

RouterBOARD M33 series

First use

- Insert the miniPCIe and M.2 cards (not included) and secure them with the included screws. [Only one 802.11 wireless card can be used at once]. It is suggested to use the other slot for LTE modems.
- (Optional) Install the device in a case.
- Connect cables to wireless cards and ethernet ports.
- Plug in power cable (directly or through the PoE injector) to turn on the device.

Powering

The device accepts power with the following modes:

- Passive 11-30 V PoE to J1 ethernet port. Higher voltage needed to compensate for power loss on long cables. At least 18 V is suggested.
- Direct input to the power jack 11-30 V.

Max total power consumption with all interfaces loaded is 19 W. Maximum power to each extension card is 3 A.

Booting process

RouterOS is the operating system of all RouterBOARD routers. Please see documentation: <http://mt.lv/help>

This device is not preconfigured other than an IP address on the ethernet port. Other configuration has to be applied according to the documentation manual linked above.

Initial connection has to be done via the ethernet cable, using the MikroTik Winbox utility. Winbox should be used to connect to the default IP address of 192.168.88.1 with the username admin and no password.

In case you wish to boot the device from network, for example to use MikroTik Netinstall, hold the reset button of the device when starting it until the LED light turns off, and the device will start to look for Netinstall servers.

In case IP connection is not available, the Winbox utility can also be used to connect to the MAC address of the device. More information in the documentation.

Extension slots and ports

- Three gigabit ethernet ports (With Auto MDI/X so you can use either straight or cross-over cables for connecting to other network devices). The J1 (first from the left) ethernet port accepts 11-30 V DC powering from a passive PoE injector.
- Two miniPCIe slots for either a 802.11 wireless card, or a 3G/LTE modem. Mini SIM 2FF slots available for miniPCIe 3G/LTE modems and have no functionality when a modem is not installed.
- One M.2 (M key) slot for PCI-e SSD disk or other devices. The mounting hole is for 2242 size cards, for other sizes, an extender is suggested. Any speed M.2 cards will operate at 1x PCIe speed.
- One microSD slot for a storage card.
- One DB9 RS232 serial port for serial console access. Configured as 115200 bit/s, 8 data bits, 1 stop bit, no parity.

Buttons and jumpers

RouterBOOT reset button. This button has the following functions:

- Hold this button during boot time until LED light starts flashing, release the button to reset RouterOS configuration (total 5 seconds).
- Keep holding for 5 more seconds, LED turns solid, release now to turn on CAPs mode (total 10 seconds).
- Keep holding the button for 5 more seconds until until LED turns off, then release it to make the RouterBOARD look for Netinstall servers (total 15 seconds).

Regardless of the above option used, the system will load the backup RouterBOOT loader if the button is pressed before power is applied to the device. Useful for RouterBOOT debugging and recovery.

USB jumper. Located right next to the USB 3.0 port. When loaded, the jumper enables the USB 3.0 port. Remove the jumper to switch the USB 2.0 lines to the J10 (central) miniPCIe slot (USB 3.0 lines remain enabled to the USB port). This is required if you need to use two cellular modems in the device. Normally you can use the LTE modem in the J8 (left hand side) slot, and use a 802.11 wireless card in the J10 slot. In this case, you can leave the jumper on, as most wireless cards operate on PCI express. Removing the jumper enables use of a secondary cellular modem in the central J10 slot, but disables the USB 2.0 functionality of the USB port, while USB 3.0 can still be used on the USB port. Refer to the diagram below,

Boot configuration jumpers. More options will be added later, below is default jumper configuration for MikroTik RouterOS boot.

Operating system support

The device only supports RouterOS software with the version number at or above what is indicated in the RouterOS menu `/system resource`. Other operating systems have not been tested.
