list <index> **all**

vpn list <index>**com**

vpn list<index>**out**

vpn list <index> **in**

vpn list<index>**net**

Syntax Description

Parameter	Description
<i>all</i>	It means to list configuration of the specified profile.
<i>com</i>	It means to list common settings of the specified profile.
<i>out</i>	It means to list dial-out settings of the specified profile.
<i>in</i>	It means to list dial-in settings of the specified profile.
<i>net</i>	It means to list Network Settings of the specified profile.
<index>	It means the index number of the profile. Available index numbers: 1 ~ 32

Example

```
> vpn list 32 all
% Common Settings

% Profile Name           : ???
% Profile Status         : Disable
% Netbios Naming Packet  : Pass
```

```

% Call Direction      : Both
% Idle Timeout       : 300
% PING to keep alive  : off

% Dial-out Settings

% Type of Server      : PPTP
% Link Type:         : 64k bps
% Username            : ???
% Password            :
% PPP Authentication  : PAP/CHAP
% VJ Compression     : on
% Pre-Shared Key      :
% IPSec Security Method : AH
% Schedule            : 0,0,0,0
% Remote Callback     : off
% Provide ISDN Number : off
% IKE phase 1 mode    : Main mode
% IKE Local ID        :

% Dial-In Settings

--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---
> vpn list 1 com
% Common Settings

% Profile Name        : ???
% Profile Status      : Disable
% Netbios Naming Packet : Pass
% Call Direction      : Both
% Idle Timeout       : 300
% PING to keep alive  : off
>

```

Telnet Command: **vpn remote**

This command allows users to enable or disable *PPTP/IPSec/L2TP* VPN service.

Syntax

vpn remote [*PPTP/IPSec/L2TP*] [*on/off*]

Syntax Description

Parameter	Description
<i>PPTP/IPSec/L2TP</i>	There are four types to be selected.
<i>on/off</i>	on – enable VPN remote setting. off – disable VPN remote setting.

Example

```

> vpn remote PPTP on
Set PPTP VPN Service : On

```

Please restart the router!!

Telnet Command: vpn 2ndsubnet

This command allows users to enable second subnet IP as VPN server IP.

Syntax

vpn 2ndsubnet on

vpn 2ndsubnet off

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable second subnet.

Example

```
> vpn 2ndsubnet on
%Enable second subnet IP as VPN server IP!
```

Telnet Command: vpn NetBios

This command allows users to enable or disable NetBios for Remote Access User Accounts or LAN-to-LAN Profile.

Syntax

vpn NetBios set <H2I/L2I> <index> <Block/Pass>

Syntax Description

Parameter	Description
<i><H2I/L2I></i>	H2I means Remote Access User Accounts. L2I means LAN-to-LAN Profile. Specify which one will be applied by NetBios.
<i><index></i>	The index number of the profile.
<i><Block/Pass></i>	Pass - Have an inquiry for data transmission between the hosts located on both sides of VPN Tunnel while connecting. Block - When there is conflict occurred between the hosts on both sides of VPN Tunnel in connecting, set it block data transmission of Netbios Naming Packet inside the tunnel.

Example

```
> vpn NetBios set H2l 1 Pass
% Remote Dial In Profile Index [1] :
% NetBios Block/Pass: [PASS]
```

Telnet Command: vpn mss

This command allows users to configure the maximum segment size (MSS) for different TCP types.

Syntax

vpn mss show

vpn mss default

vpn mss set <connection type> <TCP maximum segment size range>

Syntax Description

Parameter	Description
<i>show</i>	It means to display current setting status.
<i>default</i>	TCP maximum segment size for all the VPN connection will be set as 1360 bytes.
<i>set</i>	Use it to specify the connection type and value of MSS.
<connection type>	1~4 represent various type. 1 - PPTP 2 - L2TP 3 - IPSec 4 - L2TP over IPSec
<TCP maximum segment size range>	Each type has different segment size range. PPTP - 1 ~ 1412 L2TP - 1 ~ 1408 IPSec - 1 ~ 1381 L2TP over IPSec - 1 ~ 1361

Example

```
>vpn mss set 1 1400
% VPN TCP maximum segment size (MSS) :
  PPTP  = 1400
  L2TP  = 1360
  IPSec = 1360
  L2TP over IPSec = 1360
>vpn mss show
VPN TCP maximum segment size (MSS) :
  PPTP  = 1400
  L2TP  = 1360
  IPSec = 1360
  L2TP over IPSec = 1360
```

Telnet Command: vpn ike

This command is used to display IKE memory status and leakage list.

Syntax

vpn ike -q

Example

```
> vpn ike -q
IKE Memory Status and Leakage List

# of free L-Buffer=95, minimum=94, leak=1
# of free M-Buffer=529, minimum=529 leak=3
```

```
# of free S-Buffer=1199, minimum=1198, leak=1
# of free Msgid-Buffer=1024, minimum=1024
```

Telnet Command: vpn Multicast

This command allows users to pass or block the multi-cast packet via VPN.

Syntax

vpn Multicast set <H2I/L2I> <index> <Block/Pass>

Syntax Description

Parameter	Description
<H2I/L2I>	H2I means Host to LAN (Remote Access User Accounts). L2I means LAN-to-LAN Profile.
<index>	The index number of the profile.
<Block/Pass>	Set Block/Pass the Multicast Packets. The default is Block.

Example

```
> vpn Multicast set L2I 1 Pass
% Lan to Lan Profile Index [1] :
% Status Block/Pass: [PASS]
```

Telnet Command: vpn pass2nd

This command allows users to determine if the packets coming from the second subnet passing through current used VPN tunnel.

Syntax

vpn pass2nd[on]

vpn pass2nd [off]

Syntax Description

Parameter	Description
on/off	on - the packets can pass through NAT. off - the packets cannot pass through NAT.

Example

```
> vpn pass2nd on
% 2nd subnet is allowed to pass VPN tunnel!
```

Telnet Command: vpn pass2nat

This command allows users to determine if the packets passing through by NAT or not when the VPN tunnel disconnects.

Syntax

vpn pass2nat [on]

vpn pass2nat [*off*]

Syntax Description

Parameter	Description
<i>on/off</i>	on – the packets can pass through NAT. off – the packets cannot pass through NAT.

Example

```
> vpn pass2nat on
% Packets would go through by NAT when VPN disconnect!!
```

Telnet Command: wan ppp_mru

This command allows users to adjust the size of PPP LCP MRU. It is used for specific network.

Syntax

wan ppp_mru <WAN interface number> <MRU size >

Syntax Description

Parameter	Description
<WAN interface number>	Type a number to represent the physical interface (1 to 23).
<MRU size >	It means the number of PPP LCP MRU. The available range is from 1400 to 1600.

Example

```
> wan ppp_mru 1 ?
% Now: 1492
> wan ppp_mru 23 ?
% Now: 1500
>
```

Telnet Command: wan mtu / wan mtu2

This command allows users to adjust the size of MTU for WAN1/WAN2.

Syntax

wan mtu <value>

wan mtu2 <value>

Syntax Description

Parameter	Description
<i>value</i>	It means the number of MTU for PPP. The available range is from 1000 to 1500. For Static IP/DHCP, the maximum number will be 1500. For PPPoE, the maximum number will be 1492. For PPTP/L2TP, the maximum number will be 1460.

Example

```
> wan mtu 1100
> wan mtu ?
Static IP/DHCP (Max MSS: 1500)
PPPoE(Max MSS: 1492)
PPTP/L2TP(Max MSS: 1460)
% wan ppp_mss <MSS size: 1000 ~ 1500>
% Now: 1100
```

Telnet Command: wan dns

This command allows users to configure primary and / or secondary DNS server.

Syntax

wan dns <wan_no><dns_select><ipv4_addr>

Syntax Description

Parameter	Description
<i>wan_no</i>	Select WAN interface. 1:WAN1 2:WAN2 3:WAN3 4:WAN4 5:WAN5
<i>dns_select</i>	Specify primary and / or secondary DNS server. pri - It means primary DNS server. sec - It means secondary DNS server.
<i>ipv4_addr</i>	Enter the IP address of DNS server.

Example

```
> wan dns 1 pri 168.95.1.1
% Set WAN1 primary DNS done.
% Now: 168.95.1.1
```

Telnet Command: wan DF_check

This command allows you to enable or disable the function of DF (Don't fragment)

Syntax

wan DF_check <on/off>

Syntax Description

Parameter	Description
<i>on/off</i>	It means to enable or disable DF.

Example

```
> wan DF_check on
%DF bit check enable!
> wan DF_check off
%DF bit check disable (reset DF bit)!
```

Telnet Command: wan disable

This command allows you to disable WAN connection.

Example

```
> wan disable WAN
%WAN disabled.
```

Telnet Command: wan enable

This command allows you to disable wan connection.

Example

```
> wan enable WAN
%WAN1 enabled.
```

Telnet Command: wan forward

This command allows you to enable or disable the function of WAN forwarding. The packets are allowed to be transmitted between different WANs.

Syntax

wan forward <on/off>

Syntax Description

Parameter	Description
on/off	It means to enable or disable WAN forward.

Example

```
> wan forward ?
%WAN forwarding is Disable!

> wan forward on
%WAN forwarding is enable!
```

Telnet Command: wan status

This command allows you to display the status of WAN connection, including connection mode, TX/RX packets, DNS settings and IP address.

Example

```
> wan status
BWAN1: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

BWAN2: Offline, stall=N
Mode: DHCP Client, Up Time=00:00:00
IP=---, GW IP=---
```

```

TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

BWAN3: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

BWAN4: Offline, stall=N
Mode: ---, Up Time=00:00:00
IP=---, GW IP=---
TX Packets=0, TX Rate(bps)=0, RX Packets=0, RX Rate(bps)=0
Primary DNS=0.0.0.0, Secondary DNS=0.0.0.0

CTRL_WAN5: Online, stall=N
--- MORE ---  ['q': Quit, 'Enter': New Lines, 'Space Bar': Next Page] ---

```

Telnet Command: wan modem / wan modem2

This command, wan modem, allows you to configure 3G/4G USB Modem (PPP mode) of WAN3. The command, wan modem2, allows you to configure 3G/4G USB Modem (PPP mode) of WAN4.

Syntax

wan modem <init/init2/dial/pin><string>

wan modem paponly <on/off>

wan modem backup_wait <value>

wan modem wakeup <on/off/value>

wan modem vid <id>

wan modem pid <id>

wan modem status

Syntax Description

Parameter	Description
<i>init</i>	Set initial modem AT command (default value is "AT&FE0V1X1&D2&C1S0=0").
<i>init2</i>	Set the second initial modem AT command.
<i>dial</i>	Set dial modem AT command (default value is "ATDT*99#").
<i>pin</i>	Set PIN code for SIM card. "0":disable
<i>paponly</i>	It means PAP Only. Set the PPP authentication of the USB WAN. on: None. off: PAP or CHAP.
<i>backup_wait</i>	Set waiting time after boot if USB WAN is in backup mode. This waiting time is reserved for the dial of main WANs so that the backup USB WAN will not go up first. Available setting is from 1 to 255. Unit is second.
<i>pipe</i>	It is for RD debug only. Please don't use it without our advice.

<i>wakeup [on/off]</i>	It is for RD debug only. Please don't use it without our advice.
<i>vid</i>	Set VID of VID/PID match to bind the USB modem to specify WAN interface. By default, this match is not set (0x0/0x0) and the router specifies WAN interface by USB port.
<i>pid</i>	Set PID of VID/PID match to bind the USB modem to specify WAN interface. By default, this match is not set (0x0/0x0) and the router specifies WAN interface by USB port.
<i>status</i>	Display current status of USB modem.

Example

```
> wan modem pin 0000
> wan modem status
Modem Link Speed=0
Current Signal Strength=0
Last Fail Message: (null)
Current Connect Stage: (null)
```

Telnet Command: wan wimax

This command allows you to enable or disable WAN 3G/4G DHCP mode for Vigor router.

Syntax

wan wimax <on/off>

Syntax Description

Parameter	Description
<i>On</i>	It means to enable WAN 3G/4G DHCP mode.
<i>off</i>	It means to disable WAN 3G/4G DHCP mode.

Example

```
> wan wimax on
> wan wimax ?
Current status is wimax ON
DHCP client Enabled
Current wimax zone=0
Current wimax username=
Current wimax password=
Current wimax identity=
```

Telnet Command: wan detect

This command allows you to configure WAN connection detection. When Ping Detection is enabled (for Static IP or DHCP or PPPoE mode), Router pings specified IP addresses to detect the WAN connection.

Syntax

wan detect <wan1/wan2/...> <on/off/strict/always_on>

wan detect <wan1> <off> -t <time>
wan detect <wan1> <off> -i <Interval>
wan detect <wan1/wan2/...> **target** <ip addr>
wan detect <wan1/wan2/...> **target2** <ip addr>
wan detect <wan1/wan2/...> **target_gw** <1/0>
wan detect <wan1/wan2/...> **tll** <value>
wan detect <wan1/wan2/...> **interval** <interval>
wan detect <wan1/wan2/...> **retry** <retry>
wan detect status

Syntax Description

Parameter	Description
<i>on</i>	Enable ping detection. The IP address of the target shall be set.
<i>off</i>	Enable ARP detection (default).
<i>strict</i>	Enable Strict ARP detection.
<i>-t <time></i>	Set the time (0 to 256).
<i>-i <interval></i>	Set the time interval (0 to time value).
<i>always_on</i>	Disable link detect, always connected(only support static IP)
<i>target <ip addr></i>	Set the ping target. <ip addr> : It means the IP address used for detection. Type an IP address in this field.
<i>target2 <ip addr></i>	Set the secondary ping target. <ip addr>: It means the IP address used for detection. Type an IP address in this field.
<i>target_gw</i>	Set whether to use gateway as ping target. (1: yes 0: no) Note that USB WAN (PPP mode) cannot support PING gateway
<i>tll</i>	It means to set the ping TTL value (work as trace route) If you do not set any value for tll here or just type 0 here, the system will use default setting (255) as the tll value.
<i>interval <interval></i>	Set the interval between each ping operation. Available setting is between 1 and 3600. The unit is second. <interval>: Type a value.
<i>retry <retry></i>	Set how many ping operations are retried before the Router judges that the WAN connection is disconnected. Available setting is between 1 and 255. The unit is times. <retry> : Type a number.
<i>status</i>	It means to show the current status.

Example

```

> wan detect status
WAN1: arp detect, send time=30, Interval = 5
WAN2: arp detect, send time=30, Interval = 5
WAN3: arp detect, send time=30, Interval = 5
WAN4: arp detect, send time=30, Interval = 5
WAN5: always on
WAN6: arp detect, send time=30, Interval = 5
WAN7: arp detect, send time=30, Interval = 5

```

```

WAN8: arp detect, send time=30, Interval = 5
WAN9: arp detect, send time=30, Interval = 5
WAN10: arp detect, send time=30, Interval = 5
WAN11: arp detect, send time=30, Interval = 5
WAN12: arp detect, send time=30, Interval = 5
WAN13: arp detect, send time=30, Interval = 5
WAN14: arp detect, send time=30, Interval = 5
WAN15: arp detect, send time=30, Interval = 5
...
...

```

Telnet Command: wan lb

This command allows you to enable/disable for each WAN to join auto load balance member.

Syntax

wan lb <wan1/wan2/...> on

wan lb <wan1/wan2/...> off

wan lb <ip/session>

wan lb status

Syntax Description

Parameter	Description
<i>wan1/wan2/....</i>	Specify which WAN will be applied with load balance.
<i>on</i>	Make WAN interface as the member of load balance.
<i>off</i>	Cancel WAN interface as the member of load balance.
<i><ip/session></i>	Set the load balance mode to IP(default) or session based.
<i>status</i>	Show the current status.

Example

```

> wan lb ip
Set OK

DrayTek> wan lb status
WAN1: on
WAN2: on
WAN3: on
WAN4: on
WAN5: off
WAN6: on
...
WAN23: on
Load balance mode is IP based

>

```

Telnet Command: wan lbel

This command allows you to define protocol, port and name for the traffic not to be applied with load balance.

Syntax

wan lbel <enable> <idx> <protocol> <port> <portend> <comment>

wan lbel status <idx>

Syntax Description

Parameter	Description
<i>idx</i>	Enter the index number (1 to 32) for the exception list.
<i>enable</i>	Enter 1 (enable) or 0 (disable) the selected profile.
<i>protocol</i>	<protocol>: Enter TCP, UDP, all. "All" means "TCP+UDP".
<i>port</i>	Enter a number (0 to 65535) as starting port. If it is set with "0", then the port range (1 to 65535) will not be applied with load balance.
<i>portend</i>	Enter a number (0 to 65535) as ending port (must be greater than starting port).
<i>comment</i>	Enter a string (less than 11 characters) as a comment.
<i>status</i>	Show the current status.

Example

```
> wan lbel 1 1 tcp 0 1 0 300 testforload
error => 0 < port <= port_end < 65536
> wan lbel status 1
whitelist[1] status:enable, protocol:udp, port:3478~3478, comment:STUN
>
```

Telnet Command: wan mvlan

This command allows you to configure multi-VLAN for WAN and LAN. It supports pure bridge mode (modem mode) between Ethernet WAN and LAN port.

Syntax

wan mvlan <pvc_no/status/save/enable/disable> <on/off/clear/tag tag_no> <service type/vlan priority> <px ... >

Syntax Description

Parameter	Description
<i>pvc_no</i>	It means index number of PVC. There are 8 PVC, 0(Channel-1) to 7(Channel-8) allowed to be configured. However, bridge mode can be set on PVC number 2 to 7.
<i>status</i>	It means to display the whole Bridge status.
<i>save</i>	It means to save the configuration into flash of Vigor router.
<i>enable/disable</i>	It means to enable/disable the Multi-VLAN function.
<i>on/off</i>	It means to turn on/off bridge mode for the specific channel.
<i>clear</i>	It means to turn off/clear the port.
<i>tag tag_no</i>	It means to tag a number for the VLAN.

	-1: No need to add tag number. 1-4095: Available setting numbers used as tagged number.
<i>service type</i>	It means to specify the service type for VLAN. 0: Normal. 1: IGMP.
<i>vlan priority</i>	It means to specify the priority for the VALN setting. Range is from 0 to 7.
<i>px</i>	It means LAN port. Available setting number is from 2 to 4. Port number 1 is locked for NAT usage.

Example

PVC 7 will map to LAN port 2/3/4 in bridge mode; service type is Normal. No tag added.

```
> wan mvlan 7 on p2 p3 p4
PVC Bridge p1 p2 p3 p4 p5 p6 Service Type Tag Priority
-----
7 ON 0 0 1 1 0 0 Normal 0(OFF) 0
>
```

Telnet Command: wan multifno

This command allows you to specify a channel (in Multi-VLAN) to make bridge connection to a specified WAN interface.

Syntax

wan multifno <channel #><WAN interface #>

wan multifno status

Syntax Description

Parameter	Description
<i>channel #</i>	There are several (8 to 23) channels including VLAN and PVC. Available settings are: 1=Channel 1 2=Channel 2 3=Channel 3 4=Channel 4 ...
<i>WAN interface #</i>	Type a number to indicate the WAN interface. 1: WAN1 2: WAN2
<i>status</i>	It means to display current bridge status.

Example

```
> wan multifno 5 1
% Configured channel 5 uplink to WAN1
> wan multifno status
% Channel 3 uplink ifno: 3
% Channel 4 uplink ifno: 3
% Channel 5 uplink ifno: 3
% Channel 6 uplink ifno: 3
% Channel 7 uplink ifno: 3
```

```
>
```

Telnet Command: wan vlan

This command allows you to configure the VLAN tag of WAN1 or WAN2.

Syntax

wan vlan wan <#> **tag** <value>

wan vlan wan <#> <enable/disable>

wan vlan wan <#> **pri** <value>

wan vlan stat

Syntax Description

Parameter	Description
<i>wan</i> <#>	Specify which WAN interface will be tagged.
<i>tag</i> <value>	Type a number for tagging on WAN interface.
<i>enable/disable</i>	Enable: Specified WAN interface will be tagged. Disable: Disable the function of tagging on WAN interface.
<i>pri</i> <value>	Set the priority of the WAN interface. <value>: 0 to 7
<i>stat</i>	Display current VLAN status.

Example

```
> wan vlan wan 1 pri 6
> Set priority to 6 for WAN1
> wan vlan stat
DrayTek> wan vlan stat
% Interface      Pri      Tag      Enabled
% =====
% WAN1           6        0
% WAN2           0        0
% WAN3           0        0
% WAN4           0        0
% WAN5           0        0
```

Telnet Command: wan detect_mtu

This command allows you to run a WAN MTU Discovery. The user can specify an IPv4 target to ping and find the suitable MTU size of the WAN interface.

Syntax

wan detect_mtu -i <Host/IP address> -s <mtu_size> -d <decrease size> -w <1: WAN1 ,2: WAN2, ...> -c <count>

Syntax Description

Parameter	Description
-i <Host/IP address>	Specify the IPv4 target to detect. If can be an IPv4 address or domain name. Host/IP address: Enter the IP address/domain name of the target.

-s <mtu_size>	Set the MTU size base for Discovery. mtu_size: Available setting is 1000 ~ 1500.
-d <decrease size>	Set the MTU size to decrease between detections. decrease size: Available setting is 1 ~ 100.
-w <number>	Specify the WAN interface. number: Enter the number of WAN interface. 1: WAN1 2: WAN2....and etc.
-c <count>	Set the maximum times of ping failure during a Discovery. count: Available settings are 1 ~ 10. Default value is 3.

Example

```
> wan detect_mtu -w 1 -i 8.8.8.8 -s 1500 -d 30 -c 10
detecting mtu size:1500!!!

mtu size:1470!!!
```

Telnet Command: wan detect_mtu6

This command allows you to run a WAN MTU Discovery. The user can specify an IPv6 target to ping and find the suitable MTU size of the WAN interface.

Syntax

wan detect_mtu6 -i <Host/IP address> -s <mtu_size> -w <number>

Syntax Description

Parameter	Description
-i <Host/IP address>	Specify the IPv6 target to detect. If can be an IPv6 address or domain name. Host/IP address: Enter the IP address/domain name of the target.
-s <mtu_size>	Specify the size of MTU. mtu_size: Available setting is 1280 ~ 1500.
-w <number>	Specify the WAN interface number: Enter the number of WAN interface. 1: WAN1 2: WAN2....and etc.

Example

```
> wan detect_mtu6 -w 2 -i 2404:6800:4008:c06::5e -s 1500
>
```

Telnet Command: wan failover

This command is used to configure failover WAN.

Syntax

wan failover off <index>

wan failover on <1><2><3><4><5><6>

wan failover show [index]

Syntax Description

Parameter	Description
<i>failover off <index></i>	Set specified WAN interface to always on. index – Ranges from 1 to 7.
<i>failover on <1><2><3><4><5><6></i>	There are six fields which represent different options. Field 1 – Specify WAN interface as failover WAN by typing 1 to 7. Field 2 – Enable / disable the action for the failover WAN. Such action is "Active When selected WAN [disconnect/reached traffic threshold]". 0 – Disable 1 – Enable Field 3 – Enable / disable the action for the failover WAN. Such action is "Active When [any/all] of selected WAN disconnect or reached traffic threshold". 0 – Disable 1 – Enable Field 4 – Specify main WAN by typing 1 to 7. The main WAN will be set to always on. Field 5 – Specify traffic threshold [Download threshold(Kbps)]. Field 6 – Specify traffic threshold [Upload threshold (Kbps)]. For example, WAN 2 will be set as failover, and will be active when any of selected WANs has reached traffic threshold. WAN 4 is the selected WAN. Download threshold : 50 Kbps; Upload threshold : 20 Kbps. You can type as follows: <i>wan failover on 2 1 0 4 50 20</i>
<i>show <index></i>	Display parameters settings for WAN interface. index – Ranges from 1 to 7.

Example

```
> wan failover on 2 1 0 4 50 20
> wan failover show 2
wan2 Active Mode : Failover
Active when : Any of the selected WANs reached the Traffic Threshold
Traffic Download Threshold : 50 Kbps
Traffic Upload Threshold : 20 Kbps
>
```

Telnet Command: hspportal setup

This command is used to configure a profile (Hotspot Web Portal) with specified URL for accessing into or display a message when a wireless/LAN user connects to Internet through this router.

Syntax

hspportal setup -p <profile> <-l <lan>> <-s <ssid>> ...

hspportal setup -p <profile> -c

Syntax Description

Parameter	Description
<i>-p</i>	Indicate available profile to be configured. Number of profile: 1 / 2 / 3 / 4.
<i>-l</i>	Apply to LAN interfaces. E.g., apply LAN1 and LAN2: -l 1, 2.

-m	Select login mode. 0:skip 1:click 2:social 3:pin 4:social or pin
-f	Configure facebook login. 0: disable. 1: enable.
-g	Configure google login. 0: disable. 1: enable.
-h	Enable HTTPS redirection. 0: disable. 1: enable.
-v	Enable portal detection. 0: disable. 1: enable.
-i	Configure APP ID. For example, to configure facebook APP id, you can type: >hsportal -p 1 -f -i this_is_app_id Profile 1 set facebook login disabled ... [OK]
-k	Configure app key. For example, to configure google APP key, you can type: > hspanal -p 1 -g -i this_is_app_key Profile 1 set google login disabled ... [OK]
-r	Configure landing page mode. 0: fixed URL. 1: user request. 2: bulletin. E.g. > hspanal -p 1 -r 0 Profile 1 set landing page mode 0 ... [OK]
-e	Enable the specified profile.
-d	Disable the specified profile.
-c	Reset the specified profile. Number of profile: 1 / 2 / 3 / 4.
-o	Clear profiles for all clients.

Example

```
> hspanal setup -p 1 -c
Reset profile 1 ... [OK]
> hspanal setup -p 1 -r 0
Profile 1 set landing page mode 0 ... [OK]
> hspanal setup -p 2 -g 1 -k app_key_google
Profile 2 set google login enabled ... [OK]
Profile 2 set API KEY ... [OK]
>
```

Telnet Command: hspanal info

This command is used to enable /disable database, notification, specify object profile for information related to hotspot web portal users.

Syntax

hsportal info -e <0/1>

hsportal info -c

hsportal info -n <0/1>

hsportal info -a <0/1>

hsportal info -m <1~10>

hsportal info -s <1~10>

Syntax Description

Parameter	Description
-e <0/1>	Enable database to record information. 0 - disable 1 - enable
-c	Clear user information database.
-n <0/1>	Enable notification for user information. 0 - disable 1 - enable
-a <0/1>	Enable auto backup and start a new record for user information. 0 - disable 1 - enable
-m <1~10>	Set email notification object. [1~10]- Index number of object profile.
-s <1~10>	Set SMS notification object. [1~10]- Index number of object profile.

Example

```
> hsportal info -e 1
Enabled database to record information ... [OK]
> hsportal info -a 1
Enabled auto backup and start a new record for user information ... [OK]
>
```

Telnet Command: radius internal

This command allows you to configure detailed settings for internal RADIUS server and client.

Syntax

radius enable <0/1>

radius authport <port number>

radius set_auth_method <method idx>

radius client add <idx> -i <address> -m <mask> -p <prefix> -l <length> -s <secret>

radius client del <idx>

radius show

radius enable_dot1x <0/1>

radius set_dot1x_method -e <method_idx>

radius set_dot1x_method -d <method_idx>

Syntax Description

Parameter	Description
<i>enable</i> <0/1>	Enable (1) or disable (0) the RADIUS server.
<i>authport</i> <port number>	Configure the port number for authentication. Port number: Available range is from 0 to 65535. Default value is "1812".
<i>set_auth_method</i> <method_idx>	Specify which method will be used for authentication. Method idx: 0 and 1 0: Only PAP 1: PAP/CHAP/MS-CHAP/MS-CHAPv2
<i>client add</i> <idx> -i <address> -m <mask> -p <prefix> -l <length> -s <secret>	Specify a client to be authenticated by RADIUS server by typing required information as follows: -i <address>: client IPv4 address(domain) -m <mask>: client IPv4 mask -p <prefix>: client IPv6 prefix -l <length>: client IPv6 prefix length -s <secret>: shared secret ex: radius client add 1 -i 192.168.1.1 -m 255.255.255.0 -s 123
<i>client del</i> <idx>	<i>del</i> - Delete related settings for selected client. <i>idx</i> - Specify the index number of client profiles.
<i>show</i>	Display the status of RADIUS server.
<i>enable_dot1x</i> <0/1>	Enable (1) or disable (0) the 802.1X Authentication function of RADIUS Server. Default is disabled.
<i>set_dot1x_method -e</i> <method_idx>	Set a method for 802.1X authentication of RADIUS server. Method idx: 1 to 4. 1: EAP_PEAP/MSCHAPv2 2: EAP_TTLS/PAP 3: EAP_TTLS/MSCHAP 4: EAP_TTLS/MSCHAPv2
<i>set_dot1x_method -d</i> <method_idx>	Delete the method for 802.1X authentication of RADIUS server. Method idx: 1 to 4. 1: EAP_PEAP/MSCHAPv2 2: EAP_TTLS/PAP 3: EAP_TTLS/MSCHAP 4: EAP_TTLS/MSCHAPv2

Example

```
> radius client add 1 -i 192.168.1.1 -m 255.255.255.0 -s 123
  Set radius server client OK
>
```

Telnet Command: radius external

This command allows you to configure detailed settings for external RADIUS server.

Syntax

radius external <options>...

Syntax Description

Parameter	Description
<options>...	The available commands with parameters are listed below. [...] means that you can type in several parameters in one line.
-V	Show current setting.
-v <index>	Show current setting for certain RADIUS profile. <index>: Enter the index number of the profile.
-c "<index> <comment>"	Set the comment for certain RADIUS profile. <index>: Enter the index number of the profile. <comment>: Enter a string.
-f <index>	Set the selected profile as the default external RADIUS profile. <index>: Enter the index number of the profile.
-e "<index> <param>"	Enable or disable the external RADIUS profile. <index>: Enter the index number of the profile. <param>: 0 or 1. 0 is disable; 1 is enable. ex: -e "2 1" to enable the profile 2
-i "<index> <index2> <hostname/IP>"	Set the hostname or IP address for the selected RADIUS server profile. <index>: Enter the index number of the profile. <index2>: 0 or 1. 0 means the primary server; 1 means the secondary server. ex: -i "1 0 192.168.1.1" or -i "2 1 www.google.com"
-p "<index> <index2> <port_number>"	Set the destination port for the selected RADIUS server. <index>: Enter the index number of the profile. <index2>: 0 or 1. 0 means the primary server; 1 means the secondary server. <port_number>: 1 ~ 65535. ex : -p "1 1 1812"
-s "<index> <index2> <secret>"	Set the shared secret for the selected RADIUS server. <index>: Enter the index number of the profile. <index2>: 0 or 1. 0 means the primary server; 1 means the secondary server. <secret>: 1 ~ 65535. ex : -s "3 0 123"
-r "<index> <index2> <retry>"	Set the retry number for the selected RADIUS server. <index>: Enter the index number of the profile. <index2>: 0 or 1. 0 means the primary server; 1 means the secondary server. <retry>: 1 to 3. ex : -s "3 0 2"
-a "<index> <param>"	Enable or disable the accounting port for the selected RADIUS server. <index>: Enter the index number of the profile. <param>: 0 or 1. 0 is disable; 1 is enable.
-b "<index> <index2>	Set the accounting port for the selected RADIUS server.

<code><port_number>"</code>	<code><index></code>: Enter the index number of the profile. <code><index2></code>: 0 or 1. 0 means the primary server; 1 means the secondary server. <code><port_number></code>: 1 ~ 65535. ex : -b "1 0 1813"
<code>-d "<index> <index2> <port_number>"</code>	Disconnect the message port for the selected RADIUS server. <code><index></code>: Enter the index number of the profile. <code><index2></code>: 0 or 1. 0 means the primary server; 1 means the secondary server. <code><port_number></code>: 1 ~ 65535. ex : -d "1 1 3799"
<code>-u "<index> <index2> <update interval>"</code>	Set the accounting interim interval for the selected RADIUS server. <code><index></code>: Enter the index number of the profile. <code><index2></code>: 0 or 1. 0 means the primary server; 1 means the secondary server. <code><port_number></code>: 10 ~ 1440 (minutes) ex : -u "1 0 10"

Example

```
> radius external -i "1 0 192.168.1.1"
radius external -i "1 0 192.168.1.1"
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> radius external -V
Profile default enable comment
% 1      v
% 2
% 3
% 4
```

Telnet Command: local_8021x

The command is used to configure general settings for Local 802.1X server built in Vigor router.

Syntax

local_8021x enable `<0/1>`

local_8021x set_localdot1x_method -e `<method_idx>`

local_8021x set_localdot1x_method -d `<method_idx>`

local_8021x show

Syntax Description

Parameter	Description
<code>enable</code>	Enable or disable the configuration. 0: disable. 1: enable.
<code>-e <method_idx></code>	Set the authentication method. <code><method_idx></code>: 1 to 4, 1: EAP_PEAP/MSCHAPv2 2: EAP_TTLS/PAP 3: EAP_TTLS/MSCHAP 4: EAP_TTLS/MSCHAPv2

-d <method_idx>	Delete the authentication method. <method_idx>: 1 to 4, 1: EAP_PEAP/MSCHAPv2 2: EAP_TTLS/PAP 3: EAP_TTLS/MSCHAP 4: EAP_TTLS/MSCHAPv2
show	Display current settings of local 802.1x server.

Example

```
> local_8021x set_localdot1x_method -e 1
This setting will take effect after rebooting.
Please use "sys reboot" command to reboot the router.
> local_8021x show
DrayTek> local_8021x show
% Local 802.1X enable: disable
>
```

Telnet Command: wol

This command allows Administrator to set the white list of WAN IP addresses/Subnets, that the magic packet from these IP addresses/Subnets will be eligible to pass through NAT and wake up the LAN client. You also need to set NAT rule for LAN client.

Syntax

wol up <MAC Address>

wol fromWan <on/off/any>

wol fromWan_Setting <idx> <ip address> <mask>

Syntax Description

Parameter	Description
<i>MAC Address</i>	It means the MAC address of the host.
<i>IP address</i>	It means the LAN IP address of the host. If you want to wake up LAN host by using IP address, be sure that that IP address has been bound with the MAC address (IP BindMAC).
<i>on/off/any</i>	It means to enable or disable the function of WOL from WAN. on: enable off: disable any: It means any source IP address can pass through NAT and wake up the LAN client. This command will allow the user to choose whether WoL packets can be passed from the Internet to the LAN network from a specific WAN interface.
<i><idx> <ip address> <mask></i>	It means the index number (from 1 to 4). These commands will allow the user to configure the LAN clients that the user may wake up from the Internet through the use of the WoL packet. ip address - It means the WAN IP address. mask - It means the mask of the IP address.

Example

```
> wol fromWan on
% wol fromWan: on
> wol fromWan_Setting 1 192.168.1.45 255.255.255.0
% wol fromWan_Setting 1 192.168.1.45 255.255.255.0
>
```

Telnet Command: user

The command is used to create new user account profiles.

Syntax

user set <-a|-b|-c|-d|-e|-l|-o|-q|-r|-s|-u>

user edit <PROFILE_IDX>

<-a|-d|-e|-f|-i|-o|-m|-n|-p|-q|-r|-s|-t|-u|-v|-w|-x|-A|-H|-T|-P|-I|-L|-D>

user account <USER_NAME><-t|-d|-q|-r|-w>

user setdefault

Syntax Description

Parameter	Description
<i>set</i>	It means to configure general setup for the user management.
<i>edit</i>	It means to modify the selected user profile.
<i>account</i>	It means to set time and data quota for specified user account.
<i>setdefault</i>	It means to reset to factory default settings.
User Set	
<i>-a</i> <Profile idx> <User name><IP_Address>	It means to pass an IP Address. Profile idx- type the index number of the selected profile. User name- type the user name that you want it to pass. IP_Address- type the IP address that you want it to pass.
<i>-b</i> <user name> <i>-b ip</i> <ip address>	Block specifies user or IP address. <i>user name</i> – type the user name that you want to block. <i>ip address</i> – type the IP address that you want to block.
<i>-c</i> <user name> <i>-c all</i>	Clear the user record. <i>user name</i> – type the user name that you want to get clear corresponding record. <i>all</i> – all of the records will be removed.
<i>-d</i>	Enable the User management in Rule-Based mode.
<i>-e</i>	Enable the User management in User-Based mode.
<i>-l all</i> <i>-l user</i> <i>-l ip</i>	Show online user. <i>all</i> – all of the users will be displayed on the screen. <i>user name</i> – type the user name that you want to view on the screen. <i>ip</i> – type the IP address that you want to view on the screen.
<i>-o</i>	It means to show user account information. e.g., -o
<i>-q</i>	It means to trigger the alert tool to do authentication.
<i>-r</i> <user name all>	Remove the user record. <i>user name</i> – type the name of the user profile.

	<i>all</i> – all of the user profile settings will be removed.
<i>-s</i>	It means to set login service. 0:HTTPS 1:HTTP e.g., <i>-s 1</i>
<i>-u user <user name></i> <i>-u ip <ip address></i>	Unblock specifies user or IP address. <i>user name</i> – type the user name that you want to unblock. <i>ip address</i> – type the IP address that you want to unblock.
User edit	
<i>PROFILE_IDX</i>	Type the index number of the profile that you want to edit.
<i>-a <0/1></i>	Enable(1) or disable(0) the internal RADIUS.
<i>-d</i>	Disable User profile function.
<i>-e</i>	Enable User profile function.
<i>-f <0/1></i>	Enable(1) or disable(0) the local 802.1x user.
<i>-i <0-255></i>	It means to set idle time (from 0 to 255, 0 means unlimited). e.g., <i>-i 60</i>
<i>-o <0-65535></i>	It means to set auto-logout (from 0 to 65535, 0 means unlimited).
<i>-m <0-2000></i>	It means to set the maximum (from 0 to 2000) login user number. e.g., <i>-m 200</i>
<i>-n <param></i>	It means to set a user name for a profile. Param: Enter a string, e.g., <i>-n forttest</i> .
<i>-p <param></i>	It means to configure user password. Param: Enter a string, e.g., <i>-p 60forttest</i> .
<i>-q <param></i>	It means to set time quota (0-65535) of the user profile. Param: Enter a value, e.g., <i>-q 200</i> .
<i>-r <param></i>	It means to set data quota. Param: Enter a value, e.g., <i>-r 1000</i> .
<i>-s</i> <i><sch_idx1,sch_idx2,sch_idx3</i> <i>, and sch_idx4></i>	It means to set schedule index. Available settings are" sch_idx1,sch_idx2,sch_idx3, and sch_idx4.
<i>-t <0/1></i>	It means to enable /disable time quota limitation for user profile 0:Disable 1:Enable
<i>-u <0/1></i>	It means to enable /disable data quota limitation for user profile 0:Disable 1:Enable
<i>-v</i>	It means to view user profile(s).
<i>-w <MB/GB></i>	It means to specify the data quota unit (MB/GB). e.g., <i>-w MB</i>
<i>-x <0-3></i>	It means to set external server authentication 0: None 1: LDAP 2: Radius 3: TACAS e.g., <i>-x 2</i>
<i>-l <0-3></i>	It means to set log type. 0:None

	1:Login 2:Event 3:All
-P <0/1>	It means to enable /disable pop browser tracking window for user profile 0:Disable 1:Enable
-T <0/1>	It means to enable /disable authentication by telnet. 0:Disable 1:Enable
-H <0/1>	It means to enable /disable authentication by web page. 0:Disable 1:Enable
-A <0/1>	It means to enable /disable authentication by alert tool. 0:Disable 1:Enable
-L <index>	It means to set active directory / LDAP profiles. Index: Specify the index number (profile_idx1 to profile_idx8) of the profile.
-D	It means to list all active directory / LDAP profiles.
-O <0/1>	It means to reset the quota automatically. 0:Disable 1:Enable
-Q <param>	It means to set the default time quota. param: Enter a number (1 to 65535).
-R <param>	It means to set the default data quota. param: Enter a number (1 to 65535).
-M <param>	It means to set the default quota type. 0: when login permission schedule expired. 1: at the start time of schedule.
I <param>	It means to specify the default quota schedule index to perform the job at the start time.
-S	It means to display the reset default quota type and the schedule index.
<i>User account</i>	
USER_NAME	It means to type a name of the user account.
-d <0/1>	It means to enable /disable data quota limitation for user account. 0:Disable 1:Enable
-q	It means to set account time quota. e.g., -q 200
-r	It means to set account data quota. e.g., -r 1000
-t <0/1>	It means to enable /disable time quota limitation for user account. 0:Disable 1:Enable
-w <MB/GB>	It means to set data quota unit (MB/GB).

Example

```
> user account admin -d 1  
Enable the [admin] data quota limited
```

Telnet Command: appqos

The command is used to configure QoS for APP.

Syntax

appqos view

appqos enable <0/1>

appqos traceable <-v | -e AP_INDEX CLASS | -d AP_INDEX>

appqos untraceable <-v | -e AP_INDEX CLASS | -d AP_INDEX>

Syntax Description

Parameter	Description
<i>view</i>	It means to display current status of APP QoS.
<i>enable</i> <0/1>	It means to enable or disable the function of APP QoS.
<i>traceable/ untraceable</i>	The APPs are divided into traceable and untraceable based on their properties.
<i>-v</i>	It means to view the content of all traceable APs. Use “appqos traceable -v” to display all of the traceable APS with speficed index number. Use “appqos untraceable -v” to display all of the untraceable APS with speficed index number.
<i>-e</i>	It menas to enable QoS for application(s) and assign QoS class.
<i>AP_INDEX</i>	Each index number represents one application. Index number: 50, 51, 52, 53, 54, 58, 60, 62, 63, 64, 65, 66, 68 are used for 13 traceabel APPs. Index number: 0~49, 55~59, 61, 67, 69, and 70~123 are used for 125 untraceable AP.
<i>CLASS</i>	Specifies the QoS class of the application, from 1 to 4 1:Class 1, 2:Class 2, 3:Class 3, 4:Other Class
<i>-d</i>	It means to disable QoS for application(s).

Example

```
> appqos enable 1  
  
APP QoS set to Enable.  
> appqos traceable -e 68 2  
  
TELNET: ENABLED, QoS Class 2.
```

Telnet Command: nand bad /nand usage

“NAND usage” is used to display NAND Flash usage; “nand bad” is used to display NAND Flash bad blocks.

Syntax

nand bad

nand usage

Example

```
> nand usage
Show NAND Flash Usage:
Partition      Total          Used           Available      Use%
cfg            4194304         7920           4186384        0%
bin_web        33554432        11869493       21684939       35%
cfg-bak        4194304         7920           4186384        0%
bin_web-bak    33554432        11869493       21684939       35%

> nand bad
Show NAND Flash Bad Blocks:
Block  Address          Partition
1020   0x07f80000       unused
1021   0x07fa0000       unused
1022   0x07fc0000       unused
1023   0x07fe0000       unused
```

Telnet Command: apm show /clear/discover/query

The apm command(s) is use to display, remove, discover or query the information of VigorAP registered to Vigor2962.

Syntax

apm enable

apm disable

apm show

apm clear

apm discover

apm query

Syntax Description

Parameter	Description
<i>enable</i>	It means to enable APM function.
<i>disable</i>	It means to disable APM function.
<i>show</i>	It displays current information of APM profile.

<i>clear</i>	It is used to remove all of the APM profile.
<i>discover</i>	It is used to search VigorAP on LAN.
<i>query</i>	It is used to query any VigorAP which has been registered to APM (Central AP Management) in Vigor2962. Information related to the registered AP will be send back to Vigor2962 for updating the web page of Central AP Management.

Example

```
> apm clear
Clear all clients ... done
```

Telnet Command: apm profile

This command allows to configure wireless profiles to be used in Central AP Management.

Syntax

apm profile clone *<from index><to index><new name>*

apm profile del *<index>*

apm profile reset

apm profile summary

apm profile show *<profile index>*

apm profile apply *<profile index> <client index1 index2 .. index5>>*

Syntax Description

Parameter	Description
<i>clone</i>	It is used to copy the same parameters settings from one profile to another APM profile.
<i>del</i>	It is used to delete a specified APM profile. The default (index #1) should not be deleted.
<i>reset</i>	It is used to reset to factory settings for WLAN profile.
<i>summary</i>	It is used to list all of the APM profiles with required information.
<i>show</i>	It is used to display specified APM profile.
<i>apply</i>	It is used to apply the selected APM profile onto specified VigorAP.
<i>from index</i>	Type an index number in this field. It is the original APM profile to be cloned to other APM profile.
<i>to index</i>	Type an index number in this file. It is the target profile which will clone the parameters settings from an existed APM profile.
<i>new name</i>	Type a name for a new APM profile.
<i>profile index</i>	Enter the index number of existed profile.
<i>client index1/2/3/4/5</i>	It is useful for applying the selected APM profile to the specified VigorAP.

Example

```
> apm profile clone 1 2 forcarrie
(Done)

> apm profile summary
# Name          SSID          Security    ACL    RateCtrl(U/D)
```

0	Default	DrayTek-LAN-A	WPA+WPA2/PSK	x	- / -

Telnet Command: apm cache

This command is used to display or remove the information of registered VigorAP, including MAC address, name, and authentication. Up to 30 entries of registered information can be stored and displayed.

Syntax

apm cache show

apm cache clear

Syntax Description

Parameter	Description
<i>show</i>	It means to display the information related to VigorAP registered Vigor2962.
<i>clear</i>	It means to remove the information related to VigorAP registered Vigor2962.

Example

> apm cache show		
MAC	Name	Auth

>		

Telnet Command: apm lbcfg

This command allows to set parameters related to AP management control.

Syntax

apm lbcfg set <value>

apm lbcfg show

Syntax Description

Parameter	Description
<i>set</i>	It means to set the load balance configuration file for APM.
<i>Show</i>	It shows the configuration value.
<i><value></i>	You need to type 10 numbers in this field. Each number represents different setting value. [1] - The first number means the load balance function. Type

	1 - enable load balance, 0 - disable load balance. [2] - The second number means the station limit function. Type 1 -enable station limit, 0 - disable station limit. [3] - The third number means the traffic limit function. Type 1 - enable traffic limit, 0 - disable traffic limit. [4] - The forth number means the limit num of station. Available range is 3~64. [5] - The fifth number means the upload limit function. Type 1 - enable upload limit, 0 - disable upload limit. [6] - The sixth number means the download limit function. Type 1 - enable download limit, 0 - disable download limit. [7] - The seventh number means disassociation by idle time. Type 1 - enable disassociation, 0 - disable disassociation. [8] - The eighth number means to enable or disable disassociation by signal strength. Type 1 - enable disassociation, 0 - disable disassociation. [9] - The ninth number means to determine the unit of traffic limit (for upload) 1 - Mbps 0 - kbps [10] - The tenth number means to determine the unit of traffic limit (for download) 1 - Mbps 0 - kbps [11] - This number means to set RSSI threshold (-200 to -50 dbm).

Example

```

> apm lbcfg show
apm LoadBalance Config :
1. Enable LoadBalance : 0
2. Enable station limit : 0
3. Enable traffic limit : 0
4. limit Number : 64
5. Upload limit : 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength : 0
9. Traffic limit unit (upload) : 0
10.Traffic limit unit (download) : 0
11.RSSI threshold : 0
flag : 0
> apm lbcfg set [1][1][0][15][0][0][0][0][1][1][-30]
> apm lbcfg show
apm LoadBalance Config :

```

```

1. Enable LoadBalance : 1
2. Enable station limit : 1
3. Enable traffic limit : 0
4. limit Number : 15
5. Upload limit : 0
6. Download limit : 0
7. Enable disassociation by idle time : 0
8. Enable disassociation by Signal strength : 0
9. Traffic limit unit (upload) : 1
10. Traffic limit unit (download) : 1
11. RSSI threshold : -30
flag : 49

```

Telnet Command: apm apsyslog

This command is used to display the AP syslog data coming from VigorAP.

Syntax

apm apsyslog <AP_Index>

Syntax Description

Parameter	Description
AP_Index	Specify the index number which represents VigorAP.

Example

```

> apm apsyslog 1
8d 02:46:09 syslog: [APM] Send Rogue AP Detection data.
8d 02:53:04 syslog: [APM] Run AP Detection / Discovery.
8d 02:56:09 syslog: [APM] Send Rogue AP Detection data.
8d 03:00:42 kernel: 60:fa:cd:55:f5:ea had disassociated.
8d 03:03:12 syslog: [APM] Run AP Detection / Discovery.
8d 03:06:09 syslog: [APM] Send Rogue AP Detection data.
8d 03:13:21 syslog: [APM] Run AP Detection / Discovery.
8d 03:16:10 syslog: [APM] Send Rogue AP Detection data.
8d 03:16:41 kernel: 60:fa:cd:55:f5:ea had associated successfully
8d 03:16:55 kernel: 60:fa:cd:55:f5:ea had disassociated.

```

Telnet Command: apm syslog

This command is used to display related syslog data from central AP management.

Syntax

apm syslog

Example

```

> apm syslog
"2015-11-04 12:24:21", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP"
2015-11-04 12:24:56", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP Success"
2015-11-04 12:34:21", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection
Data from AP"
2015-11-04 12:34:57", "[APM] [VigorAP900_01daa902080] Get Rogue AP Detection

```

Telnet Command: apm stanum

This command is used to display the total number of the wireless clients, no matter what mode of wireless connection (2.4G WLAN or 5G WLAN) used by wireless clients to access into Internet through VigorAP.

Syntax

apm stanum <AP_Index>

Syntax Description

Parameter	Description
AP_Index	Specify the index number which represents VigorAP.

Example

```
> apm stanum

% Show the APM AP Station Number data.
% apm stanum AP_Index.
%   ex : apm stanum 1
%       Idx  Nearby(2.4/5G)  Conn(2.4/5G)
%       1    2    5          0    0
%       2    2    5          1    0
%       3    2    5          1    0
```

Telnet Command: ha set

This command can be used to configure HA settings for Vigor routers.

Syntax

ha set [-<command> <parameter>] ...]

Syntax Description

Parameter	Description
[<command> <parameter>] ...]	The available commands with parameters are listed below. [...] means that you can Enter several parameters in one line.
-e <1/0>	1: Enable the function of High Availability (HA). 0: Disable the function of High Availability (HA).
-l <1/0>	1: Enable the function of recording the operation record of HA in Syslog. 0: Disable the function of recording the operation record of HA in Syslog.
-M <1/0>	Specify the Redundancy Method for HA. 1: Active-Standby 0: Hot-Standby
-v <1-255>	Specify the group ID (VHID) 1- 255: Setting range.
-R	Set HA settings to Factory Default.
-p <1-30>	Specify the Priority ID. 1-30: Setting range.
-k <key>	Specify the Authentication Key.

	Key: Max. 31 Characters.
-u <1/0>	Enable or disable the function of Update DDNS. 1: Enable. When a router changes HA status to primary, it will update DDNS automatically. 0: Disable.
-m <interface>	Specify the management interface. Interface: LAN1 ~ LAN20
-s	It means to get the newest status of other router (except the local router).
-y	It means sync local config to other router. Primary can executes this command. Secondary can not execute this command.
-c <1/0>	Enable or disable the function of Config Sync. 1: Enable. 0: Disable.
-C <config type> <1/0>	Exclude the following settings from config sync. Config type: 1 (WAN settings)
-I -[M H D] <interval>	Set the Config Sync Interval for HA. Minimum interval is 15 minutes. -M: Minute. Setting range is 0/15/30/45. (e.g., ha set -I -M 30) -H: Hour. Setting range is from 0 to 23. (e.g., ha set -I -H 12) -D: Day. Setting range is from 0 to 30. (e.g., ha set -I -D 15)
-h -<4/6><Subnet> <Virtual IP>	Enable and set virtual IP to the subnet. 4: IPv4; 6: IPv6. Subnet: LAN1 to LAN20 Virtual IP: The type format shall be "xxx.xxx.xxx.xxx". (e.g, 192.168.1.0) For example, to enable a virtual IP to the subnet, simply type: ha set -h LAN1 192.168.1.5
-d -<4/6><Subnet>	Disable a virtual IP to the subnet. 4: IPv4; 6: IPv6. Subnet: LAN1 to LAN20. For example, to disable a virtual IP to the subnet, just type: ha set -h LAN1
-o <1/0>	Run DARP protocol on IPv4 or IPv6. 0: IPv4 1: IPv6

Example

```
> ha set -h -4 LAN1 192.168.1.1
% Enable IPv4 Virtual IP on LAN1
% Virtual IP can not be same as router IP (192.168.1.1)!!!
>
```

Telnet Command: ha show

This command can be used to show the *settings information* about config sync and general setup.

Syntax

ha show -c

ha show -g

Syntax Description

Parameter	Description
-c	Show the settings of config sync.
-g	Show the settings of general setup.

Example

```
> ha show -g
% High Availability      : Disable
% Redundancy Method    : Active-Standby
% Group ID             : 1
% Priority ID          : 10
% Update DDNS          : Disable
% Protocol             : IPv4

```

Telnet Command: ha status

This command is used to display *HA status information*.

Syntax

ha status -a <Detail Level>

ha status -m <Detail Level>

Syntax Description

Parameter	Description
-a	Show the status for all of the routers in HA group.
-m	Show the status of local router only.
Detail Level	0: Important status. 1: Important status, plus some information. 2: Show settings

Example

```

> ha status -m 2
%   [Local Router] DrayTek
%   IP          : 192.168.1.1 (FE80::1649:BCFF:FE0D:1F48)
%   Status      : !
%   High Availability : ! Disable
%   Redundancy Method : Active-Standby
%   Group ID     : 1
%   Priority ID   : 10
%   Update DDNS   : Disable
%   Protocol      : IPv4
%   Management Interface : LAN1
%   Authentication Key : draytek
%   Virtual IP: (Max. 51 Virtual IPs)
%   ON          LAN1 192.168.1.2
%   ON          LAN22 100.0.0.0
%   Virtual IPv6: (Max. 51 Virtual IPv6s)
%   ON          LAN1 FE80::200:5EFF:FE00:101
%   ON          LAN2 FE80::200:5EFF:FE00:101
%   ON          LAN3 FE80::200:5EFF:FE00:101
%   ON          LAN4 FE80::200:5EFF:FE00:101
%   ON          LAN5 FE80::200:5EFF:FE00:101
%   ON          LAN6 FE80::200:5EFF:FE00:101
%   ON          LAN7 FE80::200:5EFF:FE00:101
%   ON          LAN8 FE80::200:5EFF:FE00:101
%   ON          LAN9 FE80::200:5EFF:FE00:101
%   ON          LAN10 FE80::200:5EFF:FE00:101
%   ON          LAN11 FE80::200:5EFF:FE00:101
%   ON          LAN12 FE80::200:5EFF:FE00:101
%   ON          LAN13 FE80::200:5EFF:FE00:101
%   ON          LAN14 FE80::200:5EFF:FE00:101
%   ON          LAN15 FE80::200:5EFF:FE00:101
%   ON          LAN16 FE80::200:5EFF:FE00:101
%   ON          LAN17 FE80::200:5EFF:FE00:101
%   ON          LAN18 FE80::200:5EFF:FE00:101

```

```
%    ON    LAN19 FE80::200:5EFF:FE00:101
%    ON    LAN20 FE80::200:5EFF:FE00:101
%    ON
>
```

Telnet Command: swm show

This command is used to display general setting of of VigorSwitch which connecting to Vigor router in LAN.

Syntax

swm show <LAN_port>

Syntax Description

Parameter	Description
LAN_port	Specify the LAN port number (1 to 6).

Example

```
swm show 3

** If you want to display SWM debug log : "swm show debug log"
** Enable/Disable SWM console debug log : "swm show console log en/dis"
** Enable/Disable SWM syslog debug log : "swm show syslog log en/dis"

** If you connected a VigorSwitch but does not display here.
** Please check the LLDP is enabled and VLAN ID is matched on VigorSwitch.

(Total 1 Switch)

Telnet Command: swm get

This command is used to **get** configuration information of VigorSwitch which connecting to Vigor router in LAN. Before using such command, make sure VigorSwitch has been managed under Vigor router (refer to Telnet Command: swm profile for adding a VigorSwitch device onto Vigor router).

Syntax

swm get <MAC>

Syntax Description

Parameter	Description
MAC	Enter the MAC address (e.g., 001DAA0CCD08) of the VigorSwitch.

Example

```
> swm get 001DAA0CCD08
Start get cfg from 001daa0ccd08 external switch

Please wait a few seconds...

Result: [OK].
>
```

Telnet Command: swm post

This command is used to transfer switch configuration to VigorSwitch which connecting to Vigor router in LAN.

Syntax

swm post <MAC>

Syntax Description

Parameter	Description
MAC	Enter the MAC address (e.g., 001DAA0CCD08) of the VigorSwitch.

Example

```
> swm post 001DAA0CCD08
Start post cfg to 001daa0ccd08 external switch with current settings.
Please wait a few seconds...
Result: [OK].
>
```

Telnet Command: swm auth

This command is used to display or remove the authentication record for external switch.

Syntax

swm auth <show/clear>

Syntax Description

Parameter	Description
<i>show</i>	Display recorded external switch MAC address list.
<i>clear</i>	Clear specific index of authentication record table. Index range: (1 - 30)

Example

```
> swm auth show
===== SWM Auth Records List=====
Index Model   Mac
-----
=====
> swm auth clear 1

Clear index (1) swm auth record OK
```

Telnet Command: swm enable / disable

This command is used to enable / disable the external device.

Example

```
> swm enable
```

Telnet Command: swm group

This command is used to add, edit or display the switch management group.

Syntax

swm group set <IDX> <NAME> <1> <PASSWD>

swm group set <IDX> <NAME> <0>

swm group show

swm group add <IDX> <MAC>

swm group delete <IDX> <MAC>

Syntax Description

Parameter	Description
<i>set</i> <IDX> <NAME> <1> <PASSWD>	It means to set group name and group password. <IDX>: Enter the index number (1 to 10) of the group. <NAME>: Enter the name of the group. <1>: It means the password flag. <PASSWD>: Enter a string as the password.
<i>show</i>	It means to display switch group status.
<i>add</i> <IDX> <MAC>	It means to add a switch into the group as a member switch. <IDX>: Enter the index number (1 to 10) of the group. <MAC>: Enter the MAC address of VigorSwitch.
<i>delete</i> <IDX> <MAC>	It means to delete a switch from the group. <IDX>: Enter the index number (1 to 10) of the group. <MAC>: Enter the MAC address of VigorSwitch.

Example

```
> swm group set 10 pease 1 jpsword
> swm group show
Index      Group Name      Passwd Flag      Member Switch
-----
1          pease          1                G2280(192.168.1.10),
2                                0
3                                0
4                                0
5                                0
6                                0
7                                0
8                                0
9                                0
10         pease          1

Name                IP Address        MAC
-----
G2280                192.168.1.10      001daa0ccd08
```

Telnet Command: swm profile

This command is used to add, edit or display the switch management profile.

Syntax

swm profile *add/delete* <MAC>

swm profile *show*

swm profile *enable_all/disable_all* <MAC>

Syntax Description

Parameter	Description
<i>add/delete</i> <MAC>	It means to add or delete a member switch from the profile. <MAC>: Enter the MAC address of the switch.
<i>show</i>	It means to display switch profile.
<i>enable_all/disable_all</i> <MAC>	It means to enable or disable all LAN ports of the specified switch managed by Vigor router. <MAC>: Enter the MAC address of the member switch.

Example

```
> swm profile show
Name                IP Address        MAC                Model   Group
-----
G2280                192.168.1.10      001daa0ccd08      G2280   peace,peace,

IP Address          MAC                Model
-----

>
```

Telnet Command: swm detail

This command is used to configure general settings (e.g., switch name, password) and port settings for VigorSwitch.

Syntax

swm detail *comment* <MAC> <COMMENT>

swm detail *name* <MAC> <NAME>

swm detail *passwd* <MAC> <PASSWD>

swm detail *config* <MAC> <config>

swm detail *show*

swm detail *port show* <MAC>

swm detail *port* <MAC> <PORT> <FLAG> <SCHED1> <SCHED2> <DESCRIPTION>

swm detail *rate* <MAC> <PORT> <i/e> <e/d>

swm detail *rate* <MAC> <PORT> <i/e> <ratelimit>

Syntax Description

Parameter	Description
<i>comment</i> <MAC> <COMMENT>	It means to set a comment for VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified. <COMMENT>: Add an additional explanation for the switch.
<i>name</i> <MAC> <NAME>	It means to set a name for VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified. <NAME>: Enter the name of VigorSwitch.
<i>passwd</i> <MAC> <PASSWD>	It means to set a login password for VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified. <NAME>: Enter the login password of VigorSwitch.
<i>config</i> <MAC> <config>	It means to apply the configuration of VigorSwitch B to other Vigorswitch A. <MAC>: Enter the MAC address of the VigorSwitch A to be modified. <config>: Enter the index number of the profile set in VigorSwitch B.
<i>show</i>	It means to display comment, MAC and connection status of the switch.
<i>port show</i> <MAC>	It means to display a list of LAN ports of the VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified.
<i>port</i> <MAC> <PORT> <FLAG> <SCHED1> <SCHED2> <DESCRIPTION>	It means to set a description and schedule profile for each port of VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified. <PORT>: Enter the index number (e.g., 1 to 28) of the VigorSwitch LAN port. The number of LAN ports will vary according to the Switch to be modified. <SCHED1> <SCHED2>: Determine and type two index numbers of the schedule profiles you want. <DESCRIPTION>: Enter a desription for each port of VigorSwitch.
<i>rate</i> <MAC> <PORT> <i/e> <e/d>	It means to enable / disable the rate limit for each port of VigorSwitch. <MAC>: Enter the MAC address of the VigorSwitch to be modified. <PORT>: Enter the index number (e.g., 1 to 28) of the VigorSwitch LAN port. The number of LAN ports will vary according to the Switch to be modified. <i/e>: "i" means Ingress Rate; "e" means Egress Rate. <e/d> "e" means enable; "d" means disable the setting.
<i>rate</i> <MAC> <PORT> <i/e> <ratelimit>	It means to modify the rate limit for each port of VigorSwitch.

	<MAC>: Enter the MAC address of the VigorSwitch to be modified. <PORT>: Enter the index number (e.g., 1 to 28) of the VigorSwitch LAN port. The number of LAN ports will vary according to the Switch to be modified. <i/e>: "i" means Ingress Rate; "e" means Egress Rate. <ratelimit>: Enter a value.

Example

```

> swm detail rate 001DAA0CCD08 1 i 5000
> swm detail comment 001DAA0CCD08 availablefor2floor
> swm detail rate 001DAA0CCD08 1 i 5000
> swm detail show

```

Telnet Command: swm maintain

This command is used to reboot or reset the switch to factory default setting.

Syntax

swm maintain *reboot* <MAC>

swm maintain *reset* <MAC>

swm maintain *show*

Syntax Description

Parameter	Description
<i>reboot</i> <MAC>	It means to reboot VigorSwitch with current settings. <MAC>: Enter the MAC address of the VigorSwitch to be modified.
<i>reset</i> <MAC>	It means to reset VigorSwitch with factory default settings. <MAC>: Enter the MAC address of the VigorSwitch to be modified.
<i>show</i>	It means to display comment, MAC and connection status of the switch.

Example

```

> swm maintain show
Name          IP Address      MAC          Model
-----
G2280          192.168.1.10    001daa0ccd08 G2280
> swm maintain reset 001daa0ccd08
Preparing to reset.
Please wait for few minutes and do not turn off power.

```

Telnet Command: swm search

This command is used to search Vigor Switch by MAC / IP address / specific description and display information.

Syntax

swm search *mac* <MAC>

swm search *ip* <IP>

swm search *description* <Input>

Syntax Description

Parameter	Description
<i>Mac</i> <MAC>	<MAC>: Enter the MAC address of the VigorSwitch to be searched.
<i>ip</i> <IP>	<IP>: Enter the IP address of the VigorSwitch to be searched.
<i>description</i> <input>	<input>: Enter the model name of the VigorSwitch to be searched.

Example

> swm search mac 001daa0ccd08				
Type	IP Address	MAC	Description / Name	Lan Port
UpLink	Port	Level	Port	

Switch	192.168.1.10	00:1D:AA:0C:CD:08	G2280	P3
Vigor Router	0	3		
>				

Telnet Command: swm db

This command is used to enable/disable database to record switch management information.

Syntax

swm db *ctl en/dis*

swm db *ctl show*

swm db *alert notify* <N/S>

swm db *alert action* <S/B>

swm db *alert sms*<IDX>

swm db *alert mail* <IDX>

Syntax Description

Parameter	Description
<i>ctl en/dis</i>	It means to enable or disable the function of displaying database control status. en: Enable the function. dis: Disable the function.
<i>ctl show</i>	It means to show the the database control status.
<i>alert notify</i> <N/S>	It means to set alert notification (N or S) condition when storage exceeded. N: Don't send notification. S: Send notification.
<i>alert action</i> <S/B>	It means to set the alert action (S or B) condition when storage exceeded.

	S: Stop recording urser information. B: Backup and clean up all user info, and start a new record.
<i>alert sms <IDX></i>	It means to set SMS object which will get the information from Vigor router if something wrong with VigorSwitch. <IDX>: Enter the index number of the mail object.
<i>alert mail <IDX></i>	It means to set mail object which will get the information from Vigor router if something wrong with VigorSwitch. <IDX>: Enter the index number of the mail object.

Example

```
> swm db ctl en
Enable database to recoard SWM information.
>
```

Telnet Command: swm alert

This command is used to define the name of alert, level of alert (in color), and determine to record the data in the database, or send a notification message to the user based on the level.

Syntax

```
swm alert enable/disable
swm alert show
swm alert en/dis <Idx>
swm alert set <Idx> log <e/d>
swm alert set <Idx> name <name>
swm alert set <Idx> color <O/R/N>
swm alert set <Idx> notif <e/d>
swm alert set <Idx> obj <object idx> <object value>
swm alert display
swm alert en/dis <sw/port> <mac>
swm alert sw show <mac>
swm alert set sw <mac> <incident idx> <level idx>
swm alert port show <mac>
swm alert set port <mac> <port num><incident idx> <level idx>
```

Syntax Description

Parameter	Description
<i>enable/disable</i>	It means to enable/disable Alert mechanism. enable: Enable the mechanism. disable: Disable the mechanism.
<i>show</i>	It means to display a list of all alert setup.
<i>en/dis <Idx></i>	It means to enable / disable the Alert Action settings. en: Enable the settings. dis: Disabel the settings. <Idx>: Enter the index number (1 to 8) of the alert action item.
<i>set <Idx> log <e/d></i>	It means to enable / disable the function of creating log of alert. e: Enable the settings. d: Disabel the settings. <Idx>: Enter the index number (1 to 8) of the alert action item. Note that No Log for index 1; and log for index 2 is enabled in

	default.
<i>set <idx> name <name></i>	It means to set level name of each alert. <idx>: Enter the index number (1 to 8) of the alert action item. <name>: Enter a short description of the alert.
<i>set <idx> color <O/R/N></i>	It means to define the color for each level of alert. The color of index 1 is No color and unable to be changed. <idx>: Enter the index number (2 to 8) of the alert action item. <O/R/N>: "O" means orange; "R" means red; "N" means no color.
<i>set <idx> notif <e/d></i>	It means to enable or disable the function of sending notification to specified phone number via SMS. <idx>: Enter the index number (3 to 8) of the alert action item. e: Enable the settings. d: Disable the settings.
<i>set <idx> obj <object idx> <object value></i>	It means to specify SMS/Email service object(s) for the alert item. Each alert can be set with up to four objects. <idx>: Enter the index number (3 to 8) of the alert action item. <object idx>: Enter the queue number (1 to 4) for specifying an object profile. <object value>: Enter the index number (1 to 10) of the SMS/Email service object profile.
<i>display</i>	It means to display all switches with port alert state.
<i>en/dis <sw/port> <mac></i>	It means to enable or disable the Switch Alert /Port Alert action. en: Enable the function. dis: Disable the function. <sw/port>: "sw" means Switch Alert; "port" means Port Alert. <mac>: Enter the MAC address of the VigorSwitch.
<i>sw show <mac></i>	It means to display incident and alert type of the VigorSwitch. <mac>: Enter the MAC address of the VigorSwitch.
<i>set sw <mac> <incident idx> <level idx></i>	It means to set incident and alert type of the VigorSwitch. <mac>: Enter the MAC address of the VigorSwitch. <incident idx>: Range 1 - ??? <level idx>: 1 - 8
<i>port show <mac></i>	Display Port Incident Alert <mac>: Enter the MAC address of the VigorSwitch.
<i>set port <mac> <port num> <incident idx> <level idx></i>	Set Port Incident Alert <mac>: Enter the MAC address of the VigorSwitch. <port num>: Range 1 - ??? <incident idx>: Range 1 - ??? <level idx>: 1 - 8

Example

<pre>> swm alert set 2 color N > swm alert show</pre>						
Idx	En/Dis	Level	Color	Create	Log	Send Notification(1-4)
1	En	No Alert	No Color	Disable	Disable	0 , 0 , 0 , 0
2	En	Minor Alert	No Color	Enable	Disable	0 , 0 , 0 , 0
3	En	Moderate Alert	Orange	Enable	Disable	0 , 0 , 0 , 0
4	En	Major Alert	Red	Enable	Disable	0 , 0 , 0 , 0
5	Dis		No Color	Disable	Disable	0 , 0 , 0 , 0
6	Dis		No Color	Disable	Disable	0 , 0 , 0 , 0
7	Dis		No Color	Disable	Disable	0 , 0 , 0 , 0

```

8      Dis                               No Color   Disable   Disable   0 , 0 , 0 , 0
>
>

```

Telnet Command: swm log

This command is used to display switch managent log.

Syntax

swm log *show filter*

swm log *show day*

swm log *show week*

swm log *set level <idx> on/off*

swm log *set type <idx> on/off*

swm log *set switch <mac> on/off*

Syntax Description

Parameter	Description
<i>show filter</i>	It means to display the log filter setup.
<i>show day</i>	It means to display the quantity of day log.
<i>show week</i>	It means to display the quantity of week log.
<i>set level <idx> on/off</i>	It means to turn on or turn off the alert level. <idx>: 1 to 8. on/off: Set the status (on or off) of the alert.
<i>set type <idx> on/off</i>	It means to turn on or turn off the port alert/switch alert. <idx>: 1 to 2. "1" means Port Alert; "2" means Switch Alert. on/off: Set the status (on or off) of the alert.
<i>set switch <mac> on/off</i>	It means to set Switch Filter: <mac>: Enter the MAC address of the VigorSwitch. on/off: Set the status (on or off) of the alert.

Example

```

> swm log show filter
Index Status Level           En/Dis
-----
1   off   No Alert           En
2   off   Minor Alert         En
3   off   Moderate Alert        En
4   off   Major Alert           En
5   off                               Dis
6   off                               Dis
7   off                               Dis
8   off                               Dis

Index Status Type
-----
1   on    Port Alert
2   off   Switch Alert

Index Status Switch Name      Model  Mac Address

```

```

-----
1    on    G2280          G2280  001daa0ccd08
> swm log set level 8 on
>

```

Telnet Command: swm snmp

This command is used to display switch information via SNMP query.

Syntax

swm snmp *sys* <MAC>

swm snmp *iftbl* <MAC> <port_num>

swm snmp *poe* <MAC>

swm snmp *trpcom show* <MAC>

swm snmp *trpcom set* <MAC> <name>

Syntax Description

Parameter	Description
<i>sys</i> <MAC>	It means to show the system information. <MAC>: Enter the MAC address of the VigorSwitch.
<i>iftbl</i> <MAC> <port_num>	It means to show port interface information. <MAC>: Enter the MAC address of the VigorSwitch. <port_num>: Enter the index number (e.g., 1 to 28) of the VigorSwitch LAN port. The number of LAN ports will vary according to the Switch to be modified.
<i>poe</i> <MAC>	It means to show snmp POE interface information. <MAC>: Enter the MAC address of the VigorSwitch.
<i>trpcom show</i> <MAC>	It means to show Trap Community. <MAC>: Enter the MAC address of the VigorSwitch.
<i>trpcom set</i> <MAC> <name>	It means to set Trap Community. <MAC>: Enter the MAC address of the VigorSwitch. <name>: Enter a string as tramp community.

Example

```

> swm snmp sys 001daa0ccd08
sysDescr:
sysObjectID:
sysUpTime:0 hr 0 m 0 s
sysContact:
sysName:
sysLocation:
sysServices:0
ifNumber:0
> swm snmp trpcom show 001daa0ccd08
Trap Community:public
>

```

Telnet Command: service

This command is used to display information about Myvigor service. In addition, it allows to transfer MyVigor service from the original account to other account.

Syntax

service -s

service -r

service -l <account><password>

service -i <new_owner><new_owner_email>

service -t <yes>/<no>

service -c

Syntax Description

Parameter	Description
-s	Display the service status.
-r	Refresh the service status
-l <account><password>	Login to MyVigor server. Enter the account and password registered to MyVigor server account - Enter the name of the account. Password - Enter the password of the account.
-i <new_owner><new_owner_email>	Enter the name and the e-mail address of the new owner for service transfer. New_owner - Enter the account name of the new owner. New_owner_email - Enter the e-mail address of the new owner.
-t <yes>/<no>	Transfer this Vigor device to a new owner.
-c	Clear current owner's account information.

Example

```
> service
> service -l carrieni ttt0016ttt5
Login Account:carrieni, Pw:ttt0016ttt5
Login Success! Please check Service Status again!
> service -s
Show service status.
Now state is [SS_STATE_REG_ACC_VALID]
