

AtomSSD™ User Guide

Rugged Portable Solid State
USB C (3.1 Gen2) Drive

Unpacking Your Atom SSD

Your Glyph Atom SSD and accessories are packaged in a sturdy shipping container. Please inspect the container for evidence of shipping damage and mishandling. If the container is damaged, file a report with the carrier or dealer immediately. Do not attempt to unpack and operate your Atom SSD until the carrier or dealer confirms the damage. If the container is in good condition, proceed with unpacking your Atom SSD. Verify that all the items described in the next section are present and in good condition. If any of the items you expect to find in your container is missing or damaged, contact the dealer before proceeding any further. In any case, do keep the shipping container and all packing materials in a safe place.

Atom SSD package includes:

Atom SSD Enclosure with Silicone Protective cover

Glyph USB-C (3.1 Gen2) to USB-C (3.1 Gen2) cable

Glyph USB-C (3.1 Gen2) to USB-3.0 cable (not compatible with USB 2.0)

Note: No external power adapter is required to operate Atom SSD

Use the included USB cable to connect Atom SSD to your computer. Atom SSD comes pre-formatted for Mac and is ready for use out of the box. If you plan to use Atom SSD with Microsoft Windows, please follow the instructions below for formatting with Windows computers. To use Atom SSD with your computer, you need:

- A Mac or PC with a USB C or USB 3.0 port, and one of the following operating systems:
 - Mac OS X version 10.9 or later
 - Windows 7 or later

Getting Started

Connect Atom SSD to your computer

WARNING:

Always be sure to properly eject the drive from your desktop before physically unplugging Atom SSD from your computer. You can accomplish this by dragging Atom SSD icon to the trash in the dock, by selecting Atom SSD icon and pressing the "command" and "E" keys simultaneously, or by using Disk Utility application.

Windows Formatting Instructions (7 and above) once Atom SSD is connected

1. Right-click My Computer and click Manage.
 2. In the Computer Management window, under Storage, click Disk Management.
 3. In Disk Management, right click the Unallocated partition near the bottom of the window that corresponds to the capacity of Atom SSD (often Disk 1). Click "New Simple Volume" and the Write Signature Wizard pops up.
 4. Use the wizard to write a signature to the new drive. If you want only one partition we suggest using a primary partition and selecting the maximum size. In most cases you'll want to use NTFS volumes, this is the default for Windows 7. Ensure "Perform a Quick Format" is checked. Choose exFAT if you want to use the drives with older versions of Windows or if you want to use the drive with Windows and Mac OS.
 5. Formatting will take a few minutes after which your drive will be ready to use.
- Note - Formatting for Windows 8 and above is the same once you are in Disk Management.

Mac OS X 10.11 Formatting Instructions once Atom SSD is connected

(for older version levels, contact us or contact Apple)

Since your Atom SSD comes pre-formatted for Mac you don't need to format it on installation. If you decide to reformat or partition your drive at a later date, use Disk Utility (supplied with the Mac OS X operating system).

Caution: This procedure will destroy any data currently on the drive. Before formatting a drive, save any important data it contains.

1. Open Disk Utility:
 - Double click on your internal hard drive mounted on the desktop.
 - Open Applications Folder > Utilities Folder > double click on Disk
2. Select your Atom SSD drive from the list on the left. The top entry represents the device and the entry underneath it represents the volume associated with that device. Click on the Volume level.
3. Click on the Erase Tab.
4. Give the drive a name that will represent the volume.
5. Ensure that the format is "Mac OS Extended (Journaled)" from the drop down list.
6. Click the Erase button.
7. Affirm that you wish to erase this volume and reformat with the settings applied.
8. Formatting will take a few moments after which your drive is ready to use.

Warranty Information

3 Year Hardware Warranty

Your purchase of Atom SSD from an authorized Glyph reseller includes a three-year warranty. Glyph warrants that your Atom SSD is free from material and mechanical defects. Proof of purchase may be required to receive warranty service.

What is not covered?

Atom SSD warranty does not cover damage or accidental damage caused by misuse, modification, alteration, tampering, an unsuitable operating environment, improper care, or failure caused by another product for which Glyph is not responsible.

Atom SSD warranty does not include recovery of your data and is not eligible for Advance Replacement.

What is the warranty procedure?

1. Contact Glyph Technical Service (see below) and obtain an RMA (Return Merchandise Authorization) number.
2. Carefully pack and ship your Atom SSD to the address provided by the Glyph service representative. There is no need to include cables of any kind, just Atom SSD unit. Be sure the box is clearly labeled in several places with your RMA number.
