Instruction Manual

Thank you for purchasing the 14mm F2 8 FD AS IF LIMC lens We believe that you will have a special photographic experience with the 14mm F2.8 FD AS IF UMC lens.

Advantages of the 14mm F2.8 ED AS IF UMC lens

- 1. It compensates for aberrations by using a complex aspherical and glass aspherical lens and, at the fully opened position, produces high resolution and high contrast at the center of the lens as well as around the periphery 2. Controls chromatic aberration optimally by using premium optical glass with high
- refraction and extra-low dispersion. 3. Allows precision focus control by providing a soft and wide focus operation area. 4. Ultra multi coating design for optimum suppression of ghost images and vivid color
- image reproduction. 5. Maintains an unchanged size with its inner focus design.

This product is designed with its own mount so you can easily take photographs by mounting the lens directly onto the camera, without installing an additional adaptor

Read this manual carefully to familiarize yourself with your lens for correct use. * Please read the Safety Precautions at the back of this instruction manual prior to use.

Please read this instruction manual prior to use.

Hold the lens hood gently and press the lens release button on the camera. Turn the lens in the opposite direction of the attaching direction to detach the lens.

3. Focus Adjustment

You can adjust the focus by turning the focusing ring when using the 14mm F2.8 ED AS IF UMC lens, as it is a Manual Focus (MF) adjustment lens.

[Nikon (Fujifilm) F / Pentax (Samsung GX) K Mount]

- turn the focusing ring to the left (∞ to 0.28 m) and focus on the clearest subject by using the indication signal on the camera, or by checking visually.
- ② To change the focus from a subject that is close to a subject that is far away,

[Sony \mathcal{Q} , E / Canon, Canon M / FT, MFT / Fujifilm X / Samsung NX Mount]

- ① To change the focus from a subject that is far away to a subject that is close, turn the focusing ring to the right (∞ to 0.28 m) and focus on the clearest
- ② To change the focus from a subject that is close to a subject that is far away. turn the focusing ring to the left (0.28 m to ∞) and focus on the clearest subject

4. Brightness Control

You can set the depth of field and brightness by turning the aperture adjustment ring when using the 14mm F2.8 ED AS IF UMC lens.

Nikon AE and Canon AE version lenses can set an aperture value at the cameras.

The 14mm F2.8 ED AS IF UMC lens is a wide-angle lens and captures a vivid wide angle of view by minimizing image distortion. You can capture extensive panoramas,

2. Attaching and Detaching

The 14mm F2.8 ED AS IF UMC lens mount is uniquely designed for Canon, Nikon (Fujifilm) F, Pentax (Samsung GX) K, Sony α (Minolta), Canon M, Sony E, Fujifilm X, Samsung NX, Four Thirds, and Micro Four Thirds cameras.

[Attaching]

Hold the lens hood gently and align the camera mount attachment point with the attachment reference point or line on the lens. Push the lens into the camera and gently rotate the lens in the attachment direction until it makes a clicking sound.

• If there are foreign bodies on the lens, use a lens cleaning kit only. • Do not soak the lens in water, and avoid water splashing onto the lens. Avoid dropping the lens. systb objects. • Do not touch the surface of the lens by hand, and avoid making contact with • Do not leave the lens in conditions where drastic temperature changes can heaters, thermal regulators, stoves or stereo amplifiers.

 Do not use this product or store it close to devices that generate heat i.e. CAUTION! TILE OF EIECTFIC SNOCK. Do not wet this product or expose it to a moist environment. It may cause a

9. Safety Precautions

[Detaching]

- ① To change the focus from a subject that is far away to a subject that is close,
- turn the focusing ring to the right (0.28 m to ∞) and focus on the clearest subject by using the indication signal on the camera, or by checking visually.

- subject by using the indication signal on the camera, or by checking visually.
- by using the indication signal on the camera, or by checking visually.

The F numbers can be set from 2.8 to 22.

5. About Photography

which is very useful for landscape shooting.

6. Camera Settings

Some cameras require special settings when using this lens. Please refer to the following and set the camera when necessary.

The diaphragm of the 14mm F2.8 ED AS IF UMC Canon mount is not compatible with

If the brightness is set to F8 or above, you may not be able to set the correct focus due to a difficulty in viewing the subject through the camera viewfinder. Turn the aperture adjustment ring so it is fully open when attaching the lens to the camera, and then set the depth of field and brightness you want prior to shooting. The lens that does not have a point of contact

1) Set the camera mode dial to M

2) Adjust the shutter speed to achieve the appropriate exposure for the

* For some Canon cameras, if you set the camera mode dial to Av and set the brightness by turning the aperture adjustment ring on the lens, the camera automatically changes the shutter speed. Therefore you don't need to adjust the shutter speed as well, which is required in M mode.

(The procedures above are for the 40D. The settings for the camera or the menu may vary based on the model or due to a functional upgrade. Refer to the camera instruction manual or contact the camera manufacturer for detailed information.)

The lens that has a point of contact

← cwλk
 → akkink

A drive motor of aperture that inside of the lens makes cameras can control the aperture value. It measures an exposure automatically by communication between camera and lens and it helps to obtain optimum exposure value. (It can be set manually at M mode) (Regarding additional information about each mode of the cameras, please refer to the user manual or ask it to manufacturer of cameras)

O Nikon (Fujifilm) Mount

Your Nikon mount has electronic contacts that allow it to communicate with Nikon AF cameras. These contacts enable the A, S, and P modes of the camera. When a subject is correctly in focus, the camera emits a beep or an indicator light comes on.

O Pentax (Samsung GX) K Mount

The 14mm F2.8 ED AS IF UMC Pentax (Samsung GX) K Mount supports Av mode

1) Align the A mode indicator to the distance scale indicator mark by pressing the A button on the aperture adjustment ring of the lens.

2) Set the mode dial of the camera to Av.

3) Set the focus adjustment lever of the camera to MF.

4) Camera Settings The user sets the menu. ▶ The aperture ring is used. ▶ Not allowed.

5) Adjust the brightness by turning the dial at the back of the camera.

(The procedures above are for the K20D. The settings for the camera or the menu may vary based on the model or due to a functional upgrade. Refer to the camera instruction manual or contact the camera manufacturer for detailed information.)

\bigcirc Sony (Minolta) lpha Mount

The diaphragm of the 14mm F2.8 ED AS IF UMC Sony (Minolta) mount is not compatible with the camera. If the brightness is set to F8 or above, you may not be able to set the correct focus due to a difficulty in viewing the subject through the camera viewfinder. Turn the aperture adjustment ring so it is fully open when attaching the lens to the camera, and then set the depth of field and brightness you want prior to shooting.

1) Set the camera mode dial to M.

2) Set the focus adjustment lever of the camera to MF

3) Adjust the shutter speed to achieve the appropriate exposure for the
